

Report No. 479(56/2.2/3)

# **Unorganised Manufacturing Sector in India 2000 - 2001**

## **Employment, Assets and Borrowings**

**NSS 56th round  
(July 2000 – June 2001)**

**National Sample Survey Organisation  
Ministry of Statistics and Programme Implementation  
Government of India**

**November 2002**

## *Preface*

*National Sample Survey Organisation (NSSO) conducted an integrated survey of households and unorganised manufacturing enterprises during July 2000 to June 2001. The subjects covered were consumer expenditure, employment and unemployment and unorganised manufacturing enterprises. This survey used the enterprise / establishment level data as per the Economic Census 1998 as the frame for sampling of villages / urban blocks, to the extent possible.*

*The present report is the third in a series of reports based on this survey on unorganised manufacturing enterprises. It contains information on employment, assets and borrowings GVA per workers, assets, loans etc. of the unorganised manufacturing enterprises at the all India level for different industry groups and at the level of state / UT' s for all the industry groups together.*

*Field Operations Division (FOD) of the organisation conducted the fieldwork of the survey and the data were processed and tabulated by the Data Processing Division (DPD) of the NSSO. Coordination and Publication Division (CPD) coordinated the overall survey activity. The Survey Design and Research Division (SDRD) of the NSSO developed the survey methodology and prepared the report. I am grateful to the members of the Governing Council of NSSO as well as members of the working group, and the editor of the report for their suggestions, which enhanced the quality of the report.*

*I hope the report will be useful to the planners and policy makers. Comments and suggestions for further improvement of such reports in future will be most welcome.*

*New Delhi  
November, 2002*

*Dr. S. Ray  
Director General & Chief Executive Officer  
National Sample Survey Organisation*

## Section One

### Introduction, Concepts and Definitions

**1.1 Introduction:** The importance of the unorganised sector and the need for statistical information about it had been realised by the Indian planners and policy makers in the 1950s. The National Sample Survey Organisation (NSSO) had covered the household-based non-agricultural activities in its surveys since 1950. In all the surveys, the relevant non-agricultural activities of a sample of households were covered irrespective of their scale of operations except for the manufacturing activities carried out by enterprises registered under Factories Act, 1948.

1.1.1 The early surveys of NSS used the household approach of identifying the units in the unorganised sector but excluded the non-household units. Later, a review of the surveys indicated that a better sampling frame was necessary to generate reasonably useful statistics on unorganised sector. The need for identifying areas with a concentration of enterprises was, therefore, felt for ensuring an efficient sampling design for the future surveys. A countrywide Economic Census, the first of its kind, was undertaken in 1977 under the auspices of the Central Statistical Organisation (CSO) to provide a better frame and background information needed for formulating an efficient sampling design.

1.1.2 The scope of the 1977 Economic Census was limited to non-agricultural enterprises employing at least one hired worker on a fairly regular basis. The enterprises employing at least one hired worker are called 'establishments'. Following this census, small establishments and enterprises not employing any hired worker on a fairly regular basis (these units are called Own Account Enterprises (OAEs)) engaged in manufacturing and repairing activities were surveyed in 33<sup>rd</sup> round of NSS during 1978-79.

1.1.3 The scope and coverage of the second Economic Census was enlarged to include the Own Account Enterprises (OAEs) engaged in activities other than crop production and plantation. The establishments were divided into two categories as (i) Directory Establishments (DEs) and (ii) Non-Directory Establishments (NDEs), the difference being that the former employed a total of six or more workers, while the latter employed a total of five or less workers. Thus, in all, three types of enterprises were formed, viz., (i) OAEs, (ii) NDEs and (iii) DEs in the second Economic Census. As a follow-up to the second Economic Census, OAEs and NDEs engaged in manufacturing and repairing activities were surveyed in the 40<sup>th</sup> and 45<sup>th</sup> rounds of NSS during July 1984-June 1985 and July 1989-June 1990 respectively. The DMEs were, however, surveyed during October 1984-September 1985 and October 1989 to September 1990 by field staff of NSSO under the technical guidance of CSO.

1.1.4 As a follow-up to the third Economic Census, the first integrated survey on unorganised manufacture covering Own Account Manufacturing and Repairing Enterprises (OAMEs), Non-Directory Manufacturing and Repairing Establishments (NDMEs) and Directory Manufacturing and Repairing Establishments (DMEs) was undertaken during the NSS 51<sup>st</sup> round (July 1994-June 1995) under the technical guidance of NSSO. In the 51<sup>st</sup> round, all manufacturing and repairing enterprises covered by the two-digit codes (called divisions) 20 to 39 and 97 under the

National Industrial Classification of different economic activities (NIC 1987) were covered under the survey.

1.1.5 A fourth Economic Census was conducted by CSO during 1998. As a follow up survey of this Economic Census, survey on unorganised manufacturing was conducted during 56<sup>th</sup> round (July 2000-June 2001). In this survey, information from 1998 Economic Census was used for stratification and list of villages and blocks was used as frame for selection of first stage units.

**1.2 The Survey in brief:** National Sample Survey Organisation (NSSO) conducted an integrated survey of enterprises and households in its 56<sup>th</sup> round during July 2000 to June 2001. The main focus of the survey was manufacturing enterprises in the unorganised sector. In addition, the survey also covered household consumer expenditure enquiry including some key characteristics on employment-unemployment. Information on characteristics of the enterprises, fixed assets, employment, operating expenses and receipts, value added, employment etc. was collected from the enterprises surveyed. This report presents results from the information collected from the manufacturing enterprises in the unorganised sector.

**1.2.1 Unorganised Manufacturing Sector:** The 56<sup>th</sup> round covered broadly all unorganised manufacturing enterprises under the two-digit codes 15 to 37 (Tabulation Category 'D' of NIC 1998) and enterprises under cotton ginning, cleaning and baling (NIC 98 code 01405). This survey excluded the following groups of enterprises:

manufacturing enterprise registered under sections 2m(i) and 2m(ii) of Factories Act, 1948, including enterprises engaged in cotton ginning, cleaning and baling covered under Annual Survey of Industries (ASI)  
but included enterprise manufacturing bidi and cigar not covered under Annual Survey of Industries (ASI) irrespective of their registration under Bidi and Cigar Workers( condition of employment) act,1966.

**1.2.2 Objective of the Survey:** The main aim of the survey on unorganised sector manufacturing enterprises was to estimate the total number of enterprises, workers, gross value added per worker and other related characteristics of enterprises.

**1.2.3 Coverage and sample size :** The survey covered the whole of the Indian Union except (i) Leh and Kargil districts of Jammu & Kashmir, (ii) villages situated beyond 5 Kms. of bus route in the state of Nagaland and (iii) inaccessible villages of Andaman and Nicobar and (iv) some first stage units (numbering less than 0.1% of the total) where Economic Census 1998 (EC 98) could not be conducted. Thus the corresponding State/U.T. level estimates and the All-India results presented in this report are based on the areas under survey coverage. A total of 14788 first stage units (5696 villages and 9092 urban blocks) were selected for this survey. The number of sample villages and blocks allotted for survey and actually surveyed in different states was as given in Statement 2 of Section Two.

**1.2.4 Sample Design:** A stratified sampling design was adopted for selection of the sample first-stage units (FSU s). The FSU s were villages (Panchayat wards in Kerala) in rural areas and UFS blocks in urban areas. List of villages / urban blocks along with enterprise level information of

EC 98 was used as the sampling frame except in the states of Bihar and Orissa and 66 towns of Karnataka (Also see Appendix B 2.1). The Ultimate Stage Units (USUs) were enterprises for the survey on unorganised sector manufacturing enterprises and households for consumer expenditure cum employment-unemployment survey. USUs were selected by the method of circular systematic sampling from the corresponding frame in the FSU. Large FSUs were subdivided into smaller areas called hamlet groups (rural) / sub-blocks (urban). Three of these smaller parts were selected; one having maximum enterprises with certainty and two others with circular systematic sampling. The first part was called segment 1 and the other two as segment 2. The USUs were selected independently from each of these segments. A detailed note on sample design and estimation procedure followed in the 56<sup>th</sup> round survey is given in Appendix B.

**1.2.5 Method of data collection:** A team of two or three investigators along with one supervisor (Assistant Superintendent) was deployed for fieldwork in each FSU. The Investigators visited every house / structure in the sample FSU (or selected parts in case of bigger FSU s) and listed all the households and / or enterprises in each house / structure. The list of households and enterprises provided separate frame for selection of households and enterprises. In every FSU, a maximum of 4 households were selected for consumer expenditure cum employment-unemployment survey and 16 enterprises were selected for detailed survey. Interview method was used for data collection from the sampled households and enterprises. Separate schedules were used for consumer expenditure and unorganised sector manufacturing enterprise survey for collecting data.

**1.2.6 Sub round:** The entire survey period (1<sup>st</sup> July 2000 to 30<sup>th</sup> June 2001) was divided into four sub-rounds of three months' duration each (Sub-round 1: July-September 2000, Sub-round 2: October-December 2000, Sub-round 3: January-March 2001, Sub-round 4: April-June 2001) and equal number of sample villages and blocks were allocated to each sub-round. Each FSU was surveyed during the sub-round period to which it was allocated. Within a particular sub-round, the fieldwork was spread out uniformly over different months to the extent possible.

