PUBLISHED IN 1995

Preface

Quarterly reports have been published since the commencement of the Quarterly Labour Force Survey programme in 1990, upto fourth quarter 1994. All publications provide national level data, excluding Northern and Eastern provinces, on a regular basis. However, the sub-national level information could not be published due to limitations of sample size. In 1992, a full 12 monthly round survey was conducted and a publication containing district level estimates was released.

As a remedy to the non-availability of regular information at sub-national level, a suggestion had been made in the sample design stage that data at provincial level be produced combining four quarterly samples of the year. Since the quarterly surveys are based on nationally representative samples, a combination of quarters would give estimates with enhanced accuracy at sub-national level as well as at national level. However, this process has not been in operation due to lack of manpower resources in the division in view of it's many other commitments which kept the division involved throughout. In this context, the attempts made by two individual officers namely, Mr. Gamini de Silva, Deputy Director and Miss. N. Arulanandam, Statistical Officer of the Sample Surveys division, to undertake the work and provide extensive tabulations as well as an analysis of data is much valued. The time spent and effort made by these officers amidst their regular responsibilities, should be much appreciated.

Any comments and suggestions by the users for continuation of this publication on an annual basis would be welcome.

Acknowledgements are also due to Mr. K. D. Siripala, Deputy Director, Printing division for attending to printing work of the publication.

23rd June 1995.

A. G. W. Nanayakkara
Director of Census & Statistics.

Chapter 1

Introduction

Quarterly Labour Force Survey (QLFS) has been conducted by the Department of Census and Statistics since 1990. Quarterly reports have been published upto 4th Quarter 1994. These reports were based on the sample surveys carried out in the first month of each quarter. The sample design has been formulated only to provide labour force estimates at national and sectoral levels namely urban and rural sectors. The size of the national quarterly sample is 2520, and excluding Northern and Eastern provinces it is only 2000 Housing Units. Providing estimates below national level has not been possible due to sample size limitations. Therefore a suggestion has been made to combine all four quarterly samples for each year and provide provincial level estimates. Particularly since the planning activity has been decentralized upto provincial council levels, the provision of information at this level was felt to be useful. Four monthly rounds distributed throughout the year were thus taken to provide annual estimates at provincial level. The total combined sample was around 8000 Housing Units excluding the North and the East.

Sample Survey division was entrusted with the conduct of the QLFS in 1992. A full twelve monthly rounds of survey was carried out in 1992 in order to provide estimates at district level. The publication giving district level two-way tabulations have already been published. However, due to limitation of time, tabulations were restricted to only 21 tables which are similar to those published in quarterly survey reports. Therefore, as an experiment, very detail provincial tabulations have been done using 1993 data set in order to depict a full picture of the labour force characteristics of population at provincial level. There are 93 such tabulations in the present report.

The information provided at provincial level would be very useful perhaps except in provinces where the intra-provincial variation is highly significant. For instance, the characteristics between Kandy and Nuwara Eliya may be different in respect of education and unemployment levels. In contrast, the Southern or Western province will have much similar characteristics in districts within the province. Therefore planners and data users need to pay due attention to this aspect too.

The report runs into 7 chapters describing different aspects of Labour Force.

Technical notes

A. Details of Survey

The data is derived from household interviews obtained from a sample survey of the population 10 years of age and older. The survey is conducted quarterly by the Department of Census and Statistics and provides comprehensive data on the Labour Force, the Employed, the Unemployed and includes such characteristics as age, sex, occupation, and industry. The survey also provides information on hours worked, and reasons for unemployment and non-participation in the labour force. The survey is conducted by trained interviewers, from a total annual sample of about 8,000 households excluding Northern and Eastern provinces. The data collected are based on the respondent's activity or labour force status during the preceding week and previous 12 month period.

B. Collection and Coverage

Data are collected quarterly during a similar time period in each quarter through a scientifically selected sample, designed to represent the non-institutional household population. About 2000 households are visited each quarter. Respondents are interviewed to obtain information about each member of the household, 10 years of age or older. The inquiry relates to the previous calendar week of the interview to obtain "current" information, and to the previous 12 calendar months to obtain "usual" activity information.

Inmates of institutions, military camps, and lodging places are not surveyed. Households with more than 5 lodgers and boarders are also excluded from the survey.

