FOREWORD

The *Monthly Integrated Survey of Selected Industries (MISSI) 2007 - 2008*, is the seventh edition of the annual series published by the National Statistics Office (NSO). This edition features the final results of the MISSI and the Producer Price Survey (PPS), both of which are monthly undertakings of NSO. Both surveys are envisioned to provide *flash* indicators on the performance of growth-oriented industries in manufacturing.

Part I features the highlights of the 2000-based MISSI and PPI which include indices on the value and volume of production, growth rates of the value and volume of net sales, capacity utilization, producer price index and response rates for the years 2007 and 2008.

Part II includes the Technical Notes on the methods used in the computation of the new 2000-based indices.

Part III consists of statistical tables for the 2000-based MISSI and PPS indicators by major sectors and sub-sectors of the manufacturing industry for the years 2007 to 2008.

As part of our continuing effort to give our data users timely information, monthly results are disseminated as press releases at the NSO website: www.census.gov.ph.

This Office gratefully acknowledges and appreciates the continued cooperation extended by the responding establishments.

PART 1
HIGHLIGHTS

MONTHLY INTEGRATED SURVEY OF SELECTED INDUSTRIES (MISSI) 2007 – 2008

HIGHLIGHTS

Total Manufacturing	2008	2007
Average Year-on-Year Growth (In percent)		
Production Index (2000 = 100)		
Value (VaPI)	4.4	-3.8
Volume (VoPI)	0.2	-4.5
Net Sales Index		
Value (VaNSI)	2.9	-2.5
Volume (VoNSI)	-0.5	-3.9
Producer Price Index	4.1	0.8
Average Capacity Utilization	81.7	79.9

- Value of Production Index (VaPI)**

The average Value of Production Index (VaPI) of total manufacturing industry in 2008 increased to 148.7, which expanded modestly by 4.4 percent after it contracted by 3.8 percent in 2007. Refer to Table 1 and Figure 1.

VaPI's average annual growth in 2008 was supported mainly by the double-digit expansion in production of **leather products** and **beverages**, which posted increases of 24.1 percent and 23.8 percent, respectively. In addition, the reversal in production performance of **footwear and wearing apparel**, which posted a double-digit increase of 19.3 percent from a double-digit contraction of 11.8 percent during the previous year, contributed much to the increase. Other sectors that registered double-digit increments were **food manufacturing**, **petroleum products**, **basic metals**, **non-metallic mineral products**, and **wood and wood products**.

Value wise, production registered the strongest year-on-year growth of 14.0 percent in September 2008. This was primarily due to the surge in production value of **petroleum products**, which soared by 65.7 percent from a 6.7 percent increase in 2007. Similarly, **fabricated metal products** went up faster by 36.9 percent while **beverages** sped up by 36.4 percent following a drop of 0.7 percent during the same period a year ago.

However, on a month-on-month basis, value of production picked up its highest single-digit growth of 5.9 percent in April 2008. More than half of the manufacturing industry showed increases in production value but only four (4) of the twenty (20) major sectors posted double-digit growths. **Petroleum products** led the sectors, which slowed sharply by 36.2 percent from a 53.1 percent

rise during the same month a year ago. **Tobacco, non-metallic mineral products** and **fabricated metals** made a turn around after dipping same month last year.

- **Volume of Production Index (VoPI)**

The average Volume of Production Index (VoPI) for total manufacturing industry increased to 84.8, which grew by a mere 0.20 percent after it fell by 4.5 percent in 2007. *Refer to Table 2 and Figure 2.*

In 2008, the manufacturing industry experienced an increase in volume of production but only three (3) major sectors managed to reflect double-digit expansions in production volume, as follows: **leather products** (18.8%), **beverages** (16.9%), and **footwear and wearing apparel** (16.4%).

VoPI, on a year-on-year basis, picked its highest growth of 7.0 percent in September 2008. This was brought about by the strong demand for **petroleum products**, which accelerated by 34.0 percent from a 6.0 percent increase during the prior year. Moreover, **beverages** made an upturn, which jumped by 22.4 percent after it fell by 1.7 percent last year. Other sectors that posted double-digit expansions in volume of production were **fabricated metal products** (21.8%), **tobacco** (19.3%), and **non-metallic mineral products** (10.2%).