**1.2.7 Schedules canvassed:** A listing schedule (Schedule 0.0) was used for listing households and the manufacturing and repairing enterprises mainly for preparing the frame for drawing the required number of sample households and enterprises for collection of detailed information in each selected village/block. Information collected through listing schedule was used for calculating multipliers for estimation purpose. The enterprise schedule (Schedule 2.2) was canvassed in each of the selected sample enterprise for collecting the basic information, such as employment, fixed assets, borrowings, input, output and value added of the sampled enterprise. Schedule 1.0 was canvassed to collect detail information on consumer expenditure and employment-unemployment.

**1.2.8 Release of results:** The present report, is the third in the series of reports being released on unorganised sector manufacturing based on the data collected through Schedule 2.2 in NSS 56<sup>th</sup> round. It discusses size of the unorganised manufacturing sector in India, number of persons employed fixed assets, borrowings and yearly gross value added. Appendix B gives a note on sample design and estimation procedure. Major findings based on the survey data are discussed in Section two. The detailed statistical tables are given in Appendix A.

**1.2.9 Reference Period:** *Last month* was used as the reference period to collect most of the data. Various receipts and expenses as well as employment, emoluments, rent, interest and value added for the enterprises was collected for the last month only. *Last month* referred to the last 30 days (preceding the date of survey) for perennial and casual enterprises irrespective of the number of days of operation. For seasonal enterprises also, last month referred to the last 30 days (preceding the date of survey), if they worked continuously for the last 30 days or more (including Scheduled holidays) in the current season. Only for seasonal enterprises, which worked for less than 30 days in the current season, last month referred to an average month in the last working season. If some enterprise was unable to give information for the last 30 days and was able to give information for the latest calendar month from their books, figures for the latest calendar month were taken. For some of the items like value of fixed assets, amount of loan outstanding, etc., the reference period was 'as on the date of survey'. For other items like net additions to fixed assets, number of months operated, number of other economic activities taken up etc., the reference period was the 'last 365 days preceding the date of survey'.

### 1.3 Concepts and definitions:

**1.3.1 Enterprise:** An enterprise is an undertaking engaged in the production and / or distribution of some goods and / or services meant mainly for the purpose of sale, whether fully or partly. An enterprise may be owned and operated by a single household or by several households jointly on a partnership basis, or by an institutional body.

**1.3.2 Own-account enterprise:** An enterprise, which is run without any hired worker employed on a fairly regular basis, is termed an own account enterprise. If such an enterprise is engaged in manufacturing and/or repairing activities, it is termed as an Own Account Manufacturing Enterprise (OAME).

**1.3.3 Establishment:** An enterprise which is **employing at least one hired worker** on a fairly regular basis is termed as an establishment. Paid or unpaid apprentices, paid household member/servant/resident worker in an enterprise are considered hired workers. Establishment have further been categorised into two parts; non-directory and directory.

**1.3.4 Non-directory establishment:** An establishment employing less than six workers (household and hired workers taken together) is termed non-directory establishment. If such an establishment is engaged in manufacturing activities, it is termed Non-Directory Manufacturing Establishment (NDME).

**1.3.5 Directory establishment:** A directory establishment is an establishment which has employed six or more workers (household and hired workers taken together). If such an establishment is engaged in manufacturing activities, it is termed Directory Manufacturing Establishment (DME).

**1.3.6 Worker:** A worker is defined as one who participates either full time or part time in the activity of the enterprise. The worker may serve the enterprise in any capacity - primary or supervisory. He/she may or may not receive wages / salaries in return to his / her work incidental to or connected with the entrepreneurial activity. A worker need not mean that the same person is

working continuously; it only refers to a position. Persons working for less than or equal to half of the normal working hours of the enterprise on a fairly regular basis are considered as part time workers. Full time workers are those who work for more than half of the period of normal working hours of the enterprise on a fairly regular basis. Two part-time workers in an enterprise are counted as 2 and not 1.

**1.3.7 Working owner:** The owner who personally works in the proprietary or partnership enterprises on a fairly regular basis is called working owner. In fact, in most of the own-account enterprises the owner himself/ herself manages all activities of the enterprise without the help of anyone (on a fairly regular basis). In the case of partnership enterprises, if only one partner or some of the partners or all the partners work in the enterprise on a fairly regular basis then they are considered as 'working owners'.

**1.3.8 Hired worker:** A hired worker is a person employed directly or through any agency on payment of regular wage / salary in cash or kind. Apprentices, paid or unpaid, are to be treated as hired workers. Paid household workers, servants and resident workers of the enterprise are also to be considered as hired workers.

**1.3.9 Other worker / helper:** This includes all persons belonging to the household of the proprietor or households of the partners who are working in or for the enterprise without regular salary or wages. Persons working as exchange labourer in the enterprise without salary or wages will also be covered in this category. All unpaid household workers / helpers who are associated with the activities of the enterprise during the reference month are considered in this category.

**1.3.10 Fairly regular basis:** The term "fairly regular basis" means the major part of the time when operation(s) of an enterprise are carried out during a reference period.

**1.3.11 Mixed activity:** There are enterprises, which carry out a number of activities simultaneously. For example, a grocery shop owner may also sell oil from his own *oil-mill*, a doctor may have a medical shop attached to his dispensary, a restaurant may run an STD booth in its premises, etc. Each of such activity was treated as a separate enterprise if information for them was separately available. If the accounts were not separable then the data pertained to the enterprise as a whole was collected and the enterprise was classified as having mixed activities and the activities of such enterprises a mixture of NIC's. The appropriate NIC in such cases was determined on the basis of **major** activity. Major activity refers to the activity, which yielded maximum income or turnover or employment. If the maximum income earning activity was not unique, we looked at the activity with the maximum turnover. If there was no unique activity with the maximum turnover, we took the activity with the maximum employment. The activities may be mixed at any level of NIC, but for the present survey an enterprise was considered to have mixed if its activities were different at 2-digit level of NIC-1998.

**1.3.12 Multiple activity:** Since many of the entrepreneurs belonging to the unorganised sector operate at small or marginal levels, the phenomenon of carrying out more than one activity simultaneously or at different points of time is quite prevalent. If the activities were carried out at one point of time at the same location and the information was not separately available, then it was taken as "mixed activity". Total number of economic activities carried out by the

entrepreneur during the last 365 days is the total number of multiple activities. Some examples of multiple activities are: i) a person carrying out agriculture activity at sowing / harvesting season and running a shop at the same time or at other times, ii) a lady working as regular wage / salary earner and also running a shop in the evenings, etc. However, a manufacturing enterprise manufacturing woollen garments before winter and cotton clothes before summer was not considered as carrying out multiple activities. It may be noted that multiple activity relates to the various economic activities carried out by the entrepreneur whereas mixed activity is carried out by an enterprise.

**1.3.13 Fixed assets:** Fixed assets are assets held for the purpose of producing or providing goods or services and they are not held for resale in the normal course of entrepreneurial activities. These cover all goods, new or used that have a normal economic life of more than one year from the date of purchase.

**1.3.14 Land and Building:** **Land** means the land on which the enterprise is accommodated together with the surrounding area, which is used for the enterprise. This also includes improvement to land. However, if only a portion of the land belonging to the residence of a household is utilised for the enterprise, only that portion of the land is considered under capital assets for the enterprise. Land owned with permanent heritable possession with or without right to transfer the title comes under this category. Land held on long-term lease, say, 30 years or more is also treated as land owned. **Building** is the structure, where activities of the enterprise are undertaken. This also includes all other structures like shed, house, portions of a house or other structure, building under construction and other conveniences in which the activities of the enterprise are carried out. This also includes other constructions such as passage, wall, water tank, sewerage, tube-well, etc.

**1.3.15 Plant and machinery:** Plant is generally the name given to an assembly of machinery / equipment / devices installed for the operation of entrepreneurial activities. Machinery means an implement or mechanical device used in the entrepreneurial activities. These are assets of durable nature and can be easily identified.

**1.3.16 Transport equipment:** All vehicles, power-driven or man / animal-driven, used for transporting persons, goods and materials by the enterprise in connection with its activity are covered in this category. Animals, if used for drawing vehicles or carrying loads, will be treated as part of transport equipment.

**1.3.17 Tools and other fixed assets:** Tools refer to small loose implements, generally held in hand for operation and having normal life of more than one year. Other fixed assets refer to other durable equipment which are used for the entrepreneurial activity either directly or indirectly. These include furniture, fixtures, laboratory equipment, office equipment etc. Livestock used in oil-mill is also covered under this category.

**1.3.18 Net additions to the fixed assets during last 365 days:** Net addition to fixed assets was obtained by subtracting depletion of assets from the additions made during last 365 days. Addition to the fixed assets could be made through purchase (new or used) or through own construction. Improvements on land, new construction of building, shed, structure, as well as

assets produced on own account during last 365 days was considered as additions to the fixed assets. Depletion of assets was obtained by considering the assets sold and discarded during last 365 days. The value of assets disposed of in any manner other than sale, were treated as value of assets discarded. Besides obsolescence (gone out of use) of an asset, this included loss due to theft, damage, accident etc.

**1.3.19 Loan:** Any borrowing in cash or kind to be repaid in cash or kind is termed as loan. Loans taken for the purpose of utilising the same in the entrepreneurial activities of an enterprise were considered even if such loans were used for other purposes. On the other hand, loans taken for other purposes but ultimately used in the enterprise were excluded.

**1.3.20 Operating expenses:** The total of values of raw materials, electricity, fuel, lubricants and auxiliary materials consumed; cost of maintenance, services purchased and other expenses incurred during the reference period by an enterprise were considered as 'operating expenses'.

**1.3.21 Receipts :** The sale value of products and by-products manufactured by an enterprise together with the value of services rendered to other concerns and other receipts incidental to entrepreneurial activities are considered as 'total receipts'.