C. Concepts and Definitions :

The concepts and definitions underlying the labour force data from this survey differ somewhat from those in previous labour force surveys. Therefore comparisons of data should be made carefully taking into account the concepts and definitions given below:

Labour Force : The Labour Force is composed of the economically active population aged 10 years and over.

Economically Active Population : The economically active population is defined as those persons who were employed or unemployed during the reference period of the survey.

Employed : Employed persons are all household members those who worked as paid employees, employers, own account workers (self-employed) or unpaid family workers, in family enterprises during the reference period. Also included are persons who had a job but were temporarily absent from work because of such reasons as vacation, illness, bad weather, and labour - management disputes etc.. It should be noted that if a person has one or more jobs, that person is counted only once.

Unemployed : Persons who were available and/or looking for work, and had no employment during the reference period, are considered to be unemployed.

Reference Period : In this survey there are two reference periods, "current" and "usual". The "current" reference period is the week preceding the week of data collection, ie. last week. The "usual" reference period is the preceding 12 months, ie., the past 12 months.

Currently Economically Active : A person who was employed or unemployed during the 'current' reference period is considered to be currently economically active.

Currently Employed : A person who works for pay, profit, or unpaid family gain for one(1) hour or more during the reference week is considered to be employed during that period. This includes persons, whether paid or not, with a job but not at work for the various reasons cited above.

Currently Unemployed : A person who did no work but who was looking or available for work during the reference week is considered to be currently unemployed.

Not in Labour Force (not economically active) : Persons who were neither working nor available/looking for work are classified as not in the labour force. This group includes persons engaged in own house work, attending school, unable to work because of long term infirmities, retired, and others. Others include persons voluntarily idle.

MEASURES OF THE LABOUR FORCE :

The working age population is the total non-institutional household population aged 10 years or over.

The participation rate is the proportion of the labour force that is in the working age population.

The labour force is the number of persons classified as employed or unemployed according to the criterion described above.

The unemployment rate represents the number of unemployed persons as a percent of the labour force.

These measures can be cross classified with age, sex, educational attainment and other personal or economic characteristics.

Occupation, Industry, and Employment Status : These details apply in respect of the job held by the currently employed during the reference week. For persons with more than one job, it is usually the main job that is described. However, classifications are also made for the secondary job. Occupation is classified according to the International Standard Classification of Occupations (ISCO), ILO, 1988. Industry is classified according to ILO'S International Standard Industrial Classification. The employment - status classification specifies employment as in the public or private sector employees (wage and salary workers), employers, own account workers (self-employed), and unpaid family workers.

Hours of Work refer to hours actually worked during reference week. If the hours actually worked are less than the hours usually worked, respondents are asked the reasons for working fewer hours, which include the following: illness or injury, strike, vacation, reduction in economic activity, off season inactivity, bad weather, mechanical or electrical failure, and shortage of raw materials.

A Household consists of all persons, related or not, who occupy a housing unit, which could be a house, an apartment, a group of rooms, or a single room when occupied as separate living quarters. Domestic servants, boarders, and lodgers who live and have their meals or share

other essentials of living, with the family are also treated as members of the household. Households with more than 5 lodgers (non-family members paying rent) and boarders, are considered as institutional units and are excluded from the survey. Persons, who usually live here but are temporarily away are included as members of the household, but persons who have usual residence elsewhere, but are present at the time of the interview, are excluded.

Geographic Data : Data in this release is available at national and provincial levels, and further broken down by sector and sex. URBAN areas are those that had an administrative structure of a Municipal Council, an Urban Council, or Town Council in 1981. RURAL areas are those that has not been classified as urban. ESTATES are subsectors of rural areas. Because of current sample size limitations, data cannot be published at the District level or for the Estate category.

D. SAMPLE DESIGN

The survey is conducted quarterly to produce estimates of employment, unemployment, labour force participation and basic demographic characteristics. The scope of coverage includes all households in Sri Lanka.

A stratified two-stage probability sample design is used with census blocks as primary sampling units (PSUs) and housing units as secondary or final sampling units (SSUs). The first level consists of the 19 domains for which separate annual estimates are supposed to be calculated; the nine provinces divided into urban and rural sectors (and the greater colombo area).

The total annual sample size is 10,080 housing units, distributed as 252 blocks (PSUs) per each quarter and 10 housing units (SSUs) per block. The allocation to the domains aims at ensuring approximately equal levels of reliability from domain to domain.

