INFORMATIVE REMARKS

The CSA would like to inform data users that:

A separate statistical report is produced to each Region, in order to satisfy data users demand, in general, and fulfill the ever rising interest of regions for detailed statistical information, in particular.

2. Besides to all statistical reports, an analytical report is also produced by the agency and made accessible to users.
3. On top of that an extra statistical report, that reveals distribution and pattern of consumption and expenditures at item level, of the country specific COICOP classification has produced (as part C). However, part C is accessible through an electronic media only.
4. Apart from the Agency's reports a separate report, mainly focused on poverty and growth profile, is expected to be produced by the MoFED. Although, all reports are prepared using same data set due to differences in the analysis approach, similar results wouldn't be expected. Because CSA's report is prepared at 2010/11 prices and actual household size is used in its analysis, while MoFED is expected to use temporal and spatial price adjustments and adult equivalent size for its analysis.

CHAPTER 1

INTRODUCTION AND OBJECTIVES

1.1 Overview

Ethiopia is a country located in the horn of Africa and categorized as one of the least developed countries, according to UN reports. Despite a sustainable long-term economic growth poverty remains a challenge; the socio-economic landscape of the country has significant developments in the last decade. The level and distribution of poverty is declining from time to time and a remarkable economic growth has been observed. In particular, Ethiopia has registered a double digits economic growth rates continuously in the past eight years (MoFED's an Interim Report on Poverty Analysis Study, 2010/11). According to the results obtained from the 1999/2000 Household Income, Consumption and Expenditure (HICE) and Welfare Monitoring (WM) Surveys of the Central Statistical Agency (CSA), about 44 percent of the total population (45% in rural and 37% in urban areas) were found to be below poverty line, while the results of the 2004/05 surveys revealed that about 39 percent of the total population (39.3% in rural and 35.1% in urban areas) were found to be under the poverty line. According to the interim report on poverty analysis study made by the MOFED using the 2010/11 Household Consumption and Expenditure Survey (HCES) of the CSA shows that the poverty rate has declined to 29.6 percent.

The government of Ethiopia together with development partners has put poverty reduction strategies high on the agenda, in order to achieve broad-based and sustained economic growth. With firm dedication to sustain the current economic growth the government of Ethiopia has embarked on the third poverty reduction strategic plan, which is referred to as the Growth and Transformation Plan (GTP) for the period 2010/11-2014/15 and GTP supersedes the first (Sustainable Development and Poverty Reduction Program, SDPRP) and the second (A Plan for Accelerated and Sustained Development to End Poverty, PASDEP) poverty reduction strategic plans. In line with this, GTP carries forward important strategic directions and aims at a minimum to

achieve the Millennium Development Goals (MDGs). Moreover, the current HCES and WMS surveys are used to evaluate the achievements and challenges observed during the PASDEP time frame and these surveys used as a spring board for Monitoring and Evaluation (M&E) of the GTP, which is currently being implemented.

In light of the plan to reduce poverty over time, a strong system of monitoring and evaluation has also been put in place. Consequently, the issue of welfare monitoring in the country arose as part of the Economic Reform Program (ERP). The ERP specifically and strongly underlies to see the effects of the reform program on poverty and building the analytical capacity of the government to monitor and evaluate such effects. To this end, the government has established a Welfare Monitoring System (WMS) in 1996 to oversight the following major activities:

- Establish an information system that provides a continuous picture of the poverty scenario in the country;
- Indicate the impact of reform programs on the level of household welfare;
- Establish follow-up procedures on the various programs and activities targeted towards poverty reduction; and
- Conduct regular statistical surveys to assess, in particular, the efficiency of targeted programs.

The CSA and Development, Planning and Research Directorate of (the then Welfare Monitoring Unit) the Ministry of Finance and Economic Development (MoFED) have been the key actors in the M&E system in place by way of producing, analyzing and disseminating poverty related data and results. The program has been supported by the Development Assistant Group (DAG) since the establishment of the M&E system. The 2010/11 HCE and the 2011 WMS surveys were also assisted, in addition to the usual support from DAG, by the World Food Program (WFP), UNICEF, and the Public Basic Services (PBS) through a program called Chanel One and Statistics Finland.

In order to meet the data needs of the WMS, the CSA has been conducting the two surveys that provide poverty related data: the HICE (Currently HCE) and the WM

surveys since 1995/96. The HCE and the WM surveys provide fundamental information for the designing and M&E of the country's poverty reduction strategy, Sustainable Development and Poverty Reduction Program (SDPRP), various socioeconomic policies and programs and hence monitor the progress towards meeting the MDGs. The two surveys are inseparable and provide basic data that reflect the standard of living of households, individuals and the society as a whole.

The HCE survey basically provides data on consumption and expenditure of households that reflect the income dimension of poverty while WM survey aims at providing socioeconomic data that reflect the non-income dimension of poverty. The HCE survey provides statistics on consumption and expenditure of households and WM survey provides basic indicators on the various socioeconomic areas including health, education, nutrition, access to and utilization and satisfaction of basic facilities/services and related non-income aspects of poverty. The HCE survey has been conducted together with the WM survey every four-five years since 1995/96. The latest of these HCE surveys is for 2010/11 and covered a representative sample of 27,834 households. Previous HCE were similarly representative, covered 11,928, 17,332 and 21,600 households for 1995/96, 1999/00 and 2004/05, respectively.

Several reports have been produced based on the previous surveys including the statistical reports produced by the CSA: report on the 1995/96 HICE survey and WM survey, report on the 1999/2000 HICE survey and WM survey, analytical and statistical report on the 2004/5 HCE survey, summary reports for the 1999/2000 HICE and WM surveys and reports on the 1998 and 2004 WM surveys. Furthermore, two major poverty profile reports were produced by the MOFED, the first one in 1999, and the second which under pinned SDPRP I in 2000 based on the 1999/00 HICE and WM survey data sets. Based on the 2004/05 survey, a report on the dynamics of growth and poverty was also produced.