**1.3.22 Gross value added:** Value added represents that part of production which is the actual contribution of an enterprise to the economy. **Value added in product approach** is calculated by deducting 'total operating expenses' from the value of 'total receipts' during the reference period. **Value added in income approach** is calculated by adding the following components: (i) emoluments, (ii) rent payable on land and building, (iii) interest payable on loan outstanding and (iv) net surplus during the reference period.

#### **1.4 Abbreviations and Notations used:**

##### **1.4.1 Major states:**

While discussing the results and the graphs, the term ‘major States’ is used to indicate States having a large number of enterprises. These ‘major States’ and their abbreviated name given within brackets are: Andhra Pradesh (AP), Assam (ASM), Bihar (BHR), Gujarat (GUJ), Haryana (HAR), Jammu and Kashmir (J&K), Karnataka (KTK), Kerala (KER), Madhya Pradesh (MP), Maharashtra (MAH), Orissa (ORS), Punjab (PUN), Rajasthan (RAJ), Tamil Nadu (TN), Uttar Pradesh (UP), West Bengal (WB), Jharkhand (JRK), Chhatisgarh (CTG) and Uttaranchal (UTC). “ALL” is used to denote all India in some places.

##### **1.4.2 Important Abbreviated Terms**

Terms used	Refer to sub-para
OAME	1.3.2
NDME	1.3.4
DME	1.3.5
GVA	1.3.22

##### **1.4.3 Others:**

1 lakh= 100000

## Section Two

### Summary findings

**2.0 Introduction:** The present report is the third in a series of four reports based on the survey of unorganised manufacturing units carried out in the 56<sup>th</sup> round of NSS during July 2000-June 2001. This report focuses mainly on the nature of employment, fixed assets and borrowings and this section presents summary of the results. Detailed tables for all India, States and Union Territories as also for different industries with urban and rural break-up are included in the annexure. Some of the tables also provide further break-up by type of enterprise—Own Account Manufacturing Enterprise (OAME), Non-Directory Manufacturing Establishments (NDME) and Directory Manufacturing Establishments (DME). In this section, some of the derived figures like totals and ratios may be slightly affected by rounding off. All value figures in rupees (Rs.) are at current prices.

The 56th round of NSS broadly covered all the unorganized manufacturing enterprises under the two-digit NIC 98 codes 15 to 37, i.e., Tabulation Categories ‘D’ of NIC 1998 and also enterprises under cotton ginning, cleaning and baling as under NIC 98 code 01405. This survey excluded the following groups of enterprises:

Manufacturing enterprises registered under Sections 2m (i) and 2m (ii) of Factories Act, 1948, including enterprises engaged in cotton ginning, cleaning and baling covered under Annual Survey of Industries (ASI) but included enterprises manufacturing bidi and cigar not covered under Annual Survey of Industries (ASI) irrespective of their registration under Bidi and Cigar Workers (condition of employment) Act, 1966.

The Statement 0 gives the activities covered in the survey. This list differs from that of 51<sup>st</sup> round (1994-95) that had used NIC 87 and Statement 0A shows the coverage of activities in that round.

### Statement 0: Activities covered in the survey and their NIC-1998 divisions

NIC-1998 codes	Activity
01405	Cotton ginning, cleaning and baling
15	Manufacture of food products and beverages
16	Manufacture of tobacco products
17	Manufacture of textiles
18	Manufacture of wearing apparel; dressing and dyeing of fur
19	Tanning and dressing of leather; manufacture of luggage, handbags, saddler, harness and footwear
20	Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials
21	Manufacture of paper and paper products
22	Publishing, printing and reproduction of recorded media
23	Manufacture of coke, refined petroleum products and nuclear fuel
24	Manufacture of chemicals and chemical products
25	Manufacture of rubber and plastics products
26	Manufacture of other non-metallic mineral products
27	Manufacture of basic metals
28	Manufacture of fabricated metal products, except machinery and equipment
29	Manufacture of machinery and equipment n.e.c.*
30	Manufacture of office, accounting and computing machinery
31	Manufacture of electrical machinery and apparatus n.e.c.*
32	Manufacture of radio, television and communication equipment and apparatus
33	Manufacture of medical, precision and optical instruments, watches and clocks
34	Manufacture of motor vehicles, trailers and semi-trailers
35	Manufacture of other transport equipment
36	Manufacture of furniture; manufacturing n.e.c.*
37	Recycling

\*n.e.c. – not elsewhere classified

### Statement 0A: Coverage of activities in 51<sup>st</sup> vis a vis 56<sup>th</sup> round

51<sup>st</sup> round of NSSO used NIC 87 and some of the codes are as follows i) NIC 87 code 3941 (repair and maintenance of computers and computer based systems), ii) NIC 87 code 3942 (repair of office, computing and accounting machinery other than computers and computer based systems), iii) NIC 87 code 398 (repair of heavy motor vehicles), iv) NIC 87 code 971 (repair of household electrical appliances), v) NIC 87 code 972 (repair of TV, VCR, radio, transistor, tape-recorder and other electronic appliances), vi) NIC 87 code 973 (repair of watches, clocks and jewellery), vii) NIC 87 code 974 (repair of motor vehicles and motor cycles except trucks, lorry and other heavy vehicles), viii) NIC 87 code 975 (repair of bicycles and cycle rickshaws) and ix) NIC 87 code 979 (repair enterprises not elsewhere classified).

The NIC '98 has classified these repair related services of NIC '87 under various non-manufacturing industry groups, viz, 72501, 72502, 50200, 52602, 52603, 52604, 50404, 52605 and 52609. However, as already mentioned, NIC '98 code 01405 (cotton ginning, cleaning and baling) was covered in the 56<sup>th</sup> round to keep parity with the coverage of the ASI.

Some important indicators relating to the unorganized manufacturing sector of India, as of whole, are presented in Statement 1. Rural and urban areas are shown separately, as are the three types of enterprises – OAME, NDME and DME.

The estimates of number of enterprises and the number of workers are of great importance. The number of workers multiplied by the annual gross value added per workers gives the contribution of this sector to GDP. Similarly, the number of enterprises multiplied by the fixed assets per enterprises gives the aggregate fixed assets in this sector. Other uses of the figures presented should be obvious to the users. The distributions of the country total between rural and urban sectors and over types of enterprises viz., OAME, NDME and DME, are of considerable interest, as are rural -urban differentials and differentials across the type of enterprises.

Detailed figures by States/ UTs are given in subsequent tables. They throw light on variation across the States/ UTs in the characteristics of the unorganized manufacturing sectors. (Note 'Pradesh' in the names of the States have been abbreviated to 'Pr.' in the tables.)

Some important indicators at a glance:

**Statement 1: Some important figures and ratios relating to the unorganized manufacturing sector (OAME, NDME, DME) at all India level**

**Distribution of samples**

**2.1 Number of first stage units surveyed:** Statement 2 shows the number of first stage units (FSU s) allotted for survey and actually surveyed in different States / UT s.

2.1.1 Combining both rural and urban, the highest number of FSU s was surveyed in Uttar Pradesh followed by Maharashtra, Tamil Nadu, Andhra Pradesh, West Bengal in descending order having share 9.979.979.97,9.03,7.27,6.83 and 6.55 percentage respectively. 9.979.97 The top 5 States mentioned here have accounted for about 40% of the FSU s surveyed.

**2.2 Number of enterprises surveyed:** Statement 2.1 accounts for the number of enterprises surveyed, by activity and type of enterprises ('OAMEs', 'NDMEs', 'DMEs') separately for rural, urban and combined. A total of 152494 enterprises were surveyed all over India. Of them, 60770 (i.e., 39.85%) were from rural areas and 91724 (61.15%) from urban areas. Of the sample enterprises surveyed in rural areas, 78.28% were OAMEs, 13.33% were NDMEs and the rest (8.39%) were DMEs. Similarly, in the urban areas, 59.16% were OAMEs, 27.14% were NDMEs and the rest (13.70%) were DMEs.

\* See Statement 0 on page 10 for descriptions of NIC Codes.

2.2.2 Statement 2.2 presents the number of enterprises surveyed by State / UT and type of enterprises ('OAMEs', 'NDMEs', 'DMEs') for rural, urban and combined. Highest number of enterprises was sampled from Uttar Pradesh which was followed by Tamil Nadu, Maharashtra, Andhra Pradesh, West Bengal in descending order.

2.2.1 This information on number of sampled enterprises will caution the user who might like to look at the estimates at the disaggregated level by the State / UTs, NIC '98 division or enterprise type with respect to their sampling errors, which can increase with decrease of sample size.

## Distribution of enterprises

**2.3.1 Number of enterprises:** Statement 3.1 reveals the number of enterprises as estimated from this survey, by activity and type of enterprises separately for rural, urban and combined. At the all India level, the number of enterprises was estimated as 170.24 lakhs. Of these, 119.35 lakh (i.e., 70.10 %) enterprises were located in rural areas and the remaining 50.9 lakhs in the urban areas.

2.3.2 For both rural and urban sector combined, the estimated number of enterprises was found to be the highest in the categories of '*manufacture of food products and beverages*' contributing 17.69%. This was followed by those in '*manufacture of wood and of products of wood and cork, except furniture and manufacture of articles of straw and plaiting materials*', '*manufacture of wearing apparel; dressing and dyeing of fur*', '*manufacture of textiles*' and '*manufacture of tobacco products*' with their contribution being 16.52%, 16.5%, 14.12%, and 12.36% respectively. These five industries together accounted for 77.24% of the total number of enterprises.