The 1,008 blocks were selected with probability proportional to size from the 1981 Census list of approximately 70,000 census blocks. A listing operation was conducted in each selected block to provide a frame for the second stage of selection. The selection of housing units within blocks was systematic with random start.

**Table - Sample Sizes by Domain of Estimation
(Annual Sample)**

Province	Sector		
	Total	Urban	Rural
National	10,080	5,400	4,680
Greater Colombo *	720	720	-
Western Province (Remainder)	1,080	520	560
Central Province	1,000	520	480
Southern Province	1,080	520	560

Eastern Province #	1,040	520	520
North Western Province	1,040	520	520
North Central Province	1,040	520	520
Uva Province	1,000	520	480
Sabaragamuwa Province	1,040	520	520

* (Colombo MC + Dehiwela - Mt.Lavinia MC + Kotte UC)

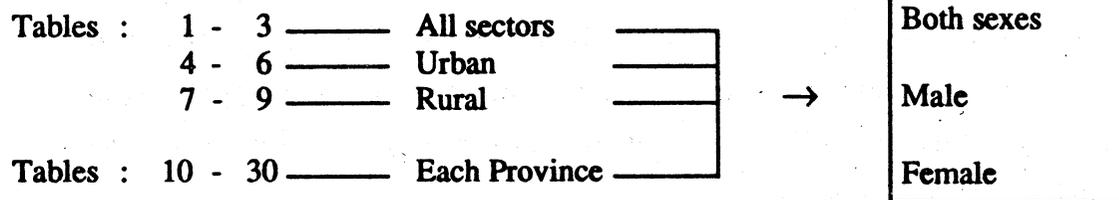

not surveyed since 1990, 1st quarter.

Chapter - 2

Labour force by age

Age distribution of the labour force and population over 10 years is described in detail by 30 tables in this chapter. Tabulations have been presented at (a) sectoral levels (All Sectors, Urban and Rural) (b) different sexes (Both sexes, Male and Female) and (c) provincial levels (for each province).

Structure of tables:

All sectors by sex

Labour Force participation rate in all sectors for both sexes was 49.1% in 1993. Comparative rate for males has been 65.3% and for females 33.1%. Male participation is over 93% in the age range 25 - 49 (5 groups) while female participation is highest (56.5%) in the age group 20 - 24 and declines gradually afterwards except in age range 35 - 44 where slight increase is recorded. Female unemployment rate which is 21.7% is more than twice that of males which is 9.7%. Male labour force is 3989780, almost twice that of females, however, the unemployed numbers for males and females are 387697 and 443286 respectively.

Both sex by sector

Labour force participation rate for urban sector is 44.0% as compared to 50.5% in rural sector. Rural labour force is 4888296, which is over four times as that of urban sector, which is 1144590. Number employed too shows a similar proportional distribution. However, the number unemployed in rural sector is only about 3.5 times as that of urban sector, thus the result being a lower unemployment rate of 13.2% in rural sector as against 16.1% in urban sector.

Each sex by sector

Higher rate of labour force participation and lower rate of unemployment in rural sector than the urban sector can be noticed in respect of both male and female populations. A major difference is seen in the case of labour force participation rate of females, between rural sector and urban sector, where 35% participate in labour force in rural sector while in urban sector the figure is only 25%.

Tables 10 - 30 describe the population of years 10 and over and the labour force in each province by age, for each sex. Comparison in this section could mainly be done on differences of labour force participation rate, employed and unemployed (by age) between sexes within each province. Information in respect of each province is given separately enabling the users to analyze the data in detail.

Chapter - 3

Labour force by province

This chapter describes the differences of labour force participation rate, employed and unemployed between provinces by sex and sector.

Structure of tables:

Tables :	31 - 33	_____	All sectors	≡	→	Both sexes Male Female
	34 - 36	_____	Urban			
	37 - 39	_____	Rural			

All sectors by province (both sex)

By province level, highest contributor to the labour force is the Western province while the lowest is the Uva province. The labour force participation rate is highest in the North Central province with a figure of 56.3% followed by 51.9% in the Central province. Unemployment rate is over 16% in the provinces of Western and Southern. Unemployment rate is lowest in North Central and Uva provinces. Though Nuwara eliya and Matale usually have lower unemployment rates, higher rate existed in the Kandy district would have kept the Central province in a higher level of unemployment.