Like VaPI, VoPI reflected the biggest month-on-month growth of 5.9 percent in April 2008. This was primarily due to the upswing in the production volume of **tobacco**, which expanded by 35.8 percent after it tumbled by 8.4 in April 2007. **Petroleum products**, which slowed down by 32.5 percent after it grew by 48.9 percent, still contributed to the increase in April. Production output for **non-metallic mineral products** showed a lift of 13.7 percent following a fall of 6.0 percent last year.

- **Value of Net Sales Index (VaNSI)**

The average Value of Net Sales Index (VaNSI) in 2008 increased by 2.9 percent, a turnaround from its previous year decrease of 2.5 percent. Five (5) of the twenty (20) major manufacturing sectors posted double-digit increments that pushed up the net sales value. **Petroleum products** significantly led the overall expansion, which strengthened further by 24.5 percent, a much higher rate than in 2007. *Refer to Table 3 and Figures 3 to 4.*

VaNSI, on a year-on-year comparison, reflected its biggest uptick of 14.9 percent in July 2008 as **non-metallic mineral products** expanded strongly by 50.5 percent compared to its 0.7 percent increase during the same period last year. Likewise, **basic metals** and **petroleum products** steeply increased by 47.7 percent and 47.6 percent, respectively, after contracting in 2007. Similar double-digit increases were also observed in the following sectors: **food manufacturing, paper and paper products, publishing and printing, and leather products.**

On a monthly comparison, VaNSI recorded a slower pace of 7.0 percent in March 2008 compared with 18.9 percent expansion in 2007. Only four (4) major sectors of the manufacturing industry recorded double-digit increases, as follows: **petroleum products, chemical products, beverages, and footwear and wearing apparel.**

- **Volume of Net Sales Index (VoNSI)**

In contrast to VaNSI, the average Volume of Net Sales Index (VoNSI) in 2008 continued to experience a downtrend as it dropped by 0.5 percent. The contraction was caused mainly by the significant drops in sales volume of six (6) major sectors of the manufacturing industry led by **machinery except electrical**, which posted a double-digit decrease of 37.4 percent from a slide of 6.7 percent last year. Also, sales performance of **textiles** suffered further as it shrank by 28.1 percent from a double-digit contraction of 24.8 percent during the previous year. Other sectors that

strongly influenced the decline in volume of net sales were **basic metals, footwear and wearing apparel, publishing and printing, and furniture and fixtures.** Refer to Table 4 and Figures 3 to 4.

On a year-on-year comparison, VoNSI's highest decrease was noted in December 2008, which dropped by 24.3 percent from an increase of 8.3 percent during the same period last year. This was the result of shrinking sales performance of fourteen (14) major sectors of the manufacturing industry led by **miscellaneous manufactures**, which suffered a sharp downturn of 57.5 percent from a rise of 24.9 percent in 2007. The domestic demand for **machinery except electrical** slumped by 52.2 percent following a significant expansion of 31.5 percent a year ago. Other major sectors that reflected double-digit contraction in sales volume were **basic metals** (-48.8%), **furniture and fixtures** (-42.6%), **textiles** (-39.3%), **electrical machinery** (-32.9%), **publishing and printing** (-29.9%), **leather products** (-29.8%), **wood and wood products** (-22.6%), **food manufacturing** (-21.3%), **beverages** (-16.6%), **transport equipments** (-14.8%), **paper and paper products** (-14.1%), and **chemical products** (-10.9%).

Previous month's comparison showed that VoNSI posted the biggest decline in November 2008, which decelerated further by 13.8 percent from 3.9 percent last year. This was primarily due to the double-digit slide in volume of sales of ten (10) major sectors in the manufacturing industry, as follows: **electrical machinery, food manufacturing, petroleum products, machinery except electrical, basic metals, paper and paper products, textiles, publishing and printing, furniture and fixtures, and wood and wood products.**

- **Producer Price Index (PPI)**

The Producer Price Index (PPI) for total manufacturing edged up to an average annual growth rate of 4.1 percent in 2008 from 0.8 percent increase in the previous year. The double-digit increase in price of two (2) major sectors of the manufacturing industry was enough to lift the growth rate in price. These were **basic metals** and **petroleum products**, which posted double-digit increases of 26.0 percent and 19.3 percent, respectively. Refer to Table 5 and Figures 5 to 6.