**2.4 Distribution of enterprises by enterprise type:** Following may be stated from statement 3.1A. In rural areas, more than 95% of the enterprises engaged in *recycling, manufacture of tobacco products, products of wood, cork, straw and plaiting materials, paper and paper products and leather; luggage, handbags, saddler, harness and footwear* were OAMEs. In urban areas, more than 99% of enterprises engaged in *manufacture of tobacco products* were OAMEs.

2.4.1: Statement 3.2A gives distribution of enterprises in State / UT by enterprise type separately for rural, urban and combined. At all India level, nearly 86% enterprises were OAMEs, 10% were NDMEs and 4% were DMEs. In rural areas, the OAMEs, NDMEs and DMEs were nearly 93%, 5% and 2% respectively. In urban areas the OAMEs, NDMEs and DMEs were nearly 71%, 21% and 8% respectively.

**2.5 Share of activities in total number of enterprises:** Statement 4 gives percentage share of enterprises in total estimated number of enterprises by activities. In rural areas, most of the OAMEs were engaged in *'manufacture of wood and manufacture of products of wood and cork, except furniture and manufacture of articles of straw and plaiting materials'*; most of the NDMEs and DMEs were engaged in *manufacture of food products and beverages*. In urban areas, most of the OAMEs and NDMEs were pursuing *'manufacture of wearing apparel, dressing and dyeing of fur'* whereas most of the DMEs were pursuing *'manufacture of textiles'*. In both the rural and urban sectors, *the category of 'manufacture of office, accounting and computing machinery'* had the lowest proportion of enterprises.

**Statement 4: Share of activities in total number of enterprises by enterprise type and sector**

2.5.1 The five top industries viz., *manufacture of products of wood, cork, straw and plaiting materials, food products and beverages, textiles, wearing apparel & dressing and dyeing of fur and tobacco products* together account for 82.4% of the rural and 65.1% of the urban enterprises.

## Employment situation

**2.6 Estimated number of workers :** Statement 5.1 reports the estimated number of workers, by activity and type of enterprises separately for rural, urban and combined. At the all India level, the number of workers was estimated as 370.81 lakhs. Of these, 239.86 lakhs (i.e., 64.68 %) of workers were in enterprises located in rural areas and 130.95 lakhs in the urban areas. About 79.83% workers in the rural areas and 45.16% workers in the urban areas were engaged in OAMEs.

\* See Statement 0 on page 10 for descriptions of NIC Codes.

2.6.2 Combining both rural and urban sectors, the estimated number of workers was found to be highest in the category of '*manufacture of food products and beverages*'. This was followed by '*manufacture of textiles*', '*manufacture of wood and manufacture of products of wood and cork, except furniture and manufacture of articles of straw and plaiting materials*', '*manufacture of wearing apparel and dressing and dyeing of fur*' and '*manufacture of tobacco products*' having shares as 18.45, 16.67, 14.08, 12.33 and 9.19 percentage respectively. These five industries together accounted for 70.73% of the total number of workers.

Chart 2: Estimated number of workers for major states

All sectors combined

2.6.3 Statement 5.2 presents information on the estimated number of workers by State / UT and type of enterprises ('OAMEs', 'NDMEs', 'DMEs') for rural, urban and combined. West Bengal had the highest estimated number of workers followed by Uttar Pradesh, Tamil Nadu, Andhra Pradesh, Maharashtra in descending order of number of workers employed with respective share as 15.83, 14.57, 9.29, 8.9 and 8.02 percentage respectively. These 5 States together have accounted for 56.60% of all the workers engaged in unorganised manufacturing enterprises.

2.6.4 Chart 2 presents the estimated number of workers in the 18 major States. These 18 States together had accounted for about 95% of the estimated number of workers engaged in unorganised manufacturing enterprises.

2.6.5 From statement 5.3 it is seen that the share of the workers in a State/ UT lay between 11 and 733 per 10000 population of Census 2000 and the median value over the States/ UTs was 261 for all enterprise type taken together. For this figures Arunachal Pradesh reported the lowest value and West Bengal reported the highest value.

**Statement 5.3: Estimated number of workers per 10000 population of Census 2000 in different States/ UTs**

**2.7 Distribution of workers by gender:** Statement 6.1 gives the distribution of workers by gender in different activities separately for rural, urban and combined. At all India level, nearly 34% of workers were female with corresponding figures of 39% in rural areas and 25% in urban areas. The category of *manufacture of tobacco products* had the highest proportion of female workers followed by *manufacture of chemicals and chemical products*. More than 50% of workers engaged in both these activities were female. In rural areas, more than 50% of workers engaged in *manufacture of paper and paper products* were female.

2.7.4 At the all India level, 31.6 % of the working owners were female. About 55.68% of the unpaid household workers / helpers and exchange labourers working for the enterprise without regular salary or wages, referred as other workers, were found to be female whereas, the proportion of hired female workers was much lower than for the other two categories of workers (15.68%). The highest proportion of female working owners (83%) was found in Manipur followed by Karnataka, Kerala and Tamil Nadu. The proportion of female other workers was about 50% or more in 16 State / UT s. In Kerala, the proportion of female hired workers was highest among all State / UT s (about 43%).

**2.8 Estimated annual gross value added per worker (in rupees):** Statement 7.1 describes the estimated annual gross value added per worker by product approach in rupees, by activity and type of enterprises ('OAMEs', 'NDMEs', 'DMEs') separately for rural, urban and combined. The data from the enterprises were collected for the reference month. The annual value added was computed by multiplying the related data by 12 in case of perennial and casual enterprises and by 'number of months operated' for seasonal enterprises. At the all India level, the estimated annual gross value added per worker was estimated as rupees 16200. In rural areas the estimated annual gross value added per worker was rupees 8800, 19100 and 21200 for OAMEs, NDMEs and DMEs respectively. The same in the urban areas was rupees 14600, 31300 and 38100 for OAMEs, NDMEs and DMEs respectively. Statement 7 compares the figures for different rounds and the total GVA for the 56th round was 172.65 % that of the 51<sup>st</sup> round.

\* See Statement 0 on page 10 for descriptions of NIC Codes.

2.8.1 Combining both rural and urban sectors the highest estimated gross annual value added per worker (rupees 48800) was found in the category of *manufacture of office, accounting and computing machinery* and this was followed by *manufacture of other transport equipment*, then by *manufacture of medical, precision and optical instruments, watches and clocks*, *manufacture of basic metals* and *manufacture of motor vehicles, trailers and semi-trailers* in descending order. The category of *manufacture of tobacco products* (rupees 6900 in rural areas and rupees 7300 in urban areas) contributed the lowest estimated gross annual value added per worker.

2.8.2 Considering all the industries together, the value added per worker in the rural areas was 43% of the value added per worker in the urban areas. The value added per worker in rural areas was more than that in the urban areas only in *manufacture of basic metals*.

2.8.3 Statement 7.2 presents the estimated annual gross value added per worker (in rupees), State / UT -wise and by type of enterprises ('OAMEs', 'NDMEs', 'DMEs') for rural, urban and combined. Among the major States, the estimated annual gross value added per worker was the highest in Punjab followed by Gujarat, Haryana, Maharashtra, Rajasthan. It may be noted that the estimated gross value added per worker for the DMEs in Sikkim was reported to be high compared to other states/ UTs, which employed higher number of workers. As Annual Survey of Industries was not done in Sikkim the big manufacturing enterprises were covered by this survey.

**Statement 7.2: Estimated annual gross value added per worker (in hundred rupees) separately for different States/ UTs**

Statement 7.3A,B & C present distribution of annual emoluments per hired worker by type of enterprise. Annual emoluments per hired worker for all combined was Rs.18500/- .For NDME, the corresponding figure was 93.7% and for DME it was 103.9% of the overall. This indicates that emoluments per worker were almost the same for NDME and DME in the rural sector. In urban area the emoluments was higher for DME in comparison to NDME. If we examine the data by the industries, the emolument per worker, the highest was reported in the category of *manufacture of medical, precision and optical instruments, watches and clocks*. This value was the lowest in the category of *manufacture of tobacco products*. Among all State and UTs in India, Chandigarh had the highest emoluments while Orissa had the lowest.

**Statement 7.3A: Estimates annual emoluments per hired worker, number of hired workers and number of workers by sector and by type of enterprise**

## Fixed assets

**2.9 Estimated market value of assets per enterprise (in Rs. '00s):** Statement 8.1 shows the estimated market value of assets per enterprise in Rs. '00s, by activity and type of enterprises ('OAMEs', 'NDMEs', 'DMEs') separately for rural, urban and combined. At all India level, the estimated market value of assets per enterprise was estimated as rupees 60500. The market value of assets per enterprise in rural areas was about 20% of that in the urban areas. In rural areas the estimated market value of assets per enterprise was rupees 17600, 88200 and 320700 for OAMEs, NDMEs and DMEs respectively. The same in the urban areas was rupees 49200, 237300 and 663600 for OAMEs, NDMEs and DMEs respectively.

\* See Statement 0 on page 10 for descriptions of NIC Codes.

2.9.1 Combining both the rural and urban sector the category of *manufacture of motor vehicles, trailers and semi-trailers* had the highest estimated market value of assets per enterprise and this was followed by *manufacture of radio, television and communication equipment and apparatus, manufacture of office, accounting and computing machinery and manufacture of other transport equipment and publishing, printing and reproduction of recorded media*. The category of *manufacture of tobacco products* had the lowest estimated market value of assets per enterprise (i.e. rupees 7800 in rural areas and rupees 12900 in urban areas).