Between sectors (both sex)

In the urban sector, the labour force participation rate for all provinces for both sexes is in a small range of 40.1 - 44.6 percent. In the rural sector, a very high figure of 57.2% of labour force participation rate was recorded in the North Central province while North Western province has recorded a comparatively lower figure of 46.9%.

The unemployment rate is highest in Southern province and lowest in North Western province, in urban sector. Unemployment rate in rural sector is highest in the Western province (17.3%) followed by the Southern province (15.4%). Rural unemployment is significantly lower in the provinces of North Central and Uva.

All sectors (by sex):

For males, very high labour force participation rates, above 63%, have been recorded in all the provinces, North Central province leading with a figure of 70.4%. Female rates are always within 40% except in North Central province which has a figure of 41.4%.

Unemployment rate is less than 10% in five out of seven provinces for males; Higher figures were recorded for Southern and Western provinces and the lowest 5.2% for North Central province. For females, higher unemployment rates were recorded over 20%, except in provinces of North Central and Uva which recorded 11.6 and 10.7 percent respectively.

Sectors by Sex:

Males

Rural labour force participation rates in six provinces are higher than the urban sector, for males, except in the Western province where urban sector has recorded a figure of 64.3 and rural sector a figure of 63.5 percent. Unemployment rates in rural sector is lower than that of urban sector in all provinces. In Southern province both sectors have recorded the highest rates. In the North Central province, the rural rate (4.8%) is significantly lower than the urban figure (12.1%).

Females

Labour force participation in rural sector is significantly higher than that of urban sector in all provinces for females. Highest rate of 42.8% has been recorded in the North Central province in rural sector. Lower participation rates are also recorded in North Western province in respect of both sectors. Contrasting results can be observed in regard to unemployment rates between sectors. Except in the Western province, comparatively higher rates have been recorded for all other provinces in the urban sector. In the North Central and Uva provinces, considerably low unemployment rates were recorded in rural sector when compared to other provinces.

Chapter - 4

Employed population by education and employment status

Structure of tables

Tables :	40 - 45	By province and education (with percentages)	→	Both sexes Male Female
	46 - 51	By province and emp. status (with percentages)		

Education by province

Both sexes

Western province recorded the highest percentage of employed population who are educated upto G.C.E(O/L) and above (37%), followed by Southern province (26.5%). Two provinces, namely, North Central province and Uva province lag behind with less than 20%, and Uva having the lowest percentage of 16%. Rest of the provinces too are below the average level of 26%. Highest 'No schooling' percentages are recorded from Central and Uva provinces possibly due to contribution from plantation sector in Nuwara eliya and Badulla districts respectively.

Between sexes

The most significant feature in the pattern of distribution of employed persons between different education groups by sex is the female dominance in 'No schooling' category in all provinces except Western province. Though the absolute number in the highest educational group is slightly lower than that of males as a total, the percentage is significantly higher for females. The female dominance in highest education category is also observed in the Central and Southern provinces.

Another interesting feature is the significant difference in the percentage of G.C.E (O/L) and above categories between sexes in Western, Southern and North Central provinces. In Western province there is only 35% males who are G.C.E (O/L) and above qualified as compared to females who are 43%. The corresponding figures for Southern province and for North Central province are 23% males for 33% females, and 13% males for 23% females respectively.

Employment status by province

Both sexes

Western province has recorded the highest number of 'total employed' as well as employees (both public and private sector), employers and own account workers. Western province is followed by Central province except in the case of own account worker. Higher numbers of own account workers are recorded in Southern and North Western provinces. Largest number of unpaid family workers are recorded in North Central province followed by Central province. Western province is dominated by private sector employees followed by public sector employees and own account workers. Private sector 'employees' category dominates in all provinces except in North Central province where own account workers dominate.

Between sexes

Males dominate in all employment categories in all provinces except in 'unpaid family worker' category where males dominate only in Western and Sabaragamuwa provinces. In percentage terms, there are marked differences in percentages between sexes in the categories of own account worker and unpaid family worker as follows; Males recorded higher percentages in own account worker category, while females recorded higher percentages in unpaid family worker category.

Chapter - 5

Employed by occupation / industry

Structure of tables

Tables :	52 - 60	Occupation by province (with % in coloumn & row)	→	Both sexes Male Female
	61 - 69	Industry by province (with % in coloumn & row)		

Occupation by province

Both sexes

Predominant occupation of the employed population in all provinces except Western province is 'Skilled agriculture & fishery worker'. Highest percentage recorded is from North Central province with a figure of 70.9%. Western province has a well distributed working population among many occupations, with comparatively high figures recorded in occupational groups such as, Technicians, Clerks, and Sales & service workers. A very low figure of 8.7% is recorded in 'Skilled agricultural & fishery workers' category in Western province. There is also low figures which are recorded for 'Craft & related workers' category in North Central province as well as in Uva province.