The PPI moved up to its highest year-on-year growth of 8.3 percent in November 2008 after it fell by 0.4 percent during the same month of previous year. The continued rise in price of **basic metals** contributed to the increase, which settled at 26.2 percent. Likewise, similar double-digit increases in price were observed in **electrical machinery, machinery except electrical, beverages, rubber products, textiles, and fabricated metal products.**

On a monthly comparison, price was at its highest in June 2008, which grew by 2.1 percent from a 0.2 percent increase in 2007. In particular, only **textiles** reflected a double-digit expansion of 12.6 percent that pushed up the PPI.

- **Capacity Utilization**

Average capacity utilization for total manufacturing in 2008 stood at 81.7 percent, slightly higher by 1.8 percentage points than the previous year's average. **Basic metals** continued to have the highest capacity utilization rate of 87.8 percent in 2008. Other sectors that posted more than 80 percent capacity utilization rate were **electrical machinery, food manufacturing, petroleum products, electrical machinery, machinery excluding electrical, chemical products, footwear and wearing apparel, rubber and plastic products, miscellaneous manufactures, leather products, and paper and paper products.**

**Distribution of Key Manufacturing Establishments
by Capacity Utilization, Total Manufacturing
2007 – 2008**
(In percent)

Capacity Utilization	2008	2007
Below 50%	4.3	4.0
50% - 59%	7.5	9.5
60% - 69%	17.3	18.9
70% - 79%	21.5	20.4
80% - 89%	38.9	37.0
90% - 100%	10.5	10.2

- **Response Rate**

The final results of the computed MISSI and PPS indices are based on the final response rates for each month of the year. *Refer to Table 7 and 8.*

The average response rates for 2007 and 2008 are shown below.

Average Response Rates For Total Manufacturing
(In percent)

	2008	2007
MISSI	97.9	97.3
PPS	94.9	93.2

PART II
TECHNICAL NOTES

REBASING OF THE MISSI INDICES FROM 1994 TO 2000

MONTHLY INTEGRATED SURVEY OF SELECTED INDUSTRIES FOR MANUFACTURING

1. INTRODUCTION

The predecessor of the Monthly Integrated Survey of Selected Industries (**MISSI**) is the Survey of Key Establishments in Manufacturing or SKEM. Through the years of its operation, the SKEM and later on the MISSI continued to utilize the shuttle type questionnaire for data collection.

The MISSI timeline is shown below:

1981	The SKEM started as a project of the National Accounts Staff (NAS) of the National Economic and Development Authority (NEDA). Indices generated from the SKEM had 1981 as the base period.
1986	The responsibility for the SKEM was transferred to the Economic Census Division of the National Census and Statistics Office (now the National Statistics Office or NSO).
1988	The SKEM was reassigned to the Manufacturing Division of the same agency. Rebasing of the SKEM series to 1985 was completed during the year.
1997	Following the reorganization of the NSO, responsibility of the SKEM was again transferred to the newly created Economic Indices and Indicators Division (EIID). Integration of the SKEM and Department of Trade and Industry's Monthly Industrial Survey (MIS) was finalized and the new survey was renamed as MISSI. The MISSI expanded to include additional information like inventory and capacity utilization. Rebasing of the MISSI series to 1994 also started.
2001	Responsibility of the MISSI was again transferred to the Manufacturing Section of the Industry Statistics Division. MISSI data series with 1994 as the new base period was released during the year, in parallel with the 1985-based series. The 1994-based series had January 1998 as its earliest series.
2002	The 1985-based MISSI data series was discontinued beginning January.
2005	Rebasing of the MISSI series to base year 2000 started.
2007	MISSI data series with 2000 as the new base period was released in August, in parallel with the 1994-based series. The 2000-based series had January 2001 as its earliest series.
2008	The 1994-based MISSI data series was discontinued beginning January. Only the 2000-based series was published.

2. FEATURES OF THE 2000-BASED MISSI SERIES

E.O. No. 352 lists the MISSI as one of the designated statistical activities being undertaken by the NSO. The basic features of the 2000-based MISSI indices are presented as follows:

2.1 Base Year is 2000.

Base year values of the variables **Value of Production** and **Value of Net Sales** are 2000-based.

2.2 Industry Groupings

The industry groupings used in the 2000-based series follow the same groupings utilized in the 1994-based MISSI series to include the new major sector of *Rubber and plastic products*, which consists of two sub-sectors, namely: *Rubber Products* and *Plastic Products*. *Rubber products* was previously a major sector while *Plastic products* was one of the sub-sectors of *Chemical products*.

With previously seven (7) sub-sectors, the major sector of Chemical Products has now (6) sub-sectors, namely: *Basic chemicals and industrial gases*, *Fertilizers*, *Paints*, *Drugs and medicines*, *Cosmetics and toilet preparations*, and *Miscellaneous chemicals*.

