STATISTICAL BULLETIN

CHATER I

INTRODUCTION

1.1 Overview

The level and distribution of poverty in Ethiopia is extensive. According to the results obtained from the 1995/96 and the 1999/2000 Household Income, Consumption and Expenditure Survey and Welfare Monitoring Survey of the Central Statistical Authority (CSA), about 44 percent of the total populations (45 percent in rural areas and 37 percent in urban areas) are found to be below poverty line. The country together with development partners, as a result, has put poverty reduction strategies high on the agenda and working firmly on the implementation program since the beginning of this decade. With firm dedication to reduce poverty, the government has prepared its poverty reduction program entitled “Sustainable Development and Poverty Reduction Program” in 2002. The strategy has been implemented over the past three years.

In light of the plan to reduce poverty over time, strong system of monitoring and evaluation has been put in place. Consequently, the issue of welfare monitoring in Ethiopia arose as part of the Economic Reform Program (ERP). The ERP specifically and strongly underlies to see the effects of the reform program on poverty and building the analytical capacity of the government to monitor and evaluate such effects. To this end, the government has established a Welfare Monitoring System in 1995 to oversight the following major activities:

- establish an information system that provides a continuous picture of the poverty scenario in the country;
- indicate the impact of reform programs on the level of household welfare;
- establish follow-up procedures on the various programs and activities targeted towards poverty reduction; and
- conduct regular statistical surveys to assess, in particular, the efficiency of targeted programs.

The CSA and WMU of Ministry of Finance and Economic Development (MoFED) has been the key actors in the M&E system in place by way of producing, analyzing and disseminating poverty related data and results. The program has been supported by the World Bank IDA Credit and the Norwegian Trust Fund.

In line with strengthening the established M&E system of the government, the CSA and WMU of MoFED had also submitted a financing requirement proposal (entitled: Strengthening Data Collection, Analysis and Dissemination on Poverty Monitoring and the MDGs) to the Development Assistant Group (DAG). Following the signing of the Memorandum of Understanding (MOU) between MoFED, CSA and the donors, various implementation activities have also been carried out.

In order to meet the data needs of the Welfare Monitoring System, the CSA has been conducting the two surveys that provide poverty related data: Household Income, Consumption and Expenditure Survey (HICES) and Welfare Monitoring Survey (WMS) since 1995/96. The HICE and WMS surveys provide crucially useful information for the designing and monitoring and evaluation of the country's poverty reduction strategy: Sustainable Development and Poverty Reduction Program (SDPRP), the various socioeconomic policies and programs and hence monitor the progress towards meeting the Millennium Development Goals (MDGs). The two surveys are inseparable and provide basic data that reflect the standard of living of households, individuals and the society as a whole.

HICES basically reflects the income dimension of poverty while WMS aims at providing socioeconomic data that reflect the non-income dimension of poverty. The HICE provides statistics on income, consumption and expenditure of households and WMS provides basic indicators on the various socioeconomic areas including health, education, nutrition, access to and utilization and satisfaction of basic facilities/services and related non-income aspects of poverty. The WMS has been conducted together with the HICES in 1995/96 and 1999/2000 and had also been carried out in 1997 and 1998.

Several reports have been produced based on the previous surveys including the statistical reports produced by the CSA. These are report on the 1995/96 HICES and WMS, report on the 1999/2000 HICES and WMS, summary reports for the 1999/2000 HICE and WMS and report on the 1998 WMS survey as well as the two in-depth analytical reports on poverty situation of the country produced by Ministry of Finance and Economic Development (MoFED).

The WMS focuses on wider range of socioeconomic indicators that reflect the non-income dimensions of poverty. The 2004 survey have been improved to accommodate users needs as much as possible. New features in the current survey include shocks and coping mechanisms, HIV/AIDS related information, estimates of orphan and foster children, major prevailing diseases, plot size and other additional variables.