1.2 Objectives of the HCE survey

The core objective of the HCE survey is to provide data that enable to understand the income dimension of poverty and the major objectives are to:

- Assess the level, extent and distribution of income dimension of poverty;
- Provide data on the levels, distribution and pattern of household expenditure that will be used for analysis of changes in the households' living standard level over time in various socio-economic groups and geographical areas;
- Provide basic data that enables to design, monitor and evaluate the impact of socio- economic policies and programs on households/individuals living standard;
- Furnish series of data for assessing poverty situations, in general, and food security, in particular;
- Provide data for compiling household accounts in the system of national accounts, especially in the estimation of private consumption expenditure; and
- Obtain weights and other useful information for the construction and /or rebasing of consumer price indices at various levels and geographical areas.

1.3 Rational Income Component Exclusion

In contrast to previous similar surveys the “income” component was not captured in the current survey, making the 2010/11 HCE survey rather than an HICE survey. The value importance of income data, particularly in developing economies, is typically very low and thus little was lost by the exclusion of this survey section. Generally, Income data is quite difficult to collect, especially when a large portion of the population is engaged in subsistence agriculture and/or informal sectors (underground activities).

In the Ethiopian context, previous surveys shows that income statistics estimates derived from HICE surveys were usually underestimated. Factors that might affect quality of income data could be different. However, the underestimate status of household income could be primarily explained by the following core elements/ causes. That is:

- Capturing of household income ring of house is not an easy task just due to the fact that the structural behavior of major economic activities, where a large portion of households/population is engaged, in developing economies (on top of being engaging in subsistence agriculture) is dominantly micro & small scale business enterprise and also is mainly informal sector type (usually characterized as underground economy).
- Due to its nature income data is highly exposed to respondents (i.e., reported income by households) under reporting bias.

1.4 Pilot Survey and User–Producer Workshop and Training

1.4.1 Pilot Survey

In the last three surveys (1995/96, 1999/00 & 2004/05) a similar data collection system had been applied for the survey. Data were collected in two rounds in each survey year, in such a way that the data were collected in eight visits per round (as much as 16 visits per sample household on both rounds). The main advantage of data collection via frequent visit system is that it enables to capture seasonal products/items. However, from the past surveys CSA has realized that the system has various constraints. The major draw backs of the system, among others, are the following.

- It is exposed to respondents fatigue resulted from repeated visits of sampled households that leads to respondent's burden.
- The data processing activity has taken a long period of time (as much as two years). Consequently, timelines of the survey has been affected, badly.

(Because of such observed limitations in past surveys, the CSA has decided to redesign the data collection method of the HCE. To do so, the CSA has performed the following basic activities.

- Analysis of the existing data collection methodology;
- Assessment of best practices;
- Devising a better way of data collection methodology; and
- Conducting of pilot survey.

The pilot survey has been conducted for a month time (Data were collected 1-29 Dec. 2009) in rural and urban areas of four regions (Amhara, Oromia, SNNP and Addis Ababa). The pilot survey covered a total of 17 EA and 180 households (48 in Rural and 132 in urban areas).

1.4.2 User-Producer Workshop

As per the change to a new survey methodology, undoubtedly the survey questionnaire has to redesign. Accordingly, based on the pilot exercise a new draft questionnaire has been developed and distributed to main data users and stakeholders (local & international organizations). Consequently a one day workshop, organized by the CSA, was held on 9 March 2010. As a result various comments, suggestion and valuable ideas were forwarded from users, and the CSA has used these useful inputs to refine and finalize the survey questionnaire

1.4.3 Field Staff Training

Unlike the previous HICE surveys in the 2010/11 HCE survey the training was carried out in one phase by bring all actors of the actual field implementation process, i.e.; all enumerators field, editors/supervisors, coordinators and Branch Office Heads in one training center from 17-31 June 2010. Accommodation was arranged for trainees as well as trainers at the center in Addis Ababa.

Training was given by 12 subject matter experts for 15 days. About 320 trainees (180 enumerators, 82 team leaders, 25 Branch Office Head's, 25 Statisticians and 7 Statistical Technicians from Head Office) were participated in the training. The training had, basically, three sessions. Theoretical session, panel group discussion session and a two days field practice session. The panel discussion session has been conducted in the evening just after dinner, usually 8:00 to 10:00 PM, every day. The theoretical training was focusing on theoretical discussions on concepts, definitions, and principles of interview and how to complete questionnaires. The training had also focused on practical sessions which include mock interviews and two-days field practice both in rural and urban areas. The objectives of practical interviewing of households were two fold. First,

it enabled to assess how well the theoretical class discussions were understood by all participants. The second objective was to examine the practical difficulties pertaining to the various socioeconomic groups, which would likely be encountered during the actual fieldwork. In general, the training was more detailed in both theoretical and practical aspects to ensure the full competence of the field staff in collecting the required information.

1.5 Survey Tools

Due to its nature the HCE survey demands various tools for its implementation. The following are, among others, the main tools used to collect the HCE data.

Questionnaire: A hard copy (Paper print) booklet type questioner has been used for data collection. The design of the questionnaire has structured/organized into five main parts (forms). The main components of the survey questionnaire are:

Form 0: is used together basic household information that could help to assess the general livelihood nature of a household and its members, such as: source of household income, status and scope of agriculture engagement (diversity and specialization), safety net/asset accumulation participation, participation in micro and small scale business enterprise, accessibility and/or credit facility status from micro-finance institution, ...etc,

Form 1: has been used to collect data on demographic characteristics and economic activity of household members, such as: age, sex, marital status, education, income contribution status, economic activity and other related variables.

Form 2 (2A & 2B): is used to collect actual consumption (quantity consumed) and equivalent expenditure of food, beverages and tobacco items, that would have been actually consumed by the household (members of the household) within the reference period of the survey. Note that the first three consecutive day's consumption being collected in Form 2A and 2B is used to collect the second phase (consecutive 4 days) of the survey week.