2.9.2 When all the industries were taken together, the estimated market value of assets per enterprise in the rural areas was about 20% of the estimated market value of assets per enterprise in the urban areas. The estimated market value of assets per enterprise in rural areas was more than that in the urban areas only in manufacture of cotton ginning, cleaning and baling.

2.9.3 Statements 8.2, 8.2 A & 8.2B bring out the estimated market value of assets per enterprise (in Rs. '00s), by State / UT and type of enterprises ('OAMEs', 'NDMEs', 'DMEs') for rural, urban and combined. Among the major States, the estimated market value of assets per enterprise was highest in Haryana followed by Punjab, Gujarat, Maharashtra, Tamil Nadu in descending order. The estimated market value of assets per enterprise was lowest in Orissa (i.e. 20.17% of the all India) among the major States.

**Statement 8.2: Estimated market value of assets per enterprise (in Rs.'00s) in different States/ UTs**

From Statements 8.3A, B and C it was revealed that the category of land and building was the main constituent of the fixed assets, which covered 77% of the total assets. Further, hired assets were in the category of land and building generally. Contribution of the other type of assets in hired assets was negligible.

**Statement 8.3A: Distribution of estimated market value of fixed assets as on date of survey per enterprise by enterprise type**

## Borrowings

2.10 **Estimated amount of loan outstanding per enterprise (in Rs. '00s):** Statement 9.1 gives the estimated amount of loan outstanding as on date of survey (referred as “estimated outstanding loan per enterprise” hereafter) in Rs. '00s, by activity and type of enterprises ('OAMEs', 'NDMEs', 'DMEs') separately for rural, urban and combined. At the all India level, the estimated outstanding loan per enterprise was estimated as rupees 5100. In rural areas the estimated outstanding loan per enterprise was rupees 400, 7300 and 105200 for OAMEs, NDMEs and DMEs respectively. The same in the urban areas was rupees 1000, 10900 and 90600 for OAMEs, NDMEs and DMEs respectively.

**Statement 9.1: Estimated outstanding loan per enterprise (in Rs. '00s) in different industries**

\* See Statement 0 on page 10 for descriptions of NIC Codes.

2.10.1 The had lowest estimated outstanding loan per enterprise was found in the category of *manufacture of tobacco products* and this was followed by *manufacture of wearing apparel and dressing and dyeing of fur, manufacture of wood and products of wood and cork, except furniture and manufacture of articles of straw and plaiting materials, recycling and tanning and dressing of leather; manufacture of luggage, handbags, saddler, harness and footwear* in increasing order. The category of *manufacture of basic metals* had the highest estimated outstanding loan per enterprise (i.e. rupees 125600 in rural areas and rupees 83000 in urban areas).

2.10.2 Considering all the industries together, the estimated outstanding loan per enterprise in the rural areas was about 29% of the estimated outstanding loan per enterprise in the urban areas. The estimated outstanding loan per enterprise in rural areas was more than that in the urban areas in the category of *manufacture of basic metals, manufacture of chemicals and chemical products, cotton ginning, cleaning and baling and manufacture of tobacco products*.

2.10.3 Statement 9.2 gives break-up of the estimated outstanding loan per enterprise (in Rs. '00s), State / UT -wise and by type of enterprises ('OAMEs', 'NDMEs', 'DMEs') for rural, urban and combined. Among the major States, the estimated outstanding loan per enterprise was lowest in Bihar followed by Jharkhand, Orissa, Assam and West Bengal respectively. The estimated outstanding loan per enterprise was highest in Maharashtra among the major States.

2.10.5 Statements 9.3A & B present distribution of outstanding loans per enterprise by source. About 69.0% of this loan was obtained from *central and state level term lending institution, banks and other societies* and followed by *moneylenders* with a corresponding percentage of 12. The percentage of this loan to the assets owned was 12% for all sectors combined and this value does not differ much for rural and urban.

**Statement 9.3A: Distribution of outstanding loans by source loans to total amount per enterprise and sectors**

sector	total		loan from different agencies as percentage to total <b>outstanding</b> loan

\* See Statement 0 on page 10 for descriptions of NIC Codes.

2.10.6 Statements 9.3C & D show distribution of annual interest payable on loan amount per enterprise. This value was highest for the category of *moneylender* i.e. more than 25% compared to *central and state level term lending institution, banks and other societies* for whom this value was 15.9%. It was seen from statements 9.3A and B that highest outstanding loan was from *central and state level term lending institution, banks and other societies* but its percentage share of interest payable to total outstanding loan was less than that of *moneylenders*. It can therefore be said that the very high interest rates of moneylenders was not preferred source of borrowing when compared to other sources. Another interesting issue that came to light was that these enterprises do not obtain any substantial loan from *other institutional agencies* in general as they might possibly be ignored owing to their asset size of enterprise.

**Statement 9.3C: Distribution of annual interest payable to loan amount per enterprise by sector**

sector	annual interest payable to different agencies as percentage of outstanding loan						
	central and state level term lending institution, banks and other societies	other institutional agencies	money lenders	business partner	supplier / contractor	friends and relatives	others

## Changes over Time

2.11.1 This survey was preceded by other manufacturing enterprise surveys of 51<sup>st</sup> (July 1994—June 1995) and 55<sup>th</sup> (July 1999—June 2000) rounds in NSS. The coverage of these earlier surveys do not match exactly with the 56<sup>th</sup> round. The NSS 55<sup>th</sup> round and the 56<sup>th</sup> round used NIC 98 classification while the NSS 51<sup>st</sup> round used NIC 87. The 55<sup>th</sup> round surveyed 2 types of enterprises viz., OAE and Establishments, in the tabulation categories D,F,G,H,J,I,K,M,N,O of NIC98 but the 56<sup>th</sup> focused on the tabulation categories D with further break up of the Establishments into NDMEs and DMEs. The estimates for manufacturing units derived from 55<sup>th</sup> round used a smaller sample of enterprises than those of the 56<sup>th</sup> round and, hence, may be subjected to more sampling variations than those from the 56<sup>th</sup> round and this may be kept in view while making comparisons of estimates between these two rounds.

2.11.2 The statements 10.1, 10.2 and 10.3 present comparative figures over the three rounds viz. NSS 56<sup>th</sup>, 55<sup>th</sup> and 51<sup>st</sup>. The figures for only the common activities covered in both 51<sup>st</sup> round and 56<sup>th</sup> round have been considered in these statements. Here activities covered in the 51<sup>st</sup> round but excluded in the 56<sup>th</sup> round have not been included. See Statement 0 & 0A also.

2.11.3 The figures reported in rupee value for NSS 51<sup>st</sup> and 55<sup>th</sup> was adjusted by the consumer price indices separately for Agricultural Labourers in the rural areas and Urban Non-manual Employees in the urban areas so that they are equivalent to the current prices of the NSS 56<sup>th</sup> round.

2.11.4 Statement 10.1 compares number of enterprises estimated by rounds and enterprise types and shows that this figure for the 56<sup>th</sup> round was 135.53% of the 51<sup>st</sup> round at all India level with respect to all enterprise type taken together. In the 55<sup>th</sup> round of the NSS, the estimated number of *informal manufacturing* enterprises stood at 142.69 lakhs whereas the estimated number of *unorganised manufacturing* enterprises in the 56<sup>th</sup> round survey was 170.24 lakhs. Also, the proportion of DMEs surveyed in this round (12%) was higher than that of the 51<sup>st</sup> round (8%).

### Statement 10.1: Changes in number of enterprises in different enterprise types over 56<sup>th</sup>, 55<sup>th</sup> and 51<sup>st</sup> rounds

NSS round	estimated number of enterprises (in hundred)											
	rural				urban				combined			
	OAME	NDME	DME	all	OAME	NDME	DME	all	OAME	NDME	DME	all
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)
56 <sup>th</sup>	110582	6295	2469	119346	36072	10822	4002	50895	146654	17117	6470	170241
55 <sup>th</sup>	90050		6090*	96140	33460		13100*	46560	123510		19180*	142700
51 <sup>st</sup>	86410	5980	2930	95320	20110	6830	3350	30290	106520	12810	6280	125610

\*In the 55<sup>th</sup> round, separate figures for NDMEs and DMEs are not available.

2.11.5 Statement 10.2 shows that the number of workers estimated in 56<sup>th</sup> round had also been found to be higher than the number of workers found in the 55<sup>th</sup> round of NSS. In 56<sup>th</sup> round the figure for all enterprise type together was 123.62 % of that of the 51<sup>st</sup> round.

**Statement 10.2: Changes in estimated number of workers in different enterprise type over 51<sup>st</sup>, 55<sup>th</sup> and 56<sup>th</sup> round**

NSS round	estimated number of workers (in hundred)											
	rural				urban				combined			
	OAME	NDME	DME	all	OAME	NDME	DME	all	OAME	NDME	DME	all
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)
56 <sup>th</sup>	191472	19329	29057	239857	59141	36287	35522	130951	250612	55616	64579	370808
55 <sup>th</sup> round	148667	28253*		176920	55684	64006*		119690	204351	92259*		296610
51 <sup>st</sup> round	167160	16460	24450	208070	38440	23490	29960	91890	205610	39950	54410	299970

\*In the 55<sup>th</sup> round, separate figures for NDMEs and DMEs are not available.

2.11.6 Statements 10.3 shows gross value-added for the 3 rounds at current prices of the 56<sup>th</sup> round. Combining both urban and rural sectors, the figure for all enterprise types taken together is 88 and 68 corresponding to the 55<sup>th</sup> and 51<sup>st</sup> round with the base as 100 assigned to the 56<sup>th</sup> round. This implies this section of the economy has grown over these rounds and may play an important role in the future.