When considering the contribution to each occupational category by province, it can be noted that Western province dominates in all categories except in 'Skilled agriculture & fishery workers'. Western province has only 8% percent out of total Agricultural workers while North Central province, North Western province and Central province have nearly 19% each.

Between sexes

Female dominance is noted in occupational category 'Professionals'; the main occupations in the category being teachers and health sector employees. For each sex, Agriculture predominates in provinces other than in Western province. In Western province, predominant occupation for males is 'Elementary occupation' while for females it is 'Craft & related workers'.

Western province makes the highest contribution to all occupations other than for 'Agriculture' and 'Elementary workers' for each sex. In the 'Agriculture workers' category highest contribution comes from North Western province by males and from Central province by females, the two provinces representing paddy cultivation and tea cultivation respectively. Males in the Western province constituted the largest portion in the 'Elementary occupation' category too while females in Central province constituted the largest portion in this occupation category.

Industry by province

Both sexes

Agriculture serves as the predominant industry of the employed population other than in Western Province. In the Western province a balance distribution among industries can be seen with significantly higher percentages recorded in Manufacturing (20.7), Trade and Hotels (15.7) and Personal services (24.7). Southern and North Western provinces too have shown higher percentages in Manufacturing sector; percentages being 13.6 and 14.7 respectively. Insurance & real estates shows a low level of involvement in provinces such as Uva and North Central provinces. 'Electricity & gas', by and large is the lowest industrial sector as far as the employment is concerned. 'Mining & quarrying' shows a higher involvement in Sabaragamuwa province and in Western province. Dominance in Agriculture is remarkably high (over 50%) in North Central province followed by Uva and Central provinces.

When the provincial contribution to each industrial sector is concerned, Western province leads, other than in Agriculture, and Mining & quarrying where Central province and Sabaragamuwa province respectively have the lead. The highest disparity in provincial distribution of workers by industry is seen in the Insurance & real estate sector where 60% is employed in the Western province and the rest 40% is distributed in other six provinces with the lowest being 1.2% in Uva province. Significant figures are also noted in respect of Electricity, gas & water in Southern province (20%) and Central province (16%), Construction and Manufacturing in Southern and North Western provinces (16% and 15% in each province), Trade & hotels in Central province (17%).