This report is one of the volumes, which shows detailed statistical tables at country and regional levels compiled for urban and rural areas. Chapter I highlight some background remarks on the survey, while Chapter II deals with survey methodology followed by Statistical tables on Basic population Characteristics, Education and related indicators, Health and Health Related indicators followed by Nutritional status and child care and health. The estimation procedure, standard errors and coefficient of variation, regional distribution of the sample EA's, and the Questionnaire are also displayed in the Annex.

Two Reports that comprise survey results at country, rural and urban levels are presented on separate volumes. The first analytical report provides findings on major welfare indicators and constitutes 10 chapters with a brief description, while the second one presents statistical tables on Accessibility to Basic Facilities, Household Assets, Indicators on Food Security and Knowledge about HIV/AIDS. Furthermore, statistical tables that show data at country, regional, zone levels and selected urban centers are provided in a CD for references.

1.2 Objectives of the Welfare Monitoring Survey

The main objectives of the WMS are to provide data that enable understand the *non-income aspects of poverty* and has the following objectives:

- to assess the level, extent and distribution of non-income poverty;
- helps assess the quality of life of households/individuals;
- to provide basic data that enables design, monitor and evaluate the impact of socioeconomic policies and programs on households/individuals living standard;
- provide basic indicators on households' and individuals' living standard with respect to basic needs including
 - ✓ Education, Health, Child nutrition and care, Access to and utilization of basic facilities, Housing and housing amenities (drinking water, sanitation, energy, etc.), Household assets, Selected indicators of living standard, Vulnerability (Shocks and coping mechanisms, Food security, etc.), and HIV/AIDS and basic population characteristics.

1.3 Training, Fieldwork and Supervision

Training of Field staff

Training was held in two stages. The first stage was training of trainers and was conducted at the CSA Head Office. A total of 140 participants including professionals and sub-professionals from the Head Office, heads of the branch offices and the respective statisticians from each branch office were trained at this stage. The second stage training involved training of about 4600 field staff consisting of about 3900 enumerators and more than 700 supervisors and was conducted at all branch offices of the CSA.

The training at the head office lasted for about 10 days focusing on theoretical discussions on concepts, definitions, and principles of interview and how to complete questionnaires the training also had focused in practical sessions which include mock

interviews and two-days field practice both in rural and urban areas. The objectives of practical interviewing of households were two fold. First, it enabled to assess how well the theoretical class discussions were understood by all participants so that they could convey the same message to enumerators and supervisors. The second objective was to examine the practical difficulties pertaining to the various socioeconomic groups, which would likely be encountered during the actual fieldwork.

The second stage training was undertaken at the branch offices and took about 12 days. The training was more detailed than the first stage in both theoretical and practical aspects to ensure the full competence of the field staff in collecting the required information. The trainers were professional and sub-professional staffs that were trained at the head office.

Field Organization, Data Collection and Supervision

The CSA branch offices led by the Field Operations Department at the Head Office did the major work of the field organization. All the 25 branch offices of the CSA (Excluding Gambela) had fully participated in the survey undertaking, starting from recruitment of field staff, organizing the second stage training, in deploying the field staff to their respective sites of assignment, field supervision and retrieval of the completed questionnaires to the head office where the data processing activities take place. They were also responsible for administering financial and logistics aspects of the survey. Additionally, line government organizations especially Kebele's had also a significant role in facilitating the fieldwork. Writing administrative letters that introduce the work and the enumerators to the local people particularly the sample households, provision of field guides, etc were tasks of the local government units.

WMS data collection has taken place from 24 June to 3 July 2004. A total of 3873 enumerators and 708 field supervisors with an average supervisor-enumerator ratio of 1 to 5 together with about 75 technical staff from the branch offices were involved in the field work. Nearly 196 four-wheel-drive vehicles were deployed all over the country to undertake the fieldwork (see Summary Table 1.1).

Both interview and objective measurements were introduced to collect data from households and individuals. Interview method was used to gather information related to population characteristics, education, health, household based modules such as accessibility of facilities, household amenities, etc. Objective method was used in assessment of child nutritional status. Which involves anthropometric measurements (weight and height measurements) of the under five children.. Information was collected using questionnaires having nine modules following both subjective and objective methods of data collection.