**Statement 10.3: Changes in estimated annual gross value added (in lakh rupees) for different enterprise types over 51<sup>st</sup>, 55<sup>th</sup> and 56<sup>th</sup> round**

NSS round	estimated annual gross value added (in lakh rupees)

# **Appendix B**

## Appendix B

### Coverage, Sample Design and Estimation Procedure

**1 General:** The focus of the NSS fifty-sixth round, conducted during 1<sup>st</sup> July 2000 to 30<sup>th</sup> June 2001, was on manufacturing enterprises in the unorganized sector. In addition, annual household consumer expenditure enquiry including key characteristics of employment-unemployment was also conducted. Therefore, this was an integrated survey covering unorganised manufacturing enterprises and the household consumer expenditure.

**1.2 Subject Coverage:** The survey covered manufacturing enterprises (Tabulation category 'D' of NIC '98) in the unorganized sector including cotton ginning, cleaning and baling enterprises not covered under Annual Survey of Industries (NIC '98 code 01405). All Public Sector or Departmental enterprises were out side the coverage.

**1.3 Geographical coverage :** The survey covered the whole of the Indian Union except (i) Leh and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond five kilometers of the bus route and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year and (iv) some first stage units (FSU s) (numbering less than 0.1% of total) where EC '98 work could not be conducted.

**1.4 Period of survey and work programme :** The fieldwork of fifty-sixth round commenced on 1<sup>st</sup> July 2000 and ended on 30<sup>th</sup> June 2001. The survey period was divided into four sub-rounds of three months duration each as follows:

Sub-Round 1	July-September 2000
Sub-Round 2	October-December 2000
Sub-Round 3	January-March 2001
Sub-Round 4	April-June 2001

Equal number of sample FSU s were allotted for survey in each of these four sub-rounds. Each FSU is surveyed during the sub-round to which it is allotted. Because of arduous field condition prevailing in Andaman and Nicobar Islands, Lakshadweep, rural areas of Arunachal Pradesh and Nagaland, this restriction was relaxed in these states.

**1.5 Schedules of enquiry :** The following schedules of enquiry were used in the survey.

srl. no.	schedule no.	title of the schedule
(1)	(2)	(3)
1.	0.0	list of households and non- agricultural enterprises
2.	2.2	unorganized manufacturing
3.	1.0	household consumer expenditure

**1.6 Participation of States:** In this round all the States and Union Territories except Andaman & Nicobar Islands, Dadra & Nagar Haveli and Lakshadweep have participated at least on an equal matching basis. The following table shows the prevalent matching pattern of the participating State / UT s:

State / UT s	matching pattern
(1)	(2)
Nagaland (urban), Delhi	Triple
Jammu and Kashmir, Manipur	Double
Goa, Maharashtra (urban)	One and half
All other States / UTs	Equal

However, Union Territory of Chandigarh did not participate in the rural sector for state sample and the matching pattern could not be followed for Goa and Nagaland (urban).

**2 Sample Design:** A stratified two / three-stage sample design was adopted with villages (Panchayat wards in case of Kerala) / UFS blocks as the FSU s and manufacturing enterprises in the unorganized sector as the ultimate stage units (USU s). For household consumer expenditure cum employment-unemployment enquiry, households were the USU s.

**2.1 Sampling Frame:** Economic Census conducted during 1998 (EC '98) with enterprise / establishment level data was used as the frame for the survey for the whole of India except Orissa, Bihar & 66 towns of Karnataka. The EC '98 could not be used as frame for Orissa and Bihar because the EC '98 data was not available in these states at the time of sample selection. In case of 66 towns of Karnataka, the EC '98 work was not done using UFS blocks. Therefore, for rural sector of both Orissa and Bihar, population census 1991 was used as sampling frame. In case of urban areas, the latest available list of UFS blocks was used as sampling frame for all towns of Orissa and Bihar as well as for 66 towns of Karnataka.

### 3 Stratification

**3.1 Rural:** Each district was treated as a stratum for all States / UT s, except Orissa and Bihar, and divided into three sub-strata as under.

- sub-stratum 1: FSU s with no unorganised manufacturing enterprises
- sub-stratum 2: FSU s with at least one Directory Manufacturing Enterprise (DME) in the unorganised sector
- sub-stratum 3: The remaining FSU s.

Formation of a sub-stratum was considered only when there were at least 20 FSU s in that sub-stratum; otherwise that particular sub-stratum was not formed and merged with other sub-stratum as per the following working rule:

Sub-stratum 1 (sub-stratum 3) with less than 20 FSU s was merged with sub-stratum 3 (sub-stratum 1). Sub-stratum 2 with less than 8 FSU s was merged with sub-stratum 3. In case of

merger of two or more sub-strata, the FSU s were identified with the sub-stratum having larger number of FSU s.

As EC '98 data were not available for Orissa and Bihar at the time of sample selection, stratification in these two states were done on the basis of Population Census 1991. In this case, each district was taken as a stratum and each stratum was divided into two sub-strata only.

sub-stratum 1: All FSU s with population from 0 to 50 as per population Census 1991.

sub-stratum 2: The remaining FSU s.

Formation of a sub-stratum was considered only when there were at least 20 FSU s in that sub-stratum; otherwise no sub-stratification was effected and all FSU s in this case were taken to belong to sub-stratum 2.

**3.2 Urban:** Strata were formed within each NSS region of a State / UT (except Karnataka). The towns within an NSS region were grouped to form strata according to the population of the towns as per 1991 population Census as given below (P stands for population of '91 census):

- i) Stratum 1: all towns with  $P \leq 50000$
- ii) Stratum 2: all towns with  $50000 < P \leq 100000$
- iii) Stratum 3: all towns with  $100000 < P \leq 500000$
- iv) Stratum 4: all towns with  $500000 < P \leq 1000000$
- v) Stratum 5 / 6 / 7: Each town with  $P > 1000000$ .

Within each stratum (except for Orissa and Bihar and specified 66 towns of Karnataka), three sub-strata were formed, as under:

sub-stratum 1: FSU s with no unorganized manufacturing enterprises

sub-stratum 2: FSU s with at least one DME in the unorganized sector

sub-stratum 3: remaining FSU s.

Sub-stratum 1 (sub-stratum 3) with less than 20 FSU s was merged with sub-stratum 3 (sub-stratum 1) and was identified with the sub-stratum 3 (sub-stratum 1). Sub-stratum 2 with less than 8 FSU s was merged with sub-stratum 3. In case of merger of two or more sub-strata, the FSU s were identified with the sub-stratum having larger number of FSU s.

For Karnataka, there were 66 towns where UFS blocks were not used for EC '98 work. The stratification procedure was therefore modified for the urban sector of Karnataka in the following manner:

All the towns of Karnataka were first grouped within NSS region by town classes as per the criteria given above for other States / UTs. Then for each town class within a region, two strata were formed. The towns included in the list of 66 special category towns formed a special stratum within a region  $\times$  town class. The rest of the towns within the region  $\times$  town class formed a general stratum.

Sub-stratification for general strata of Karnataka was the same as in the case of other State / UT s. For special strata of Karnataka and all the strata of Orissa and Bihar, three sub-strata were formed, as follows:

- Sub-stratum 1: all FSU s (ie UFS blocks as per the latest UFS) identified as Industrial Area (IA),
- Sub-stratum 2: all FSU s identified as Bazar Area (BA),
- Sub-stratum 3: the remaining FSU s.

Priority order that was followed in including a 'mixed area' type FSU e.g. IA and BA, BA and RA, etc in sub-strata is IA and then BA, e.g. an FSU identified as both IA and BA was included in sub-stratum 1.

Sub-stratum with less than 20 FSU s was merged with other sub-stratum under a working rule as given below:

Sub-stratum 1 was merged with sub-stratum 2 if the latter was already been formed; otherwise sub-stratum 1 was merged with sub-stratum 3.

**4.1 Sample Size:** All-India sample size for Central sample was fixed at 14788 FSU s for Central sample and 16220 FSU s for the State sample taking care of prevalent matching pattern for the States as far as possible. Due to non-availability of adequate number of FSU s the State samples of Goa and Nagaland (Urban) were adjusted. The numbers of sample FSU s allotted and surveyed by state  $\times$  sector for the central sample have been shown in Section two.

**4.2 Allocation of Sample size (FSU s) between rural and urban sectors :** The allocation of FSU s between rural and urban sectors was made in proportion to the number of workers engaged in unorganized non-agricultural enterprises as per EC '98 (Census '91 for Orissa and Bihar) with 1.5 weightage to urban sector.

**4.3 Allocation of FSU s among strata / sub-strata:** Allocations of FSU s to strata / sub-strata in both rural and urban sectors (except for Orissa, Bihar and special urban strata in Karnataka) were made in proportion to the number of non-agricultural workers in the unorganized sector as per EC '98.

For Orissa and Bihar rural, allocation was made to strata / sub-strata in proportion to non-agricultural workers as per population Census '91. For urban strata of Orissa and Bihar, allocation was made in proportion to the number of FSU s in the strata. Allocations to sub-strata within the urban stratum were done in proportion to number of FSU s in the sub-strata with weights 2, 2 and 1 for sub-stratum 1, 2 and 3 respectively.

For the special urban strata of Karnataka, stratum allocations were made in proportion to number of non-agricultural workers in the unorganised sector as per EC '98. But sub-stratum allocations were made in the same manner as for urban sub-strata of Orissa and Bihar.