The major sector of Machinery except electrical has been split into two sub-sectors, namely: *Machinery and Equipment, n.e.c.* and *Office, Accounting and Computing Machinery*. This revised industry disaggregation of the MISSI indices was adopted to conform to the 1994 PSIC groupings. Thus, there are a total of 20 major sectors, and ten (10) of these are presented by sub-sectors.

2.3 Industry Weights

Weights of major sectors and sub-sectors were obtained from the results of the 2000 Census of Philippine Business and Industry (reference year 1999). The corresponding weights of the above major sectors and sub-sectors have been recomputed to allow for the revised computation of the indices.

Thus, the VaPI, VoPI, VaNSI, VoNSI were computed based on the revised industry disaggregation.

2.4 Selection of Sample Establishments

Sample establishments for the 2000 rebased series were taken from the list of sample establishments covered in the 1994-based MISSI series. Additional sample establishments were included in later years.

2.5 2000-Based Indices

The indices with 2000 as the base year include the Value of Production Index (VaPI) and Volume of Production Index (VoPI), as well the following **new index series**: Value of Net Sales Index (VaNSI) and Volume of Net Sales Index (VoNSI).

2.6 Index Methodology

Index computation in the 2000-based series follows the same methodology utilized in the 1994-based series.

2.7 Imputation Method

Imputation is undertaken for non-response. Non-response in the MISSI is mainly due to late reporting by sample establishments. In a few cases, imputation is also done for problem data that need verification from the sample establishments.

The imputation method used was **historical imputation without trend adjustment**, that is, the latest available data of the sample establishment was used for non-response. However, for the 2000-based MISSI series, there are very few cases of imputed data at the establishments level for the final figures as the response rates are rather high, at nearly 95 percent.

3. STEPS IN REBASING OF MISSI INDICES

The following outlines the procedures in the rebasing of the MISSI indicators:

3.1 Identification of Base Year

The rebased MISSI index series will have the year 2000 as the new base year. This means that base year values of the variables are 2000-based.

3.2 Determination of Indices for Rebasing

The indicators to be generated in the 2000-based MISSI series include the following:

- Value of Production Index (VaPI), year-on-year and month-on-month growth rates.
- Volume of Production Index (VoPI), year-on-year and month-on-month growth rates.
- Producer Price Index (*refer to the succeeding section*).

New Index Series:

- Value of Net Sales Index (VaNSI), year-on-year and month-on-month growth rates.
- Volume of Net Sales Index (VoNSI), year-on-year and month-on-month growth rates.

The last two indices, Net Sales Value and Volume Indices, are new indicators in the 2000-based series. In the 1994-based series, only year-on-year and month-on-month growth rates were generated from the *Net Sales* value and volume data.

3.3 Determination of Sectors and Sub-sectors

The sectors covered in the MISSI and PPI for the 2000-based series follow the same industry groupings utilized in the 1994-based MISSI, that is, there are 20 major sector groups which are in conformance with the National Income Accounts groupings.

3.4 Determination of Weights

VaPI and VoPI

Three options were initially considered in the determination of weights for the 2000-based VaPI and VoPI, as follows: data from the 2000 Census of Philippine Business and Industry (CPBI - reference year 1999), data from the 2002 Annual Survey of Philippine Business

and Industry (ASPBI -reference year 2001), and the average of the 2000 CPBI and 2002 ASPBI data.

1	2000 CPBI	Weights can be derived for the major sectors and sub-sectors as the 2000 CPBI data are available at the 3- and 4-digit PSIC. Weights at the 3-digit industry were derived from Value of Production while those for the 4-digit industry were from Revenue data. The differences in the sources of the weight data at the 3-digit and 4-digit PSIC can be explained by the sampling design adopted in the 2000 CPBI.
2	2002 ASPBI	Weights can be derived for the major sectors only as the survey data are available at the 3-digit PSIC. Weights cannot be derived for the 4-digit PSIC as the sampling design of the survey does not allow the generation of data at the 4-digit industry group.
3	Average of 2000 CPBI and 2002 ASPBI	Weights can be derived for the major sectors by computing the average of the 2000 CPBI and 2001 ASPBI data on Value of Production to obtain the estimates for 2000. A comparison of the weights between these two-year data shows that there are only slight differences for some industries, so the average was computed. However, weights for the 4-digit PSIC cannot be derived due to unavailability of data at this level from the 2002 ASPBI.