Form 3 (3A, 3B & 3C): Household consumption and expenditure data on non-durable goods and frequent services has been collected using three segments of form 3. Of which 3A and 3B are designed to handle three and four day's data, respectively; while 3C has been used to capture a full month reference data.

Form 4 (4A-4E): Household expenditure data of durable goods and Less-Frequent services was administered in form 4.

In order to facilitate a systematic way of data collection approach, these goods and services are grouped into classes and data were collected using five chapters of the main module in such a way that expenditure data on:

- Clothing and footwear was collected in 4A;
- Dwelling rent, water, fuel and energy, furniture's & furnishing, household equipment and operation were collected by use of form 4B;
- Health, transport and communication goods and services has been collected in form 4C;
- Education, recreation, entertainment, cultural and sport goods and services were collected by the use of 4D; and
- Personal goods and services, financial services, and others including operational cost of production with respect to unincorporated household economic enterprises;

Dairy book: Consumption expenditure of food and beverages data are collected, at first on daily basis, by listing every consumed item by the household (every household member) in each day in a dairy book, to facilitate exhaustiveness of consumption. And, then a summary of attributes are transferred to the main questionnaire.

Measuring tools: Kitchen balance (digital type in urban and analog type in rural areas) and measuring type are used for consumption/quantity data collection.

1.6 Organization of the Report

The statistical report is organized in two parts; part A and B. Part A mainly focuses on socio-economic indicators that show distribution of households and population with respect to some selected demographic and economic characteristics classified by annual household expenditure quintile aggregates. While Part B focuses on household consumption-expenditure estimates, such as: Per Household (PHh) expenditure, Per Person expenditure (PP) indicators in monetary terms and consumption expenditure shares as well as average daily caloric intake indicators aggregated by Household (Hh)

size, educational status of the Hh head, source and type (cash/in kind) of expenditure, and at division and group breakdown levels of a country specific COICOP classification..

Apart from this report, the Agency would like to inform users that detailed statistical report is being produced and will be available in a CD-Rom as well as in the Agency's official website. (www.csa.gov.et).

CHAPTER 2

CONCEPTS AND DEFINITIONS

This chapter serves as a glossary for core elements of the survey and as a guideline, clarifying and facilitating easy understanding of aggregated figures. The terms and basic conceptual points are grouped by: Household Survey, Area of residence, Household characteristics, Employment & Enterprise, Household expenditure, Editing & Coding and Calorie/food energy.

2.1 Household Survey

Household survey is a method of data collection using interviewer/enumerators with designated households as to obtain and record responses (with application of practical measurement if necessary) to a specific least of questions and/or area of interest. A survey differs from a census in that only a sample of households is covered.

2.2 Area of Residence

Urban Centre: An urban centre, in principle, is defined as a locality with 2000 or more inhabitants. In this survey, however, for practical purposes an urban centre includes the following regardless of the number of inhabitants.

- i) All administrative capitals (Regional, Zonal and Wereda capitals),
- ii) Localities with Urban Dweller's Areas (UDAs) not included in (i),
- iii) All localities that are not included either in (i) or (ii) and which have a population of 1000 or more persons and whose inhabitants are primarily engaged in non- agricultural activities.

Urban Kebele (UK): is the lowest administrative unit in an urban centre with its own jurisdiction. It is a locality (commonly known as Kebele) formed by the inhabitants of urban dwellers and usually constitutes a part of the urban centre.

Rural Kebele (RK) is the lowest administrative unit in a settled rural area with its own jurisdiction. It is an association of rural dwellers formed by the inhabitants of a given area whose members are engaged either in agricultural and/or non-agricultural activities.

Enumeration Area (EA): is a unit of land delineated for the purpose of enumeration housing units and population without omission and duplication. An EA usually consists of 150 to 200 households in rural areas and 150 to 200 housing units in urban areas. An enumeration area should be related to an urban or a rural kebele in one of the following ways.

- An EA may be equal to an RK if the number of the households in the RK is less than or equal to 150 – 200 in rural areas; and is equal to a UK in urban areas if the number of housing units in the UK is 150 – 200.
- An EA may be a part of an RK or a UK and its delineation cannot extend outside the boundary of the corresponding an RK or a UK.

Collective Quarter: A collective quarter is a premise (a housing unit, a building or a compound) in which a number of unrelated persons reside together, and share common facilities. Examples of collective quarters are monasteries, prisons, boarding schools, home for aged, children's homes, work camps, military barracks, etc. It is important to note that in the premises of some collective quarters, there may be private households.

2.3 Household Characteristics

Household: Constitutes of a person or group of persons, irrespective of whether related or not who normally live together in the same housing unit or group of housing units and who have common cooking arrangements.

Head of Household: head of a household is a person who economically supports or manages the household or for reasons of age or respect, is considered as head by members of the household or declares himself as head of a household. Head of a household could be male or female.

Member of Household: Person constituting a household is called member of the household. The following are considered as members of a household:

- i) All persons who lived and ate with the household for at least six months including those who were not within the household at the time of the survey and were expected to be absent from the household for less than six months.
- ii) All guests and visitors who ate and stayed with the household for six months and more.
- iii) Housemaids, guards, baby-sitters, etc. who lived and ate with the household even for less than six months.

Household Size: Is the total number of members of a household.

2.4 Employment and Enterprise

Unincorporated Household Enterprise: Unincorporated Household Enterprise (UnIHE) is an economic enterprise undertaking where goods and services are produced for sale and it also includes those engaged in buying and selling activities. An agricultural enterprise producing for own consumption (Household Consumption) only is covered by the definition. Generally, the type of enterprise considered as an unincorporated household enterprise by the survey is an economic enterprise run by the household/member of a household in which its primary aim being to manage the livelihood of the household and doesn't have any distinct demarcation between its income/expenditure and the households' income/expenditure.