Allocation to any stratum / sub-stratum was adjusted to a multiple of 2 FSU s. (When the proportional allocation turned out to be less than three, it was adjusted to 2. When the allocation was greater than or equal to 3 but less than 5, it was adjusted to 4 and so on.)

While allocating FSU s to stratum / sub-stratum it was, however, ensured that each combination of stratum, sub-stratum and sub-sample was represented.

**5 Selection of FSU s :** For sub-stratum 1 of each stratum in rural / urban sector of each State / UT except urban sub-strata of Orissa and Bihar and all special strata / sub-strata relating to 66 towns of Karnataka, FSU s were selected by simple random sampling without replacement (SRSWOR). For all urban sub-strata of Orissa and Bihar and all special strata / sub-strata relating to 66 towns of Karnataka, FSU s were selected circular systematically (CSS) with equal probability. For all other sub-strata in both rural and urban sectors, FSU s were selected circular systematically (CSS) with Probability proportional to size (PPS), size being the number of manufacturing workers in the unorganized sector as per EC '98. (For Orissa and Bihar rural, size was number of manufacturing workers as per census '91). For an FSU with no manufacturing worker, size 1 was assigned to that FSU before drawing samples). However, some manufacturing enterprises were found to have large number of workers as per EC '98 frame even though they were in the unorganised sector. Some adjustment to the size of workers for such enterprises was, therefore, made before calculating the size of FSU s. For this purpose, any unorganised manufacturing enterprise with more than 200 workers was deemed to have a size equal to 200. Enterprise sizes were thereafter added up to get the FSU size and sub-stratum / stratum size.

5.2 Sample FSU s were drawn in the form of two independent sub-samples in both the sectors. However, for sub-strata 2 and 3 of both the sectors, except those belonging to urban sectors of Bihar & Orissa and 66 towns of Karnataka, a little modification in the usual procedure for CSS PPS scheme was made at the selection stage so that repetition of FSU within a sub-sample or between sub-samples could be avoided. The modification was as follows:

In any cycle of CSS, if the selected FSU was found to be already present in the sample (either in the first or in the second sub-sample), it was skipped and next cycle was executed by adding the sampling interval in order to select a fresh FSU. As a result, all the selected FSU s in the two sub-samples taken together was distinct for the sub-stratum. In some sub-strata where there were some big-sized FSU s, the procedure did not result in selection of required number of distinct FSU s because a situation was encountered where the sample FSU s were repeated again and again even after adding the sampling interval. In a few such cases, where fresh FSU was not found even after 20 cycles, the first unselected FSU obtained by scanning the sub-stratum from the top of the frame was selected. In central sample, the selection of samples for 1<sup>st</sup> sub-sample was completed first and then the FSU s of 2<sup>nd</sup> sub-sample were drawn. In case of state sample, sampling was done independently of central sample. But within the state sample, the procedure of selection was same as in the case of central sample. It may be noted that in view of the above modification, the two sub-samples were no more independent.

5.3 For uniform spread of field work over the survey period all the sample FSU s pertaining to a State / UT were arranged, separately for central sample and state sample, first by stratum and

then each stratum by sub-stratum and each sub-stratum by sub-sample and then sub-round numbers were assigned against sample FSU s in the sequence 1, 2, 3, 4.

**6 Formation of hamlet-groups / sub-blocks:** Hamlet-groups / sub-blocks (h. g. / s. b. s) were formed in large FSU s by considering the population and enterprise criteria as indicated below:

population (P)	no. of h. g. / s. b. s to be formed	no. of non- agricultural enterprises (E)	no. of h. g. / s. b. s to be formed
(1)	(2)	(3)	(4)
0 - 1200	1	0 - 120	1
1201 - 1600	4	121 - 160	4
1601 - 2000	5	161 - 200	5
2001 - 2400	6	201 - 240	6
and so on		and so on	

For rural areas of Himachal Pradesh, Sikkim and Poonch, Rajouri, Udhampur and Doda districts of J & K, number of h. g. s to be formed in the village as per population criterion were 1 for  $P \leq 600$ , 4 for  $601 \leq P \leq 800$ , 5 for  $801 \leq P \leq 1000$  and so on. For enterprise criterion, procedure was not changed for the above areas.

The higher of the two values as per population and enterprise criteria (col. 2 and col. 4 above) were taken as the number (D) of h. g. / s. b. s to be actually formed. Hamlet-group / sub-blocks were formed by more or less equalizing population. Three h. g. / s. b. s were selected - one with the maximum number of DMEs (or with maximum number of NDMEs if there was no DME or with maximum number of OAMEs if there was no DME / NDME in the FSU) or with maximum percentage share of population if there was no manufacturing enterprise in the entire FSU, was always selected and termed as Segment 1; other two were selected circular systematically with equal probability and combined to form Segment 2.

**7 Number of enterprises to be surveyed and procedure of selection:** Three second-stage strata were formed for DME, NDME and OAME for each sample FSU / segment. In an FSU at most 16 enterprises were surveyed. When the frame was found to contain 16 or less of such enterprises all the available ones were surveyed. However, when the frame was found to contain more than 16 such enterprises, a total of 16 enterprises as given below were selected circular systematically with equal probability after arranging the frame enterprises according to Broad Manufacturing Group (BMG) codes.

Number of sample enterprises to be selected in an FSU			
Second-stage stratum	without hamlet-group / sub-block formation	with hamlet-group / sub-block formation Segment 1	Segment 2
(1)	(2)	(3)	(4)
DME	8	6	2
NDME	4	2	2
OAME	4	2	2
Total	16	10	6

**Broad manufacturing group (BMG) code:** One of the codes 1 to 6 as appropriate to the enterprise depending upon its activity was assigned for each enterprise.

Broad manufacturing group (BMG) code			
NIC '98 codes		BMG code	
15-16		1	
17-18, 01405		2	
19-22		3	
NIC '98 codes		BMG code	
23-28		4	
29-36		5	
37		6	

## 8 Estimation Procedure

### 8.1 Notations :

$s$  = subscript for  $s^{\text{th}}$  stratum  
 $t$  = subscript for  $t^{\text{th}}$  sub-stratum ( $t = 1, 2$  or  $3$ )  
 $m$  = subscript for sub-sample ( $m = 1, 2$ )  
 $i$  = subscript for  $i^{\text{th}}$  village/block (FSU s)  
 $1$  = subscript for segment 1  
 $2$  = subscript for segment 2  
 $j$  = subscript for  $j^{\text{th}}$  enterprise type ( $j = 1$  for OAME;  $j = 2$  for NDME;  $j = 3$  for DME)  
 $k$  = subscript for  $k^{\text{th}}$  sample enterprise under a particular enterprise type for Sch.2.2 and  $k^{\text{th}}$  sample household for Sch.1.0  
 $D$  = total no. of h. g. / s. b. s formed in the sample village/block  
 $Z$  = total size of a stratum / sub-stratum  
 $z$  = size of village / block used for selection  
 $n'$  = number of sample villages / blocks allotted for a particular sub-sample.  
 $n$  = number of sample villages / blocks surveyed *including zero cases* for a particular sub-sample  
 $p$  = inclusion probability for the sample FSU s of sub-sample 1  
 $p'$  = inclusion probability for the sample FSU s of sub-sample 2 given sub-sample 1  
 $E$  = total no. of enterprises listed for a particular enterprise type in a segment of sample FSU  
 $e$  = total no. of enterprises surveyed for a particular enterprise type in a segment of sample FSU  
 $x, y$  = observed value of characters X, Y under estimation

$\hat{X}, \hat{Y}$  = estimate of population total of the characters X, Y

$y_{stmi jk}$  = observed value of the character Y for the  $k^{\text{th}}$  sample enterprise of the  $j^{\text{th}}$  enterprise type belonging to segment 1 of  $i^{\text{th}}$  village / block (FSU s) of  $m^{\text{th}}$  sub-sample of the  $t^{\text{th}}$  sub-stratum of  $s^{\text{th}}$  stratum.

### 8.2 Formulae for estimation for a particular stratum, sub-stratum and sub-sample:

i) Estimation formula for sub-stratum 1:

$$\hat{Y}_{stmj} = \frac{Z_{st}}{n_{stmj}} \sum_{i=1}^{n_{stmj}} \left[ \frac{E_{stm1j}}{e_{stm1j}} \sum_{k=1}^{e_{stm1j}} y_{stm1jk} + \left( \frac{D_{stm1} - 1}{2} \right) \frac{E_{stm2j}}{e_{stm2j}} \sum_{k=1}^{e_{stm2j}} y_{stm2jk} \right] ,$$

(t = 1; j = 1, 2 or 3), (m = 1, 2) ..... ... (1)

ii) Estimation formula for sub-strata 2 & 3:

1) for all States except Orissa (urban) and Bihar (urban) and 66 towns of Karnataka:

a) for sub-sample 1:

$$\hat{Y}_{stmj} = \sum_{i=1}^{n_{stmj}} \frac{1}{p_{stmj}} \left[ \frac{E_{stm1j}}{e_{stm1j}} \sum_{k=1}^{e_{stm1j}} y_{stm1jk} + \left( \frac{D_{stm1} - 1}{2} \right) \frac{E_{stm2j}}{e_{stm2j}} \sum_{k=1}^{e_{stm2j}} y_{stm2jk} \right] ,$$