A regular supervision, which also is compulsory activity in CSA surveys, was undertaken at various levels to ensure the quality of the data. The permanent field supervisors were assigned to take care of the day-to-day supervision activities. Branch office statisticians and heads of the branch offices were also involved in a regular supervision. Most of the professionals and sub professionals that were engaged in training the field staff were also deployed on the actual field supervision. Management group from the head office has also made a field visit to oversight the operation as whole.

1.4 Data Processing

The data processing activities were undertaken at the head office. The first stage of data processing activities was training of data editors and coders which was held at the head office by subject matter department staff. About 55 editors/coders and 39 verifiers were engaged in the manual editing, coding and verification activities, which lasted for about 36 days. Data entry took about 37 days using 125 computers and as many data encoders.

Machine data cleaning, estimation with proper sampling weights and tabulation activities were carried out procedurally by the professional staff from involved departments at the head office. The Integrated Microcomputer Processing System (IMPS) complemented by CSPRO software were used for data entry, consistency checks and tabulation of survey results.

**Summary Table I.1: Distribution of Field staff and Vehicles by Branch Statistical
Office – 2004**

<i>Branch Office</i>	<i>Enumerators</i>	<i>Supervisors</i>	<i>Vehicles</i>
<i>Addis Ababa</i>	501	81	13
<i>Ambo</i>	139	26	9
<i>Arbaminch</i>	165	33	9
<i>Asebe Teferrie</i>	72	14	7
<i>Assosa</i>	110	19	6
<i>Awassa</i>	205	40	9
<i>Asayita</i>	137	23	5
<i>Bahir Dar</i>	265	49	9
<i>Debre Berhan</i>	111	22	9
<i>Dessie</i>	209	39	11
<i>Dire Dawa</i>	144	24	6
<i>Goba</i>	63	12	7
<i>Gondar</i>	161	29	8
<i>Harar</i>	131	21	6
<i>Hossaena</i>	195	38	10
<i>Jijiga</i>	106	18	4
<i>Jimma</i>	183	34	12
<i>Mekelle</i>	209	38	9

CHAPTER II

SURVEY METHODOLOGY

2.1 Coverage

The year 2004 Welfare Monitoring Survey covered all rural and urban area of the country except the non-sedentary areas in Afar and Somali Regional States. Excluded are three zones of Afar Region, six zones of Somali Region and all zones of Gambella Region. In the rural part of the country it was planned to cover 2,016 enumeration areas (EAs) and 24,192 households.

The response rate is highly satisfactory. Only two EAs and 39 households (owing to various reasons) were not covered in this survey. The ultimate response rate in rural areas is, therefore, 99.9 percent for EAs and 99.8 percent for households. Regarding urban parts of the country all the planned 760 EAs (100 percent) and 99.9 percent of the 12,160 planned sample households were successfully covered in the survey.

2.2 Concepts and Definitions

URBAN CENTER: in principle is defined as a locality with 2000 or more inhabitants. In this survey, however, for practical purposes an urban center includes the following regardless of the number of inhabitants.

- i) All administrative capitals (Regional capitals, Zonal capitals and Wereda capitals),
- ii) Localities with Urban Dweller's Association (UDAs) not included in (i),
- iii) All localities which are not included either in (i) or (ii) above having a population of 1000 or more persons, and whose inhabitants are primarily engaged in non- agricultural activities.

URBAN DWELLER'S ASSOCIATION, UDA, (KEBELE): is the lowest administrative unit in an urban center with its own jurisdiction. It is an association of urban dwellers (commonly known as Kebele) formed by the inhabitants, and usually constitutes a part of the urban center.

FARMER'S ASSOCIATION (FA): is the lowest administrative unit in a settled rural area with its own jurisdiction. It is an association of rural dwellers formed by the inhabitants of a given area whose members are engaged either in agricultural and/or non-agricultural activities.