Between sexes

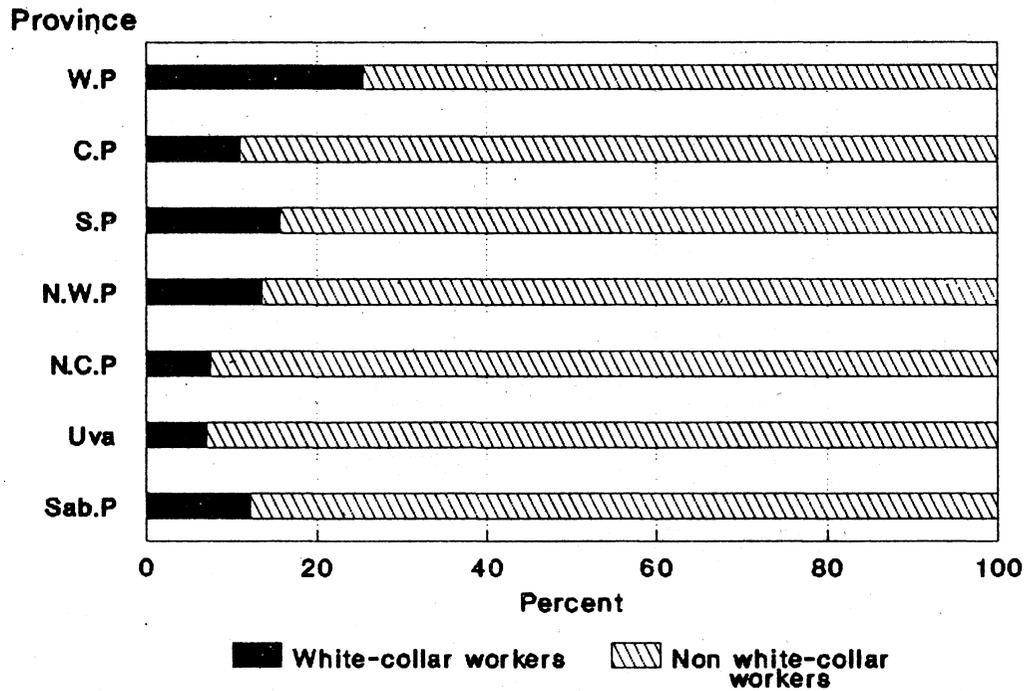

The salient feature in the industrial distribution between sexes is the female dominance in Manufacturing sector. This is particularly seen in the Southern province (59404 females against 41098 males), in North Central province (11435 females against 8088 males) and in Sabaragamuwa province (44224 females against 25316 males).

For males, while Agriculture being the predominant industry in all provinces other than in Western province (where Trade & hotels and Personal services dominate), Personal services and Trade & hotels have occupied the next ranks among the industries, except in the case of North Western province where Manufacturing leads over Trades & hotels.

For females, while Agriculture dominates in provinces other than in Western province (where Manufacturing and Personal services dominate), Personal services and Manufacturing have occupied the next ranks among the industries.

When the provincial contributions to each sector is concerned, it could be seen that Western province has the dominance in all sectors other than in Agriculture and Mining & quarrying, for each sex. While Central province dominates the Agricultural sector for each sex, males in Sabaragamuwa province and females in Western province dominate Mining & quarrying sector. Significant contributions to Mining & quarrying sector by females in Southern and North Western provinces could also be noted. It may also be noted that only negligible number of females work in Electricity, gas & water sector in many provinces other than in the Western province.

Fig 3 - Employed by province and occupation

Occupational category :

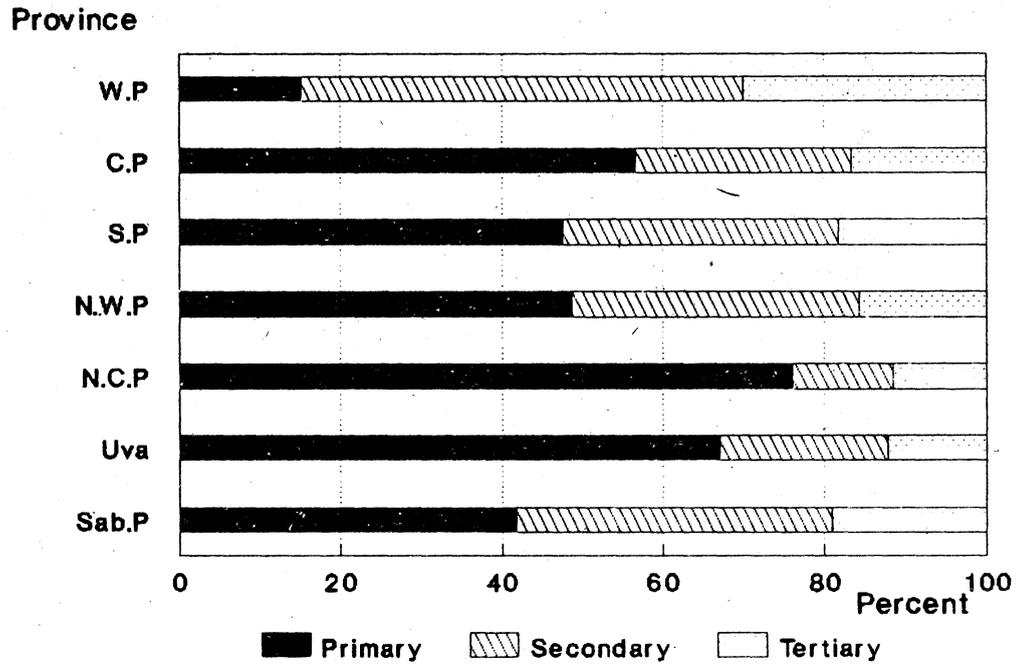

White-collar workers -

1. Senior officials and managers
2. Professionals
3. Technicians and associate professionals
4. Clerks

Non white-collar workers -

1. Sales and service workers
2. Skilled agricultural and fishery workers
3. Craft and related workers
4. Plant and machine operators and assemblers
5. Elementary occupations

Fig 4 - Employed by province and industry

Industrial category :