Informal sector: For this survey informal sector is defined as UnIHE which:

- Is mainly engaged in marketed production, and
- Not registered company or cooperative, and
- Has no full written book of account, and
- Has less than 10 persons engaged in the activity, and
- Has no licence

Therefore, for this survey an enterprise/establishment/activity is considered informal if it meets the aforementioned five criteria.

Productive Activity: This is an act of selling (making available to the market) the output of an activity (the whole or in part) in kind or in cash: This includes, but is not limited to, working at an enterprise (public or private) for salary/wages. Here too, all activities that are carried out in rural areas by private peasant agricultural holders are considered to be productive.

Employer: is a person who hires at least one employee for her/his enterprise/establishment or activity. Anyone who uses hired labour for her/his activity and takes part in the productive activity is considered an employer.

Employee: An employee is any worker hired by someone on contract, permanent or temporary basis. The payment could be in cash or kind on weekly, bimonthly or monthly basis.

Self Employed: This is an individual who works in his own enterprise including agriculture without hiring any labour. For the purpose of this survey, those who use in this survey those who use family labour without payment also are considered self-employed.

Unpaid Family Worker: A member of a household who is working for the enterprise/establishment or activity of the household without payment.

2.5 Household Expenditure

Consumer goods and Services: goods and services used by a household to directly satisfy the personal needs and wants of its members

Household consumption expenditure: is the value of consumer goods and services acquired, used or paid for by a household through direct monetary purchases, own account production, barter or as income in kind for the satisfaction of the needs and wants of its members.

Actual final consumption: The actual final consumption of a household is the sum of its household consumption expenditure plus the value of consumer goods and services acquired or used through transfers from government, non-profit institutions and other households. This is the

most appropriate concept for welfare analysis as it takes into account all consumer goods and services available to a household for the satisfaction of the needs and wants of its members. However some social transfers, such as free education, health, etc, which are received in the form of services from government and non-profit institutions and in the form of other services from households are extremely difficult to value and have therefore been excluded from all HCE data in the Ethiopian context.

Household expenditure: is defined as the sum of household consumption expenditure and non-consumption expenditures of the household. “Non-consumption expenditures” are those that are incurred by a household without acquiring (receiving) any goods or services in return for the satisfaction of the needs of its members. (i.e., ignoring any potential goodwill) Household expenditure represents the total outlay made by a household to satisfy its needs and meet its “legal” commitments. The non-consumption expenditures of households include current transfers of cash, goods and services to other households such as gifts donations, remittances, alimony, child support, etc. Other items included are contributions to non-profit institutions that do not give rise to the provisions of goods and services to the donor household: compulsory transfers to government such as income and other direct taxes (e.g. wealth taxes), compulsory fees and fines, and social security contributions.

Household Expenditure Quintile: The household expenditure quintiles are used to disaggregate households by total household expenditure levels. The quintiles are calculated by first ordering all households in ascending order by value of household expenditure and then dividing them into five equal parts such that the first group includes the 20% of households with the lowest annual expenditure and the last group includes the 20% of households with the highest annual household expenditure. The values of each Country Level household expenditure quintile are presented in Summary table 1 below.

Summary Table 1:Household Expenditure Quintiles at Country Level (Total)

Quintile	% of HHs	Annual Household Expenditure in Birr-Country Level		
		Lower Limit	Upper Limit	Range
I	20	1,471.48	11,369.98	10,898.50
II	20	11,369.99	15,765.28	4,395.29
III	20	15,765.29	20,657.00	4,891.71
IV	20	20,657.01	28,346.50	7,689.49
V	20	28,346.51	53,572.83	25,226.32

N:B:

- At 2010/11 National average prices
- Prices are not spatially adjusted for regional price differences

2.6 Editing and Coding

Editing: is an office review of questionnaires in order to defect omissions, obvious errors and ambiguous classification that might lead to serious errors in the tabulated results.

Coding: is the process of translating entries in words on a questionnaire into numeric codes to facilitate computer processing of data.

2.7 Calorie/Food Energy

Calorie: is an energy required to heat a gram of water by one degree Celsius. A kilocalorie, termed as Kcal, is equivalent to 1000 calories.

Gross calorie: The total number of calories/Kilocalories in a given weight of food product, prior to discarding any inedible materials. In other words, Gross calorie refers to crude calorie that is estimated based on total purchased/produced weight of consumed food items without discarding any inedible. These are determined mainly, based on the Food Composition Tables (FCT) prepared by the Ethiopian Health and Nutrition Research Institute (ENHRI) and the Food and Agriculture Organization of the United Nations (FAO), 1998.

Net Calorie: The total number of Calories/Kilocalories in a given weight of food after removing the inedible portions. It is the gross calorie deflated by (or minus) the proportion of the inedible portion (part/material), termed as refuse. It is also derived from the FCT calculated by the ENHRI and the FAO, 1998.

Refuse: Refuse refers to the percentage of the total purchased/produced weight that is discarded while preparing food. Refuse includes bones, pits, shells and other inedible portions that could be eaten but as a rule are discarded (potato parings and tough outer leaves of vegetables, for example).

CHAPTER 3

STATISTICAL METHDOLOGY

3.1 Coverage

The 2010/11 HCE Sample Survey covered all rural and urban parts of the country except the non-sedentary population of three zones of Afar and six zones of Somali regions. In the rural part of the country it was planned to cover 864 Enumeration Areas (EAs) and 10,368 households. However, due to various reasons 2 EAs and 47 households were not covered by the survey. The overall response rate is 99.8 percent for EAs and 99.5 percent for households. For urban areas 1104 EAs and 17,664 households were planned to be covered ultimately, 100 percent of EAs and 99.1 percent (i.e. 17,513 Households) of households were successfully covered by the survey.