ENUMERATION AREA (EA): is a unit of land delineated for the purpose of enumeration housing units and population without omission and duplication. An EA usually consists of 150 to 200 households in rural areas and 150 to 200 housing units in urban areas. An enumeration area should be related to a UDA or an FA in one of the following ways.

- An EA may be equal to an FA if the number of the households in the FA is less than or equal to 150 – 200 in rural areas; and is equal to a UDA in urban areas if the number of housing units in the UDA is 150 – 200.
- An EA may be a part of an FA or a UDA and its delineation can not extend outside the boundary of the corresponding FA or a UDA.

COLLECTIVE QUARTER: A collective quarter is a premise (a housing unit, a building or a compound) in which a number of unrelated persons reside together, and share common facilities. Examples of collective quarters are monasteries, prisons, boarding schools, home for aged, children's homes, work camps, military barracks, etc. It is important to note that in the premises of some collective quarters, there may be private households.

HOUSEHOLD: Constitutes of a person or group of persons, irrespective of weather related or not who normally live together in the same housing unit or group of housing units and who have common cooking arrangements.

HEAD OF HOUSEHOLD: A head of a household is a person who economically supports or manages the household or for reasons of age or respect, is considered as head by members of the household or declares himself as head of a household. Head of a household could be male or female.

MEMBER OF HOUSEHOLD: Person constituting a household is called member of the household. The following are considered as members of a household:

- i) All persons who lived and ate with the household for at least six months including those who were not within the household at the time of the survey and were expected to be absent from the household for less than six months.
- ii) All guests and visitors who ate and stayed with the household for six months and more.
- iii) House maids, guards, baby-sitters, etc. who lived and ate with the household even for less than six months.

HOUSEHOLD SIZE: Is the total number of members of a household.

DOMESTIC EXPENDITURE: is defined as total expenditure incurred by the household or any of its members and includes expenditure on consumption as well as non-consumption items.

INCOME: Refers to domestic consumption of own crops and own livestock and livestock products, domestic consumption of goods and services purchased for resale or produced or processed in the household enterprise other than agriculture, wages and salaries, allowance, overtime, bonus, pension, commission, discounts (i.e. concessions obtained), imputed rent of free housing (i.e. subsidized amount only), imputed rent of owner occupied housing, other employee's benefit, interest received, profit and dividend received, remittance (regularly received), value of items obtained free (i.e. firewood, water, etc.), rent of personal possessions, alimony (regularly received) and other types of income.

GROSS ENROLLMENT RATIO: is the total enrolment in a given level of school, regardless of age, per 100 children of that school age. For example, the gross enrolment ratio for primary level is defined as a quotient of the total number of pupils in grades 1–6 and the total population aged 7-12 years expressed as percentages.

SCHOOL DROPOUT: A person is considered to be a school dropout if he/she did not appear for the end of year examination or took the examination but did not register the following academic year.

AGE GRADE MISMATCH: is a measure of the age-grade slippage which gives the proportion /number of enrolled persons that are out of school age specified for each level of school (7-12 years for primary and 13-18 years for secondary).

FACILITIES AND AMENITIES: These are basic infrastructures such as food, markets, postal, telephone, school, health, drinking water and transport services etc.

ANTHROPOMETRY: The technique that deals with the measurement of the size, weight and proportions of human body.

ACUTE MALNUTRITION OR WASTING: is a condition of low weight-for-height. Wasting is nutritionally deficient state of recent onset related to sudden food deprivation or malabsorption or poor utilization of nutrients, which results in rapid weight loss.

CHRONIC MALNUTRITION OR STUNTING: is a condition of low height-for-age. Stunting is a nutritional deficient state of long-term food deficiency often combined with persistent ill health.

UNDER WEIGHT: A condition of low weight-for-age. It is a composite index of malnutrition (either acute or chronic malnutrition) based on the principal that a child has an expected weight for that child's age.