The final choice was to utilize weights for the major sectors and sub-sectors from the 2000 CPBI (Option 1 above). Data on **Value of Production** for manufacturing establishments with ATE 20 and over from the 2000 CPBI data (reference year 1999) were used in deriving the weights for the major sectors (3-digit PSIC). On the other hand, data on **Total Revenue** for manufacturing establishments with ATE 20 and over were used in deriving weights for the sub-sectors (4-digit PSIC). Since it is assumed that the structure of industries do not change very much over a short period of time, the 2000 CPBI data was used for the derivation of the weights for the 2000 based indices.

Value of Production is derived by adjusting the *value of products sold* for changes in *inventories of finished products and work-in-process* (ending less beginning). This indicator differs from *Value of Output* as other revenue items like *industrial services* and *fixed assets produced on own account* are not considered.

VaNSI and VoNSI

Weights for these indices for the major sectors (3-digit PSIC) were taken from the 2000 CPBI data on **Value of Products Sold** for manufacturing Establishments with ATE 20 and over. *Value of Products sold* is one of the components of Total Revenue. On the other hand, data on **Total Revenue** for manufacturing establishments with ATE 20 and over were used in deriving weights for the sub-sectors (4-digit PSIC).

Refer to Appendix 1 for list of major sectors and sub-sectors and their corresponding weights for VaPI, VoPI and VaNSI and VoNSI, respectively.

3.5 Selection of Sample Establishments

Sample establishments for the 2000-based series were taken from the list of sample establishments of the 1994-based MISSI series. This was done to maintain **consistency** in the composition of samples for the two base periods.

The criteria for the selection of samples are as follows:

- Generally, all sample establishments in the 1994-based series that were in operation in 2000 until the present and were good respondents were selected as samples.
- Sample establishments which have reports (with actual data) for all or most months of 2000 and 2001 were taken as samples, regardless of whether these samples ceased operation after 2001.
- New sample establishments which were included in the 1994-based series starting 2001 (or later) to the present were also taken as samples, provided these have reports for at least two consecutive years.

New sample establishments are those that were included as new samples during the particular year, regardless of the year these establishments first started operation.

Excluded as samples in the 2000-based series are the following:

- Sample establishments, which have actual reports for only one year.
- Sample establishments, which have closed, ceased operation, on strike, and cannot be located.

Below is the comparative distribution of the number of sample establishments for the 1994-based and 2000-based years.

Number of Sample Establishments by Year

	2003	2004	2005	2006	2007	2008
1994-Based Series	556	538	521	509	530	-
2000-Based Series	533	537	530	545	527	561

Refer to Appendix 2 for the distribution of number of sample establishments by major sector and sub-sector for the years from 2003 to 2007.

3.6 Computation of Base Year Values

Variables for the determination of average base year values are **Value of Production** and **Value of Net Sales**. **Average base year values** of these variables for the year 2000 were computed for each of the sample establishments by aggregating all the monthly values of these variables and divided by 12.

The 2000 monthly base year values consist of the actual data reported by the sample establishments and were used in the 1994-based series. Data of late reports received after the final release of the 1994-based series were also used in the computation of the 2000 average base year values.

3.7 Methodology for Index Computation

The monthly indices on production and sales are presented by selected industry groups following the 3-digit (sectoral) and 4-digit (sub-sectoral) groupings of the 1994 PSIC.

Of the 20 major sectors in the MISSI, ten (10) industry sectors, namely, **food, textile, wood and wood products, petroleum products, chemical products, rubber and plastic products, non-metallic mineral products, basic metals, machinery except electrical, and electrical machinery** have corresponding sub-sectors while the rest have none.

The procedures used in the computation of the indices are as follows:

Sub-sectoral Level (4-digit PSIC)

where: $VaPI_{ijm}$ = VaPI for the i^{th} industry class of the j^{th} industry group for the current month m

V_{ijm} = total value for current month m for all sample establishments in the i^{th} industry class of the j^{th} industry group

V_{ijo} = total average monthly value in base year for all sample establishments in the i^{th} industry class of the j^{th} industry group

$$VaPI_{ijm} = \frac{V_{ijm}}{V_{ijo}} \times 100$$

The formula above was modified to a chained index formula to allow for changes in the composition of the sample establishments under each sub-sector, as follows:

$$VaPI_{ijm} = \frac{V_{ijm}}{V_{ij(m-1)}} \times VaPI_{ij(m-1)}$$

where: $VaPI_{ij(m-1)}$ = VaPI for the i^{th} industry class of the j^{th} industry group for the previous month $(m-1)$