3.2 Sampling Frame

The list of all households obtained from the 2007 Population and Housing Census was used as a frame to select the sample EAs in the rural and urban areas of the country. The frame from which sample households were selected was based on a fresh list of households taken at the beginning of the survey period in each of the selected EAs.

3.3 Sample Design

For the purpose of representative sample selection, the country was divided into four broad categories including rural category, major urban centers category, and medium and small size town's category.

Category I - Rural:- This category consists of the rural areas of 68 zones and special weredas, which are considered as zones, in 8 regions of the country. This category also includes the rural part of both Harari region and Dire Dawa City Administration. The rural part of each Region including Harari and Dire Dawa City Administration were considered to be a survey domain (i.e. reporting level) for which the major findings of the

survey are reported. This category totally comprises 10 reporting levels. A stratified two-stage cluster sample design in which the Primary Sampling Units (PSUs) were EAs was used to select samples. Twelve households per sample EA were selected as a Second Stage Sampling Unit (SSU) to which survey questionnaire were finally administered to the members of sampled households.

Category II - Major urban centers: - In this category all regional capitals (10 cities) and five other major urban centers that have relatively larger population size (totally 15 urban centers) were included. Each of the 14 urban center and 10 Sub cities of Addis Ababa administration a total of 24 urban domains are taken as a reporting level. In this category too, a stratified two stage cluster sample design was adopted to select the primary sampling units (the EAs). Sixteen households from each of the primary sampling units (EAs) in each reporting level were then selected as a Second Stage Unit (SSU).

Category III & IV - Other urban centers:- urban centers in the country other than those under category II were grouped under these categories. A domain of other urban centers is formed for eight regions (excluding Harari, Addis Ababa and Dire Dawa administration). There is no domain in category III & IV for Harari, Addis Ababa and Dire Dawa administration as they do not have urban centers other than those grouped under category II. Unlike the above two categories, a stratified three stage cluster sample design was adopted to select samples from these categories. The primary sampling unit was urban centers and the second stage sampling unit was EAs. Sixteen households from each of the selected EAs were finally selected as a third stage sampling unit.

3.4 Sample Size and Selection Scheme

Category I:- A total of 864 EAs and 10368 households were selected from this category. Sample EAs of each reporting level were selected using Probability Proportional to Size (PPS) with systematic sampling techniques; size being number of households obtained from the 2007 Population and Housing Census. Twelve households per EA were systematically selected from the fresh list of households prepared at the beginning of the survey.

Category II:- In this category 576 EAs and 9216 households were selected. Sample EAs from each reporting level in this category were also selected using probability proportional to size with systematic sampling techniques; size being number of households obtained from the 2007 Population and Housing Census. Sixteen households in each of the selected EAs were systematically selected from the fresh list of households prepared at the beginning of the survey.

Category III & IV:- One hundred twelve urban centers, 528 EAs and 8448 households were selected in these two categories. Urban centers from each domain as well as EAs in each urban center were selected systematically using probability proportional to size; size being the number of households obtained from the 2007 Population and Housing Census. Sixteen households in each of the selected EAs ultimately were systematically selected from the fresh list of households prepared at the beginning of the survey.

In total, including region rural, region urban and country domains, a total of 66 reporting levels were formed under this design. Annex I distribution of sampling units, annex II provides estimation procedures of total, ratio and sampling errors , annex III provides the standard errors and CVs of selected variables and annex IV the questionnaire in English version respectively.

CHAPTER 4

FILED OPERATION

4.1 Field Organization

The CSA branch offices led by the Branch Office Desks at the Head Office did the major work of the field organization. All the 25 branch offices of the CSA had fully participated in the survey undertaking, starting from recruitment of field staff, sending the trainees for training, in deploying the field staff to their field, field supervision and retrieval of the completed questionnaires periodically to the head office where the data processing activities took place. They were also responsible for administering financial and logistics aspects of the survey. Additionally, line government organizations especially Kebele's also had a significant role in facilitating the fieldwork. Writing administrative letters that introduce the work and the enumerators to the local people particularly the sample households, provision of field guides, etc were tasks of the local government units.

4.2 Data Collection

The data collection of the HCE survey has taken place for one full year from 8 July 2010 to 7 July 2011. A total of 82 data collection team, each composed of two enumerators and one supervisor/ field editor were organized in order to execute the field work. Furthermore, these 82 teams were organized in 25 CSA branch offices, each headed by an experienced statistician. Each team was responsible to collect data in at most 24 enumeration areas (EA). The data collection activities in one EA were taking 15 days for each team.

In the entire selected sample units' data were collected from 12 sample households from each rural sample EA and 16 households from each urban sample EA. In every EA two enumerators were assigned for the data collection in such a way that an enumerator has to collect data from six households in rural and from eight households in urban areas. Data were collected in such a way that the six rural and eight urban households that were

handled by one enumerator were interviewed over a period of one week. The enumerator assigned in rural area visited two households daily and those enumerators assigned in urban EA visited two-three households daily, so that data has been collected from each sample household twice in the survey week. It is believed that the frequent visits made by the enumerators to each household were essential to control errors arising from memory lapse that is common in household surveys of this nature.

In relation to the nature and type of expenditure, different reference periods were used to collect information from each household/ member of household. The reference periods used for data collection of different variables are given in summary Table 2.