Z-SCORE: A statistical measure of the distance, in standard deviation (SD) units, of a value from the mean.

VACCINATION: Any incurable immunizing agent or a preparation containing bacteria so treated as to give immunity from specific diseases when injected in to the subject.

2.3 Sampling Frame

The list of all households obtained from the 2001/02 Ethiopian Agricultural Sample Enumeration (EASE) is used as a frame to select the sample EAs in the rural areas of the country. In urban areas, on the other hand, the frame, consisting of households by EA obtained from the 2004 Ethiopian Urban Economic Establishment Census (EUEEC), is used to select sample sites for the 2004 welfare monitoring survey. The frame from which sample households were selected was based on a fresh list of households taken at the beginning of the survey period in each of the selected urban and rural EAs.

2.4 Sample Design

For the purpose of the survey the country was divided into three broad categories including rural category, major urban centers category and other urban centers category.

Category I - Rural: This category consists of the rural areas of 58 zones and special Weredas, which are considered as zones, in 7 regions of the country. Harari region and Addis Ababa City Council and Dire Dawa City council were treated independently. Each zone/special Wereda of a region was considered to be a survey domain (i.e. reporting level) for which the major findings of the survey are reported. Rural Harari, Addis Ababa and Dire Dawa each were considered as separate reporting levels.

Category I totally comprises 61 reporting levels. A stratified two-stage cluster sample design in which the primary sampling units (PSUs) were EAs was used to select samples. Twelve households per sample EA were selected as a second Stage Sampling Unit (SSU) to which survey questionnaire finally were administered to the members of sample households.

Category II - Major urban centers: In this category all regional capitals (except Gambella region) and four other major urban centers that have relatively larger

population sizes were included. Each of the 14 urban center in this category is taken as a reporting level. Since there is a high variation in the standards of living of the residents of these urban centers (that may have a significant impact on the final results of the survey), each urban center was further stratified into the following three sub-strata.

- Sub-stratum 1: Households having a relatively high standard of living
- Sub-stratum 2: Households having a relatively medium standard of living
- Sub-stratum 3: Households having a relatively low standard of living

In this category too, a stratified two-stage cluster sample design was adopted to select the primary sampling units (the EAs) and the Second Stage Unit. Allocation of sample EAs to a reporting level among the above mentioned strata were accomplished in proportion to the number of EAs in each stratum. Sixteen households from each of the primary sampling units (EAs) in each reporting level were then selected as a Second Stage Unit (SSU).

Category III - Other urban centers: Urban centers in the country other than those under category II were grouped under this category. A domain of other urban centers is formed for each region (excluding Gambella region) and seven reporting levels were formed in this category. However, there is no domain in category III for Harari, Addis Ababa and Dire Dawa as they do not have urban centers other than those grouped under category II.

Unlike the above two categories, a stratified three stage cluster sample design was adopted to select samples from this category. The primary sampling units were urban centers and the second stage sampling units were EAs. Sixteen households from each of the selected EAs were finally selected as a third stage sampling unit.

2.5 Sample Size and Selection Scheme

Category I: A totally of 2,016 EAs and 24,192 households were selected from this category. Sample EAs of each reporting level were selected using Probability Proportional to Size (PPS) with systematic sampling techniques; size being number of household obtained from the 2001/2 Ethiopian Agricultural Sample Enumeration. Twelve households per EA were systematically selected from the fresh list of households prepared at the beginning of the survey.

Category II: In this category 485 EAs and 7,760 households were selected. Sample EAs from each reporting level in this category were also selected using probability proportional to size systematic sampling; size being number of households obtained from the 2004 EUEEC. Sixteen households in each of the selected EAs were systematically selected from the fresh list of households prepared at the beginning of the survey.

Category III: One hundred twenty-seven urban centers, 275 EAs and 4,400 households were selected in this category. Urban centers from each domain as well as EAs in each urban center were selected systematically using probability proportional to size; size being the number of households obtained from the 2004 EUEEC. Sixteen households in each of the selected EAs ultimately were systematically selected from the fresh list of households prepared at the beginning of the survey.