Primary -

1. Agriculture etc.

Secondary -

1. Mining and quarrying
2. Manufacturing
3. Electricity, gas and water
4. Construction
5. Trade and hotels etc.
6. Transport, storage and communication

Tertiary -

1. Insurance and real estate
2. Personal services

Chapter - 6

Employed population by hours worked

Structure of tables

Employed by industry and hours worked

Both sexes

It can be seen that people spend more time on Agriculture as an industry followed by Personal services, Manufacturing and Trade & hotels etc.. It may also be seen that people work longer weekly hours in these industries. Hour category where highest number employed in each industry mentioned above is as follows:

Agriculture, Manufacturing and :- Personal services 40 - 49 hours per week

Trade & hotels etc. :- 50 + hours per week

Percentage table suggests that number employed in the 0 - 9 hour group (shorter working hours) is very much significant in industries such as Mining & quarrying, Construction and Agriculture. Casual nature of work or employments with shorter working hours, is very small in sectors of Trade & hotels, and Insurance & real estate.

Between Sexes

Dominance in Manufacturing sector and the very low participation in Construction, Transport, Storage & communication, and Trade & hotels sector by females can be observed. Females contribute largely to the Personal services sector too. A very high percentage of females with low working hours is recorded in the Mining & quarrying sector.

Employed by province and hours worked

Both sexes

Western province contributes the most number employed, followed by Central, Southern and North Western provinces. High incidence of casual nature work or working lesser hours can be seen in the North Central province and in North Western province followed by Western province.

Between sexes

Little variation between sexes at provincial level is noted in the distribution of employed persons by hours of work. The pattern for both males and females is not very different from the description in 'both sexes' group above.

Chapter - 7

Unemployment by education / age by province

Structure of tables

Tables : 82 - 87

Education by province
(with rates)

88 - 93

Age by province
(with rates)

→

Both sexes

Male

Female

Education by province

Both sexes

It could be seen that the highest number of unemployed are from Western province followed by Southern province and Central province. Unemployment rate also takes the same order. Unemployed persons are concentrated in the primary level of education group { Grade 5 upto G.C.E (O/L) } followed by secondary level of education group G.C.E(A/L) . However, when the rate of unemployment in each category is taken into consideration, it can be seen that in all provinces the highest rate is in secondary education level, with slight deviations in Southern and North Central provinces. At provincial level, highest incidence in a single level of education is recorded in Central province with an unemployment rate of 38.9% followed by Uva and Sabaragamuwa provinces with rates over 30% in G.C.E (A/L) group. Unemployment among 'No schooling' (least educated) and 'Degree' and above (most educated) population show a lower incidence than the rest of the population in most of the provinces except in Central and North Central provinces where high rates are recorded for 'Degree' and above levels (10.7% and 13.8%, respectively).

Between sexes by provinces

Significant difference in the incidence of unemployed between provinces and sex, is recorded in Central and North Western provinces where females exceed males in number. This is true for other provinces too with lower magnitudes, except for Southern and Uva provinces where the trend is opposite.

In the case of females, the highest unemployment rate of 53.5% is recorded for Central province in the secondary level of education category of G.C.E (A/L). Negligible incidences are recorded in 'No schooling' category for females in most of the provinces. However, for females who are educated up to primary and secondary levels, { ie. from grade 5 upto G.C.E (A/L) }, a comparatively higher incidence of unemployment than for males can be observed in all provinces. Female unemployment is higher in higher education groups while male unemployment is generally lower than that of females.

By age and province

Both sexes

Highest incidence (number) of unemployment is seen in the age group 20 - 24 in all provinces. Higher rates of unemployment are recorded in age group 15 - 19 with exceptions in North Western and Central provinces where rates are higher for age group 10 - 14, however, the numbers involved are small. High rates are also recorded in 25 - 29 group for Southern, Western and Sabaragamuwa provinces.

Between sexes by province

Unemployed female population is generally higher, in the age range 20 - 44 years than that of male. However, lower incidence of unemployment is recorded in North Central and Uva provinces for over 25 years age groups, for females. Central province has the highest rate of unemployment, above 50%, for females in age range 10 - 24. Though higher rates are recorded in age range 10 - 14 in Sabaragamuwa province too, the numbers could be considered very small.

Male unemployment is acute in age range 15 - 24 in all provinces except in North Central province where the incidence is lower (17.2% and 11.4% respectively in age groups 15 - 19 and 20 -24).