Summary Table 2: Reference Periods of Data Collection

Type of Data	Reference Periods
1. Population Characteristics	Beginning of Survey date
2. Food, Beverages and Tobacco	Twice weekly (3&4 days)
3. Clothing and Footwear	Last 3 & Last 12 Months
4. Housing, water, electricity, fuel & power	Conditional:
▪ Water	3 & 4 Days & Last month
▪ Electricity	3 & 4 Days & Last month
▪ Fuel & power	3 & 4 Days & Last Months
▪ Rent Durable Goods and Less frequent Services	Last 3 & Last 12 Months
5. Furnishings, Household Equipment & Maintenance	Conditional:
• Goods & Services for Routine Household Maintenance	3 & 4 Days & Last month
• Durable Goods and Less frequent Services	Last 3 & Last 12 Months
6. Health	Conditional:
• Pharmaceutical Products & Drugs	3 & 4 Days & Last month
• Medical Treatment and Other Health Expenses	Last 3 & Last 12 Months
7. Transport	Conditional:
• Transport Service	3 & 4 Days & Last month
• Purchase, Operation & Durable Goods & Less frequent Services	Last 3 & Last 12 Months
8. Communication	Conditional:
• Frequent Services	3 & 4 Days & Last month
• Equipments, Rent and Maintenance	Last 3 & Last 12 Months
9. Recreation & Culture	Conditional:
• Recreational and Cultural Services and News paper	Twice Weekly (3-4 Days)
• Equipments, Accessories & Repairs	Last 3 & Last 12 Months
10. Education	Conditional:
• Educational Materials	3 & 4 Days & Last month
• Educational Services	Last 3 & Last 12 Months
11. Miscellaneous Goods and Services	Conditional:
• Personal Care	3 & 4 Days & Last month
• Personal Effects, Durable Goods & Less frequent services	Last 3 & Last 12 Months

Both interview and objective methods of data collection were introduced to collect data from households and individuals. Interview method was used to collect information related to population characteristics, amount of expenditure, type of expenditure and source of expenditure. Objective method was used, basically, to measure consumption of food and beverages. Also, objective measurements had been used for non-industrial commodities such as fire wood, charcoal, etc quantity data collection.

Apart from the HCE survey, price survey was also conducted side by side in a nearby market that is a market located around the selected EA. The basic objectives of the price survey were to:

- Furnish price data for the purpose of valuation of consumed items in the cases where value or quantity is missing during data processing operation, and
- Provide price data that would be used for consistency checking activities during the data processing activities.

4.3 Field Supervision

In survey of this type, regular and intensive supervision is necessary and crucial component of the whole data collection process. A regular supervision, which is also compulsory activity in the CSA surveys, has been undertaken at various levels to ensure the quality of the data. The data collection activities of each team had been managed by the team's supervisor/ field editor who was responsible the supervision, field editing and coordination activities. In order to follow the overall coordination and supervision activities at branch office level, each branch office assigned one statistician for the HCE survey data activities only. The statistician had undergone a close supervision and follow-up on the overall HCE data collection activities. Moreover, branch office heads and professionals from the head office that were engaged in the training of the field staff were also involved in the actual field supervision. A team comprised of the top management of CSA, experts from CSA and experts from Finland Statistics had also visited the fieldwork of the survey twice in the survey period.

CHAPTER 5

DATA PROCESSING

5.1 Introduction

The data processing activities of the HCE survey were undertaken at the head office. The processing had begun soon after the start of the field work. Completed questionnaire were returned periodically from the field to the data processing department at the head office. These data processing activities included manual editing, coding, verification, and data capturing (data entry), consistency checking, and data validation activities has been carried out on quarterly basis after completing the entry of a three months data, while estimation with proper sampling weights and tabulation activities were carried out in the final stage of the data processing after getting the whole data sets by concerned professionals.

5.2 Data Editing & Coding, Capturing and Cleaning

Manual data editing, entry and cleaning: Manual editing and coding activities has been started within the first week of August 2010, i.e. following the retrieval of the first batch of filled-in questionnaires from the field to the Head Office. To carry out the editing and coding activates, 21 editors, and five verifiers and four supervisions have been involved. A five day intensive training was given by subject matter experts to these editors, verifiers and supervisors based on instruction manuals prepared for editing purposes.

Similarly, 12 data encoders were trained and assigned to handle the data capturing activity. For HCE survey a double data capturing system (data has to be entered twice by two different operators) has been applied, in order to monitor and avoid errors (usually expected as a result of data entry). Finally at the end of each survey month data consistency check has been made and inconsistent observations have to be checked with the source document, i.e. original questionnaire. These activities have been fully accomplished in the 2nd week of October 2011.

Consistency, imputation, validation and estimation: Data validation and cleaning activity was carried out by subject matter specialists and data processing programmers. The data cleaning and validity checking activities were carried out at commodity, household and visit levels and has been done systematically. Various type of edit specification documents were prepared by subject matter specialists and used for the purpose. Data consistency and validation activities have passed through various phases and steps, such as:

- Imputation of missing observations (either value or quantity) using the available results of the price survey that was collected at the time of the survey from a near-by market places;
- Validity and consistency of quantity and value of consumption items were checked at a visit level based on internal ¹ and/or external ² price data;
- Estimation (conversion) of consumption of own production using the observed quantities and the external price survey data;
- Comparison of the household expenditure was made on durable goods that were collected at different reference periods (3 and 12 months) in order to decide whether to utilize the 3 or 12 month's data for the analysis, and similar validation techniques have been carried out.

After completing consistency checking and validation activities annual estimates were created .Due to the nature of the survey, consistency checking imputation, estimation and data validation activity has taken a long period of time, relatively and has been finalized in February 2012. As a result upon submission of the survey data some poverty indicators have been estimated and officially launched on 16 March 2012 by MoFED.

¹Internal price is the value of consumption expenditure of commodities converted into price per standard unit.

²External price is the price of commodities generated from the price survey that has been collected during the HICE survey in the nearby market places of the selected EAs

STATISTICAL TABLES

ANNEX II

ESTIMATION PROCEDURES OF

TOTAL, RATIO AND

SAMPLING ERROR

ANNEX II: Estimation Procedures of Total, Ratio and Sampling Errors

The following formulas were used to estimate the required variables by reporting levels.