In total, including region rural, region urban and country domains, a total of 148 reporting levels were formed under this design. Annex IV provides distribution of planned and covered samples by region. Estimation procedures and standard errors & coefficients of variations for the estimates of selected variables are also presented in Annex II & Annex III, respectively of this report.

ANNEX I

ESTIMATION PROCEDURES OF TOTALS, RATIOS AND SAMPLING ERRORS

ANNEX I Estimation Procedures of Total, Ratio and Sampling Errors

The following formulas were used to estimate the required variables by reporting levels.

1. Estimate of Total \hat{Y}_h in Rural Domain (Category I)

$$\hat{Y}_h = \sum_{i=1}^{n_h} \frac{M_h H_{hi}}{n_h M_{hi} h_{hi}} \sum_{j=1}^{h_{hi}} Y_{hij} = \sum_{i=1}^{n_h} \sum_{j=1}^{h_{hi}} W_{hi} Y_{hij} \text{-----} \quad (1)$$

Where,

$$W_{hi} = \frac{M_h H_{hi}}{n_h M_{hi} h_{hi}} \text{ is the basic sampling weight}$$

2. Estimate of Total \hat{Y}_h in Major Urban Domain (Category II)

$$\hat{Y}_h = \sum_{a=1}^3 \sum_{i=1}^{n_{aih}} \sum_{j=1}^{h_{hai}} W_{hai} Y_{haij} \text{-----} \quad (2)$$

Where,

$$W_{hai} = \frac{M_{ha} H_{hai}}{n_{ha} M_{hai} h_{hai}} \text{ is the basic sampling weight}$$

3. Estimate of Total \hat{Y}_h in Other Urban Domain (Category III)

$$\begin{aligned} \hat{Y}_h &= \sum_{i=1}^{n_h} \frac{M_h}{n_h n_{hi}} \sum_{j=1}^{n_{hi}} \frac{H_{hij}}{M_{hij} h_{hij}} \sum_{k=1}^{h_{hij}} Y_{hijk} \text{-----} \quad (3) \\ &= \sum_{i=1}^{n_h} \sum_{j=1}^{n_{hi}} \sum_{k=1}^{h_{hij}} W_{hij} Y_{hijk} \end{aligned}$$

Where,

$$W_{hij} = \frac{M_h H_{ij}}{n_h n_{hi} M_{hij} h_{hij}} \text{ is basic sampling weight}$$

The following notations were used in the formula:

M_h = Total number of households in stratum h obtained from the sampling frame.

M_{hi} = Total number of households in EA/PSU i for rural and urban domain or in urban center/PSU i for other urban domain, stratum h obtained from the sampling frame.

n_h = Number of successfully covered sample EAs for rural domain in stratum h.

H_{hi} = Total number of households obtained from the survey listing in sample EA/PSU i stratum h for rural domains.

h_{hi} = Total number of households successfully covered in EA/PSU i stratum h for rural domain.

M_{ha} = Total adjusted number of households of the domain in substrata a and stratum h obtained from the sampling frame

H_{hai} = Total number of households obtained from the survey listing in EA/PSU i of substratum a and stratum h

n_{ha} = Number of successfully covered sample EAs/PSUs for major urban domain in substratum a and stratum h

M_{hai} = Total number of households in EA/PSU i in substratum a and stratum h obtained from the sampling frame

h_{hai} = Total number of sampled and covered households in sampled EA/PSU i, substratum a and stratum h

\hat{Y}_{haij} = The observed value of characteristic y for household j, in EA/PSU i, substratum a and stratum h of Major Urban Domain

M_{hij} = Total number of households in EA/SSU j, urban centers/PSU i and stratum h obtained from the sampling frame for other urban center domain.

n_{hi} = Number of sample EAs successfully covered in urban center/PSU i and stratum h for other urban center domain.