$V_{ij(m-1)}$ = total value for previous month $(m-1)$ for all sample establishments in the i^{th} industry class of the j^{th} industry group

Sectoral Level with no corresponding sub-sectors (3-digit PSIC)

$$VaPI_{jm} = \frac{V_{jm}}{V_{jo}} \times 100$$

where: $VaPI_{jm}$ = VaPI for the j^{th} industry group for the current month m

V_{jm} = total value for the current month m for all sample establishments in the j^{th} industry group

V_{jo} = total average monthly value
in base year o for all
sample establishments in the
 j^{th} industry group

The formula was modified to a chained index formula to allow for changes in the composition of the sample establishments under each sector, as follows:

$$VaPI_{jm} = \frac{V_{jm}}{V_{j(m-1)}} \times VaPI_{j(m-1)}$$

where: $V_{j(m-1)}$ = total value for previous
month (m-1) for all sample
establishments in the j^{th}
industry group
 $VaPI_{j(m-1)}$ = VaPI for previous month
(m-1) of the j^{th} industry group

Sectoral Level with corresponding sub-sectors (Food, Textiles, Wood and wood products, Chemical products, Petroleum products, Rubber and plastic products, Non-metallic mineral products, Basic metals, Machinery except electrical, and Electrical machinery)

$$VaPI_{jm} = \sum_{i=1}^n VaPI_{ijm} \times W_{ij}$$

where: $VaPI_{ijm}$ = VaPI for the j^{th} industry
group for the current month m
 W_{ij} = weight for the i^{th} industry class
of the j^{th} industry group
 $i = 1, 2, 3, \dots n$ = number of industry
class in the j^{th} industry group

Total Manufacturing

$$VaPI_{km} = \sum_{j=1}^q VaPI_{jm} \times W_j$$

where: $VaPI_{km}$ = VaPI for total
manufacturing at current
month m
 W_j = weight of the j^{th} industry
group
 $j = 1, 2, 3, \dots q$ = number
of industry group

4. DISSEMINATION OF RESULTS

Results of the 2000-based MISSI series covering the period 2007 to 2008 are disseminated as Special Release at the NSO website.

REBASING OF THE PPI DATA SERIES FROM 1994 TO 2000

PRODUCER PRICE INDEX

1. INTRODUCTION

The National Statistics Office (NSO) generates the monthly Producer Price Index (PPI) for manufacturing ahead of the indicators generated from the MISSI such as the Value of Production Index (VaPI), Volume of Production Index (VoPI), capacity utilization rate, among others, to better measure the performance of the industry.

2. HISTORICAL BACKGROUND

PPI Timeline is presented below:

1980	<p>Studies on the generation of the Producer Price Index (PPI) started when the Index of Physical Volume of Production series being generated by the then Central Bank of the Philippines (now the Bangko Sentral ng Pilipinas) was discontinued. This came about because of the transfer of responsibility of operations and processing of the Monthly Survey of Establishments (MSE) for manufacturing from the Central Bank to the National Census and Statistics Office (now the National Statistics Office-NSO).</p> <p>Work on the original PPI started with 1978 as the base year and was later revised to 1985. The source of data for the PPI was then the Monthly Survey of Establishments (MSE) for Manufacturing. The MSE has a rider questionnaire, which asked for data on production of major products of the sample establishments. However, the PPI series were never released as official statistics. It was later felt that the components of the PPI were no longer reflective of the prevailing production structure of the manufacturing sector that the PPI operations were halted.</p>
1992-1993	<p>The compilation of the PPI with 1992 as the base year was revived in a project <i>“Improvement of the Producer Price Index of Selected Manufactured Products”</i> through the Grants-in-aid Program of the National Statistical Coordination Board (NSCB).</p> <p>The NSO with guidance from the Technical Committee on Price Statistics of NSCB worked for further improvements to the PPI to make it more reflective of the actual situation of the manufacturing sector. The conduct of the Producer Price Survey started as the source of the data for the PPI.</p> <p>Starting with this new base year, the PPI was officially released simultaneous with the SKEM indicators. (The SKEM was later renamed to MISSI.).</p>
2001	<p>The NSO released the rebased series of PPI with 1994 as the new base year. The 1992-based series continued on until December 2001 and was discontinued the year after. The 1994-based series had January 1998 as its earliest series.</p>
2005	<p>Work on the rebasing of the PPI to base year 2000 started.</p>

2007	PPI data series with 2000 as the new base period was released in August, in parallel with the 1994-based series. The 2000-based series had January 2001 as its earliest series.
2008	The 1994-based PPI data series was discontinued beginning January.