1. Estimate of Total \hat{Y}_h in Rural Domain (Category I)

$$\hat{Y}_h = \sum_{i=1}^{n_h} \frac{M_h H_{hi}}{n_h M_{hi} h_{hi}} \sum_{j=1}^{h_{hi}} Y_{hij} = \sum_{i=1}^{n_h} \sum_{j=1}^{h_{hi}} W_{hi} Y_{hij} \text{-----} \quad (1)$$

Where,

$$W_{hi} = \frac{M_h H_{hi}}{n_h M_{hi} h_{hi}} \text{ is the basic sampling weight}$$

2. Estimate of Total \hat{Y}_h in Major Urban Domain (Category II)

$$\hat{Y}_h = \sum_{a=1}^3 \sum_{i=1}^{n_{aih}} \sum_{j=1}^{h_{hai}} W_{hai} Y_{haij} \text{-----} \quad (2)$$

Where,

$$W_{hai} = \frac{M_{ha} H_{hai}}{n_{ha} M_{hai} h_{hai}} \text{ is the basic sampling weight}$$

3. Estimate of Total \hat{Y}_h in Other Urban Domain (Category III)

$$\begin{aligned} \hat{Y}_h &= \sum_{i=1}^{n_h} \frac{M_h}{n_h n_{hi}} \sum_{j=1}^{n_{hi}} \frac{H_{hij}}{M_{hij} h_{hij}} \sum_{k=1}^{h_{hij}} Y_{hijk} \text{-----} \quad (3) \\ &= \sum_{i=1}^{n_h} \sum_{j=1}^{n_{hi}} \sum_{k=1}^{h_{hij}} W_{hij} Y_{hijk} \end{aligned}$$

Where,

$$W_{hij} = \frac{M_h H_{ij}}{n_h n_{hi} M_{hij} h_{hij}} \text{ is basic sampling weight}$$

The following notations were used in the formula:

M_h = Total number of households in stratum h obtained from the sampling frame.

M_{hi} = Total number of households in EA/PSU i for rural and urban domain or in urban center/PSU i for other urban domain, stratum h obtained from the sampling frame.

n_h = Number of successfully covered sample EAs for rural domain in stratum h.

H_{hi} = Total number of households obtained from the survey listing in sample EA/PSU i stratum h for rural domains.

h_{hi} = Total number of households successfully covered in EA/PSU i stratum h for rural domain.

M_{ha} = Total adjusted number of households of the domain in substrata a and stratum h obtained from the sampling frame

H_{hai} = Total number of households obtained from the survey listing in EA/PSU i of substratum a and stratum h

n_{ha} = Number of successfully covered sample EAs/PSUs for major urban domain in substratum a and stratum h

M_{hai} = Total number of households in EA/PSU i in substratum a and stratum h obtained from the sampling frame

h_{hai} = Total number of sampled and covered households in sampled EA/PSU I substratum a and stratum h

\hat{Y}_{haij} = The observed value of characteristic y for household j, in EA/PSU i, substratum a and stratum h of Major Urban Domain

M_{hij} = Total number of households in EA/SSU j, urban centers/PSU i and stratum h obtained from the sampling frame for other urban center domain.

n_{hi} = Number of sample EAs successfully covered in urban center/PSU i and stratum h for other urban center domain.

H_{hij} = Total number of households obtained from the survey listing in EA/SSU j, urban center/PSU i and stratum h for other urban center domain

h_{hij} = Number of sample households successfully covered in EA /SSU j, urban center/PSU i and stratum h for other urban center domain.

Y_{hij} = The observed value of a characteristic y for household j in sampled EA/PSU i and stratum h for rural domain.

Y_{hijk} = The observed value of a characteristic y for household k in EA/SSUj, urban center/PSU i and stratum h for other urban domain.

Note: Estimate of total at country level, \hat{Y} , is obtained by summing up stratum/domain total estimates.

$$\hat{Y} = \sum_{h=1} \hat{Y}_h$$

4. Sampling Variance of the Estimates:

Sampling variance of estimate of stratum total are given by the following formulas:

The variance of domain or reporting total estimate is:

$$V(\hat{Y}_h) = \frac{n_h}{n_h - 1} \left[\sum_{i=1}^{n_h} \hat{Y}_{hi}^2 - \frac{\hat{Y}_h^2}{n_h} \right] \text{-----} \quad (4)$$

in which $\hat{Y}_{hi} = W_{hi} \sum_{j=1}^{h_{hi}} Y_{hij}$ for rural and major urban centers domains,

and $\hat{Y}_{hi} = \sum_{j=1}^{n_{hi}} W_{hij} \sum_{k=1}^{h_{hij}} y_{hijk}$ for other urban center domain.

$$V(\hat{Y}) = \sum_h V(\hat{Y}_h) \text{-----} \quad (5)$$

$$SE(\hat{Y}_h) = \sqrt{Var(\hat{Y}_h)} \text{-----} \quad (6)$$

5. Coefficient of Variation (CV) and Confidence Interval (CI)

The following formulas were used to calculate CV and CI of the domain (reporting level) total.

The coefficient of variation (CV) of domain total in percentage is:

$$CV(\hat{Y}_h) = \frac{\sqrt{VAR(\hat{Y})}}{\hat{Y}} * 100 \text{ -----} \quad (7)$$

And ninety-five percent confidence interval (CI) of domain total:

$$\hat{Y}_h \pm 1.96 * SE(\hat{Y}_h) \text{ -----} \quad (8)$$

6. Ratio Estimates:

$$\hat{R}_h = \frac{\hat{Y}_h}{\hat{X}_h} \text{ and } \hat{R} = \frac{\hat{Y}}{\hat{X}} \text{ -----} \quad (9)$$

Where, the numerator and the denominator are estimates of domain totals of characteristic y and x, respectively.

$$Var(\hat{R}_h) = \frac{1}{\hat{X}_h^2} [Var(\hat{Y}_h) + \hat{R}_h^2 Var(\hat{X}_h) - 2\hat{R}_h Cov(\hat{Y}_h, \hat{X}_h)] \text{-----} \quad (10)$$

In which

$$Cov(\hat{Y}_h, \hat{X}_h) = \frac{n_h}{n_h - 1} \left[\sum_{i=1}^{n_h} \hat{Y}_{hi} \hat{X}_{hi} - \frac{\hat{Y}_h \hat{X}_h}{n_h} \right] \text{-----} \quad (11)$$

Estimates of standard error, coefficient of variation and confidence interval for the ratio estimate can be calculated by adopting formulas 6, 7 and 8.