H_{hij} = Total number of households obtained from the survey listing in EA/SSU j, urban center/PSU i and stratum h for other urban center domain

h_{hij} = Number of sample households successfully covered in EA /SSU j, urban center/PSU i and stratum h for other urban center domain.

Y_{hij} = The observed value of a characteristic y for household j in sampled EA/PSU i and stratum h for rural domain.

Y_{hijk} = The observed value of a characteristic y for household k in EA/SSUj, urban center/PSU i and stratum h for other urban domain.

Note: Estimate of total at country level, \hat{Y} , is obtained by summing up stratum/domain total estimates.

$$\hat{Y} = \sum_{h=1} \hat{Y}_h$$

4. Sampling Variance of the Estimates:

Sampling variance of estimate of stratum total are given by the following formulas:

The variance of domain or reporting total estimate is:

$$V(\hat{Y}_h) = \frac{n_h}{n_h - 1} \left[\sum_{i=1}^{n_h} \hat{Y}_{hi}^2 - \frac{\hat{Y}_h^2}{n_h} \right] \text{-----} \quad (4)$$

in which $\hat{Y}_{hi} = W_{hi} \sum_{j=1}^{h_{hi}} Y_{hij}$ for rural and major urban centers domains,

and $\hat{Y}_{hi} = \sum_{j=1}^{n_{hi}} W_{hij} \sum_{k=1}^{h_{hij}} y_{hijk}$ for other urban center domain.

$$V(\hat{Y}) = \sum_h V(\hat{Y}_h) \text{-----} \quad (5)$$

$$SE(\hat{Y}_h) = \sqrt{Var(\hat{Y}_h)} \text{-----} \quad (6)$$

5. Coefficient of Variation (CV) and Confidence Interval (CI)

The following formulas were used to calculate CV and CI of the domain (reporting level) total.

The coefficient of variation (CV) of domain total in percentage is:

$$CV(\hat{Y}_h) = \frac{\sqrt{\widehat{VAR}(\hat{Y})}}{\hat{Y}} * 100 \text{ ----- (7)}$$

and Ninety-five percent confidence interval (CI) of domain total:

$$\hat{Y}_h \pm 1.96 * SE(\hat{Y}_h) \text{ ----- (8)}$$

6. Ratio Estimates:

$$\hat{R}_h = \frac{\hat{Y}_h}{\hat{X}_h} \text{ and } \hat{R} = \frac{\hat{Y}}{\hat{X}} \text{ ----- (9)}$$

Where the numerator and the denominator are estimates of domain totals of characteristic y and x, respectively.

$$Var(\hat{R}_h) = \frac{1}{\hat{X}_h^2} [Var(\hat{Y}_h) + \hat{R}_h^2 Var(\hat{X}_h) - 2\hat{R}_h Cov(\hat{Y}_h, \hat{X}_h)] \text{ ----- (10)}$$

In which

$$Cov(\hat{Y}_h, \hat{X}_h) = \frac{n_h}{n_h - 1} \left[\sum_{i=1}^{n_h} \hat{Y}_{hi} \hat{X}_{hi} - \frac{\hat{Y}_h \hat{X}_h}{n_h} \right] \text{ ----- (11)}$$

Estimates of standard error, coefficient of variation and confidence interval for the ratio estimate can be calculated by adopting formulas 6, 7 and 8.

ANNEX II

STANDARD ERRORS AND

COEFFICIENTS OF VARIATION OF

SELECTED VARIABLES

Table 3.2(a): Estimates of Standard Errors & Coefficients of Variations of the Estimates of Households by Household size, Gender of Household head and Region - Country Level - 2004

Region	Household size	Gender of Head of Household								
		Male			Female			Total		
		Estimate	SE	CV(%)	Estimate	SE	CV(%)	Estimate	SE	CV(%)
Country Total	1	277,261	14,239	5.1	436,899	15,996	3.7	714,161	21,367	3.0
	2	778,163	21,948	2.8	740,950	22,047	3.0	1,519,113	31,768	2.1