(t = 2 or 3; j = 1, 2 or 3), (m = 1) ..... ... (2)

b) for sub-sample 2:

$$\hat{Y}_{stm} = A_{stmj} + B_{stmj} , m=2$$

where

$$A_{stmj} = \sum_{i=1}^{n_{stmj}} \left[ \frac{E_{stm1j}}{e_{stm1j}} \sum_{k=1}^{e_{stm1j}} y_{stm1jk} + \left( \frac{D_{stm1} - 1}{2} \right) \frac{E_{stm2j}}{e_{stm2j}} \sum_{k=1}^{e_{stm2j}} y_{stm2jk} \right] ,$$

(t = 2 or 3; j = 1, 2 or 3), (m = 2)

$$B_{stmj} = \sum_{i=1}^{n_{stmj}} \frac{1}{p'_{stmj}} \left[ \frac{E_{stm1j}}{e_{stm1j}} \sum_{k=1}^{e_{stm1j}} y_{stm1jk} + \left( \frac{D_{stm1} - 1}{2} \right) \frac{E_{stm2j}}{e_{stm2j}} \sum_{k=1}^{e_{stm2j}} y_{stm2jk} \right] ,$$

(t = 2 or 3; j = 1, 2 or 3), (m = 1)  
..... ... (3)

2) for Orissa (urban) and Bihar (urban) and 66 towns of Karnataka:

$$\hat{Y}_{stmj} = \frac{Z_{st}}{n_{stmj}} \sum_{i=1}^{n_{stmj}} \left[ \frac{E_{stm1j}}{e_{stm1j}} \sum_{k=1}^{e_{stm1j}} y_{stm1jk} + \left( \frac{D_{stm1} - 1}{2} \right) \frac{E_{stm2j}}{e_{stm2j}} \sum_{k=1}^{e_{stm2j}} y_{stm2jk} \right] ,$$

(t = 2 or 3; j = 1, 2 or 3), (m = 1, 2) ..... ... (4)

iii) Estimate for stratum:

$$\hat{Y}_{smj} = \sum_{t=1}^3 \hat{Y}_{stmj} \quad \text{for } j^{\text{th}} \text{ enterprise type, } (j = 1, 2 \text{ or } 3), (m = 1, 2) \quad \dots (5)$$

$$\hat{Y}_{sm} = \sum_{j=1}^3 \hat{Y}_{smj} \quad \text{for all enterprises, } (m = 1, 2) \quad \dots \dots \dots (6)$$

Note:

- i) For rural sector of Orissa and Bihar, there were only two sub-strata i.e.  $t = 1$  or  $2$ ,
- ii) For all sub-strata in the urban sector of Bihar, Orissa and special strata of Karnataka and for sub-stratum 1 in both rural and urban sector of all other States / UTs, stratum / sub-stratum size ( $Z_{st}$ ) was the number of FSU s in the stratum / sub-stratum.

### 8.3 Combined Estimates for aggregate:

Combined estimate for stratum  $s$  (denoted by  $\hat{Y}_{cs}$ ) of two sub-samples was obtained as:

$$\hat{Y}_{cs} = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm} \quad \dots \dots \dots (7)$$

### 8.4 Combined Estimate of aggregates for Region / State / UT / all-India :

The combined estimate  $\hat{Y}_c$  at the Region / State / UT / all-India level was obtained by summing the stratum estimates  $\hat{Y}_{cs}$  over all the strata belonging to the region / State / UT / all-India ie

$$\hat{Y}_c = \sum_s \hat{Y}_{cs} \quad \dots \dots \dots (8)$$

### 8.5 Estimates of ratios :

Let  $\hat{Y}_c$  and  $\hat{X}_c$  be the Region / State / UT / all-India level combined estimates for two aggregate characters  $X$  &  $Y$  respectively.

Then combined ratio estimate  $\hat{R}_c$  of the ratio  $R = \frac{Y}{X}$  was given by

$$\hat{R}_c = \frac{\hat{Y}_c}{\hat{X}_c} \quad \dots \dots \dots (9)$$

**9 Treatment for zero, casualty cases etc.:** While counting number of FSU s ( $n_{stm}$ ) surveyed in a stratum / sub-stratum, all the zero case FSU s (e.g. rural area declared as urban, barracks of

military and para-military forces etc) was also considered. In addition, for a particular schedule if no USU was available in the frame then also that FSU was treated as surveyed in respect of that schedule. However, if the USU s were available in the frame of the FSU but could not be surveyed then that FSU had to be treated as casualty and it was not treated as surveyed.

9.2 Casualty cases: FSU s were treated as casualty when the selected village / block or its substitute could not be surveyed. In addition to this, an FSU, although surveyed, might have to be treated as casualty for a particular BMG  $\times$  enterprise type as given below:

There were three-second stage strata (i.e. enterprise types) within each segment. Casualties were calculated for each second stage strata separately. FSU s with survey codes 1, 2, 4 or 5 having frame enterprises of a particular type greater than 0 but enterprises surveyed as per data file, considering both segments together, as nil ( i.e.  $E_{stmi1j} + E_{stmi2j} > 0$  but  $e_{stmi1j} + e_{stmi2j} = 0$  for the FSU as a whole) were treated as casualty for that enterprise type. FSU s with survey codes 1 – 6 minus the number of casualties identified above were taken as the number of FSU s surveyed ( $n_{stmj}$ ) for enterprise type j. Please note that  $n_{stmj}$  may not be equal for all j within the same stratum  $\times$  sub-stratum.

When casualty for a particular enterprise type occurred in one segment but not in the other segment, FSU was not treated as casualty for that enterprise type but some adjustments in the values of E were made in the other segment in the following way:

- i) Suppose for segment 1,  $E_{stmi1j} > 0$  but  $e_{stmi1j} = 0$  while for segment 2,  $E_{stmi2j} > 0$  and  $e_{stmi2j} > 0$ . In that case  $\frac{D_{stmi}-1}{2} \times E_{stmi2j}$  was replaced by  $E_{stmi1j} + \frac{D_{stmi}-1}{2} \times E_{stmi2j}$  in the formula for multipliers of segment 2. Multiplier for segment 1 was 0.
- ii) Suppose for segment 1,  $E_{stmi1j} > 0$  and  $e_{stmi1j} > 0$  while for segment 2,  $E_{stmi2j} > 0$  but  $e_{stmi2j} = 0$ . In that case  $E_{stmi1j}$  was replaced by  $E_{stmi1j} + \frac{D_{stmi}-1}{2} \times E_{stmi2j}$  in the formula for multipliers of segment 1. Multiplier for segment 2 was 0.

It may be noted that  $n_{stmj}$  was always same for both segments of an FSU.

**10 Treatment in cases of void second-stage strata / sub-strata / strata / NSS region at FSU or enterprise level:** A stratum / sub-stratum may be void because of the casualty of all the FSU s in the stratum / sub-stratum. This may occur in one sub-sample or in both the sub-samples. If it relates to only one sub-sample, then estimate for the void stratum / sub-stratum may be replaced with the estimate as obtained from the other sub-sample for the same stratum / sub-stratum. When a stratum / sub-stratum was void in both the sub-samples, the following procedure was recommended:

Case (1): Stratum void case at FSU levels: In this case, as a general rule, the stratum / sub-stratum may be merged with a similar stratum / sub-stratum of the same NSS region according to the guidelines given below:

- i) When sub-stratum 1 of a stratum was void, it would be merged with sub-stratum 1 of another stratum belonging to the same NSS region.
- ii) When sub-stratum 2 (sub-stratum 3) was void but sub-stratum 3 (sub-stratum 2) of a stratum was not void, it would be merged with sub-stratum 3 (sub-stratum 2) of the same stratum.
- iii) When sub-stratum 2 and 3 of a stratum were both void, they would be merged with the respective sub-stratum of another stratum belonging to the same NSS region.
- iv) When the entire stratum was void, it would be merged with another stratum of the same NSS region, merger being done sub-stratum-wise.

Case (2): Stratum void case at enterprise type level (i.e. all the FSU s were casualties for a particular enterprise type): An FSU may be casualty for a particular enterprise type although the FSU was surveyed. If all the FSU s of a stratum / sub-stratum became casualties in this manner for a particular enterprise type, the stratum / sub-stratum would become void. The adjustment for this type of stratum / sub-stratum void case may be done according to the following guidelines:

The adjustment would be made involving the strata / sub-strata belonging to an NSS region only. Suppose A, B and C were the three strata in an NSS region and sub-stratum i of C is void. If  $Y_{aij}$ ,  $Y_{bij}$  are the aggregate estimates for sub-stratum i of A and B respectively for  $j^{th}$  enterprise type, then estimate  $Y_{cij}$  for the  $j^{th}$  enterprise type for sub-stratum i of C would be obtained as  $(\frac{Y_{aij} + Y_{bij}}{Z_{ai} + Z_{bi}} \times Z_{ci})$  where  $Z_{ai}$ ,  $Z_{bi}$ ,  $Z_{ci}$  were the sizes of sub-stratum i of strata A, B and C respectively ( $i = 1, 2 \text{ or } 3; j = 1, 2 \text{ or } 3$ ).

For any other type of stratum void case, reference may be made to SDRD, NSSO, Kolkata for guidelines.

In case an NSS region could not be surveyed at all, the same should be excluded from the coverage of the survey. The state level estimate would be based on the estimates of NSS region for which acceptable estimates are available.

Estimation procedure laid down above relates to the estimates of population characteristics on the basis of the annual round data only. As provision for generating sub-round / semi-round wise estimates was not made in the sample design, no attempt should be made to build up sub-round / semi-round (six months) estimates.

\* “-” has been used in the statements and tables if no enterprise was surveyed in that particular level of desegregation. On the other hand, the figure “0” has appeared in some levels of desegregation where the estimated figure is very low and has become “0” due to rounding off the figures.