41	Wholesale & Retail Trade - FORMAL SECTOR
42	Wholesale & Retail Trade - INFORMAL SECTOR
51	Service Trade - FORMAL SECTOR
52	Service Trade - INFORMAL SECTOR
61	Renting of House, Land/Plot, Equipment, Machinery, Storage and Drought animals
71	Social Security (Pension provident fund, ... etc)
72	Donation from Gov't /NGO's
73	Remittances- Regularly resived from relatives, family, friends and individuals(local or abroad)
81	Begging (Alimony)
82	Prostitution
01	Other (not else classified)

NOTE ON Q 71-74 & 107

FOR PRIVATE

Hhs with employed persons

Though, persons employed by the Hh for domestic service are considered as members of the Hh as per the criteria of being usual members of a Hh; however, any income/activity of such person has never be accounted to the Hh. Therefore, in Q71-74 of Form 0, section 0.2 and in Q 107 of Form 1 section 1.1, persons who are being employed by the household such as domestic servants, guards, ...etc., should be excluded from being accounted.

FORM 0: GENERAL LIVELIHOOD STATUS OF THE HOUSEHOLD AND ITS MEMBERS

A Hh ID

Region	Zone	Wereda	Town	Sub-city	Kebele	EA	Hh SSO	Hh size

SECTION 0.1 Hh ECONOMIC STATUS

DATA COLLECTION DATE ----- BEGINNING TIME ----- ENDING TIME -----											
51	52	53	54	55	56	57	58	59	60	61	
Does Your Hh has Agricultural Holding ? 1= Yes 2= No (SKIP TO Q 61)	What type of agriculture did the Hh has? 1= Crop production 2= Live stock production 3= Both	CHECK Q 52, IF CODE 1 OR 3 ASK Q 53 - 56 What is the Primary Aim/Intension or Target of the Hh in Producing (CROP GROUP) crop ? 1= For Hh Consumption 2= For Sale/Market 3= Both (equal importance) 4= Doesn't Produce				CHECK Q52, IF CODE 2 OR 3 ASK Q 57-59 What is your Hh's Primary Aim/Intension or Target of producing (LIVESTOCK TYPE) 1= Hh Consumption 2= Sale/Market 3= Both (at equal importance) 4= Other 5= Hasn't				How many times does your Hh usually harvest Temporary Crop Per Year?	What is the Basise Livelihood Type (main Source of Income) that your Hh mainly depend on? (For code see front page)
		Cereals/ Pulses/ Oil seeds	Vegetables/ Root crops	Spices and/ pepper	Fruits/other Cash crops	Cattle/ Goat/ Sheep/ Drought animals/ Camel/ pork	Poultry	Bee			

Section 0.1 (CONT'D) Hh ECONOMIC STATUS

Section 0.2 Hh MEMBER'S PARTICIPATION STATUS

62	63	64	65	71	72	73	74
Has the Hh ever participated in a Safty Net (Inc. Asset Building) Program/Project? 1= Graduated 2= Currently participating 3= Drop out 4= Never	Did any member of the Hh ever Participate in [NAME OF PROJECT] program ? 1= Currently participating 3= Never HIV/AIDS Related Project	2= Had participated Resetelement program	Other, eg. food aid, Relcif, Targetted supplementary Feeding, Food for Education, etc	Over the past year (2002 EC/2010-11), Howmany members of the Hh have started own business? [IF NONE, CODE 0, IF 8 OR OVER CODE 8]	Over the past year (2002/2010-11), how many members of the Hh have got credit facility from Micro Finance Institutions? [IF NONE, CODE 0 IF 8 OR OVER CODE 8]	Over the past year (2002 EC/2010-11), how many members of the Hh have joined a Micro & Small Scale Business Enterprise (MSBE)? [IF NONE< CODE 0, IF 8 OR OVER, CODE 8]	Over the last 3 years (2000-2002/2008/9 - 2010/11), how many members of the Hh benefited from MSBE program? [IF NONE, CODE 0, IF 8 OR OVER CODE 8]

Code	Q 103: Relationship to HhH
00=	Household Head (HhH)

4D	4	4			2 0 0				
4E	4	5			2 0 0				

NOTE: ON Q 503 AND 504

RESPONDENT'S LEVEL

More than one HhM might have been participated in responding to the survey questionnaire, though the degree of participation differs. Therefore, according to the degree of participation, rank each respondent and identify the 1st and the 2nd as primary level respondent and complementary level, respectively. Finally record their Id code.

If a single HhM has been responded for all questions throughout the survey then record its ID in the 1st level and 00 for the 2nd level.

Q 505

SURVEY (DATA COLLECTION) RESULT

11= Completed according to schedule

12= Completed, through a single callback /appointments

13= Completed, through double callbacks/apointments

21 = Completed, but need multi-callbacks/apointments

22= Completed, with the help Effort of supervisor/coordinator

23= Completed, but need help /effort of local administrators

31= Not started, Hh moved from survey area.

32= Interrupted /Not completed, Hh Moved from survey area

41= Not started, Eligible respondent/HhM not present in home

42= Interrupted; Eligible respondent/HhM not present in home

51= Interrupted/Not completed; Hh faced condolanse/semptathize

52= Interrupted/not completed; accident/illness of Hh member

61= Not started; Hh Not cooperate/refuse (Total refusal)

62= Interrupted/Not completed; Hh refuse to cooperate.