3. FEATURES OF THE 2000-BASED PPI

3.1 New Base Year is 2000

The new PPI series will have the year 2000 as the new base year. This means that base year values of the producer prices of commodities are for the year 2000.

3.2 Industry Groupings

The industry groupings in the 2000-based PPI follow the groupings used in the 2000-based MISSI.

3.3 Industry Weights

Since the PPI is a Paasche type index, ideally, it should use current year weights instead of base year weights. Due to the time lag in the availability of data that will serve as current year weights, data on **Value of Production** from the latest available annual survey or census of manufactures were used to derive the weights for the PPI. **Value of Production** is derived by adjusting the *value of products sold* for changes in *inventories of finished products and work-in-process* (ending less beginning).

The weight of an industry group is equivalent to the proportion of the industry **Value of Production** contribution to the next higher level industry group where it belongs. Thus, the weight (w_i) of a sub-sector (i) is computed as follows:

$$w_i = \frac{V_i}{V_j}$$

where: w_i = weight of i^{th} industry class
 V_i = Value of Production of i^{th} industry class of j^{th} industry group
 V_j = Value of Production of j^{th} industry group.

The 2000-based PPI used the same weights utilized in the yearly series of the 1994 based PPI, as follows:

Year 2008: weights were obtained from 2005 ASPBI
2007: weights were obtained from 2005 ASPBI
2006: weights were obtained from 2003 ASPBI
2005: weights were obtained from 2001 ASPBI
2004: weights were obtained from 1999 CPBI
2003: weights were obtained from 1998 ASPBI

Refer to Appendix 3 for list of major sectors and sub-sectors and their corresponding weights by year.

3.4 Selection of Commodities and Sample Establishments

Sample commodities included in the 2000-based PPI baskets were taken from the list of sample commodities of the 1994-based series. This was done to maintain consistency in the composition of the sample commodities for the two base periods. Additional sample commodities were, however, included in selected industries such as in cement, fabricated metals, leather products, microcircuits, and petroleum products.

The list of commodities in the 1994-based series were updated to include the following sample commodities for the 2000-based series:

- Generally, all sample commodities in the 1994-based series with reported data for all or most months in 2000 to the present were selected as samples.
- Commodities in the 1994-based series with reported data (from sample establishments) for all or most months of 2000 and 2001 were also taken as samples, regardless of whether these commodities ceased to be produced after 2001.
- New sample commodities in the 1994-based series that were included starting 2001 (or later) were also taken as samples, provided these commodities have reported data for at least two consecutive years. **New sample commodities** are those that were included as new commodities in the PPI basket during the particular year, regardless of the year these commodities were first introduced in the market.

Sample commodities which were excluded are the following:

- Sample commodities with reported data for only one year.
- Sample commodities which were produced by establishments and thereafter have closed, ceased operation, on strike, and cannot be located.

Below are the comparative distributions of the number of sample commodities and sample establishments for the 1994-based and 2000-based years.

Number of Sample Commodities by Year

	2003	2004	2005	2006	2007	2008
1994-Based Series	551	548	548	548	586	-
2000-Based Series	537	548	548	580	583	595

Number of Sample Establishments by Year

	2003	2004	2005	2006	2007	2008
1994-Based Series	274	277	276	268	304	-
2000-Based Series	262	277	276	268	304	309

Refer to Appendices 4 and 5 for the distribution of sample commodities and sample establishments by major sector and sub-sector, respectively.

3.5 Data Source

Producer prices of commodities for the PPI are obtained from the Producer Price Survey (PPS) conducted monthly by the NSO. The respondents for the survey are selected manufacturing establishments that produced the selected commodities included in the basket. Period of data collection starts on the 15th day of the reference month and ends on the 30th day of the month after the reference month.

The PPS uses a shuttle type questionnaire that is distributed by the NSO field staff at the beginning of the year to all the sample respondents. This type of questionnaire provides the respondents, as well as NSO staff, with a running account of the previous month's data for one year.

