Household Socio-Economic Survey 2009 (SES 2009)

Overview	
Type	Socio-Economic/Monitoring Survey [hh/sems]
Identification	THA-2009-SES-v01-M
Version	Version 01 - Dataset of the World Bank
Series	<p>The first Household Socio-Economic Survey was conducted by the National Statistical Office (NSO) in 1957, known as "The Household Expenditure Survey". This name was changed to the Household Socio-Economic Survey in 1968 - 1969 and the survey was conducted every five years. Due to the rapid economic expansion and the importance of the survey in order to set the anti-poverty policy, the Ministerial Cabinet had passed an approval on September 8, 1987 for the NSO to carry out the survey every two years. The 2009 survey is the twentieth survey of this kind. (The 1999 and 2001 surveys were conducted as special periodic survey by the cabinet assignment.)</p> <p>A stratified, three-stage sample design was adopted for the survey since 1975-76 until 1986. The primary and secondary sampling units were Amphoes and blocks (in municipal areas) or villages (non-municipal areas) respectively. The private households were the ultimate sampling units.</p> <p>Since 1988 onwards, a stratified two-stage sampling was adopted for the survey. The primary sampling units were blocks for municipal areas and were villages for non-municipal areas. The secondary sampling units were private households.</p>
Abstract The primary objective of the survey is collecting information on household income and household expenditures, household consumptions, changes in assets and liabilities, the durable goods ownerships, and housing characteristics including other living conditions of households.