3.6 Imputation Method

Imputation is undertaken for non-response. In many cases, non-response is due to late reporting by the respondents. For practical purposes, the imputed producer price of a commodity is based on the latest available monthly producer price data provided by the respondent, that is, with no trend adjustment. This method is appropriate for the reason that the prices of a number of commodities do not change very much over a period of time, except for volatile products, e.g. petroleum products. For the 2000-based PPI, there are only minimal cases of imputed values as the PPS had rather high response rate, at more than 95 percent as of the final release date of the PPI.

3.7 Computation of Base Year Producer Price

Average base year producer price is computed for each of the sample commodities by aggregating all the monthly producer prices for 2000, and divided by 12.

$$P_{0h} = \frac{\sum_{m=1}^{12} P_{mh}}{12}$$

where:

P_{0h} = average base year producer price of commodity h

P_m = producer price of commodity h for month m of the base year

$m = 1, 2, 3, \dots, 12$ m = months

$h = 1, 2, 3, \dots, n$ h = commodities

The 2000 monthly producer prices of a commodity consist of the actual price data reported by the sample establishment, as well as the imputed data for the non-responses, which were used in index computation in the 1994-based PPI series. If the actual price data for the imputed data are already available (that is, these were received later after the release of the final data of the 1994-based PPI), these were used in the computation of the 2000-based year PPI. Most, if not all, of the base year values in the 2000-based PPI are actual data of producer prices of commodities that were reported by the sample respondents.

3.8 Methodology in the Computation of the PPI

The computation of the 2000-based PPI follows the same methodology used in the 1994-based series.

The industry class level (4-digit PSIC)

The PPI at the 4-digit PSIC is simply the unweighted arithmetic mean of the price relatives of the commodities representing the industry class and multiplied by 100.

$$PR_{ij} = \frac{\sum_{n=1}^N \left(\frac{p_{1h}}{p_{0h}} \right)}{N} \times 100$$

where: PR_{ij} = current month PPI at the i^{th} industry class (4-digit) of the j^{th} industry group (3-digit)
 p_{1h} = current month producer price of commodity h
 p_{0h} = average monthly producer price at base year of commodity h
 N = total number of representative commodities at i^{th} industry class
 $n = 1, 2, 3, \dots, N$

The formula for PPI_{ij} at the 4-digit PSIC was modified to a chained index formula, that is, the average monthly price relative of the commodities in the industry class is multiplied by the previous month PPI at the 4-digit PSIC to obtain the current month PPI. That is,

$$PPI_{ijm} = PPI_{ijm-1} \times \frac{\sum_{n=1}^N \left(\frac{p_{hm}}{p_{hm-1}} \right)}{N}$$

where: PPI_{ijm} = current month PPI
 PPI_{ijm-1} = previous month PPI
 $\frac{\sum_{n=1}^N \left(\frac{p_{hm}}{p_{hm-1}} \right)}{N}$ = average price relative of commodities
 p_{hm} = current month producer's price of commodity h
 p_{hm-1} = previous month producer's price of commodity h

The chained index method is especially useful when new commodities enter into market basket as replacements or additions. The base year prices of these commodities need not be obtained as the alternative then is to make available the previous month producer prices of the new commodities to allow the computation of their corresponding price relatives, p_{hm} / p_{hm-1} .

The industry group and division levels (3-digit and 1-digit PSIC)

The Producer Price Index for manufacturing at the 3-digit and 1-digit PSIC is obtained as the weighted harmonic mean of the component price indices.

$$I_j = \frac{1}{\sum_{i=1}^p \left(w_{ij} \times \frac{1}{PPI_{ij}} \right)}$$

where: I_j = PPI at the j^{th} industry group (3-digit)
 w_{ij} = weight of the i^{th} industry class
 PPI_{ij} = PPI of the i^{th} industry class (4-digit)

PSIC) of the j^{th} industry group
 $i = 1, 2, 3, \dots, p$ = number of industry
 classes at the j^{th} industry group

$$I_k = \frac{1}{\sum_{j=1}^q \left(w_j \times \frac{1}{I_j} \right)}$$

where: I_k = *PPI* for manufacturing (1-digit)
 w_j = weight of the j^{th} industry group
 I_j = *PPI* at the j^{th} industry group
 $j = 1, 2, 3, \dots, q$ = number of industry
 groups

4. DISSEMINATION OF RESULTS

Results of the 2000-based PPI series are disseminated as Special Release at the NSO website covering the period 2007 to 2008.

PART III
STATISTICAL TABLES
