

# Industry classification

## [Up one level](#)

The data in Investment Map is adapted from Revision 3.0 of the International Standard Industrial Classification of all Economic Activities (ISIC).

ISIC is defined by the [United Nations Statistics Division](#) and is a standard classification of economic activities (including both merchandise and services) arranged so that entities can be classified according to the activity they carry out. The classification was approved in 1948 and is based on four levels. The following revisions have been made : ISIC Rev.1 (1958), ISIC Rev.2 (1968) and ISIC Rev.3.0 (1989). ISIC Rev.3.1 update, effective May 2002, supersedes ISIC Rev.3.0.

Revision 3.0, level 1 includes 17 sections identified by alphabetical letters A to Q, level 2 covers 62 divisions identified by two-digit numerical codes and level 3 is defined by 161 groups identified by three-digit numerical codes. The Table below shows the first two levels of Revision 3.0 and their equivalent in Revision 2.0.

Most countries do not report FDI data in ISIC Rev 3.0 and hence some adaptations have been made in Investment Map.

The main differences between Investment Map and ISIC Rev. 3.0 lie in the definitions of levels and the creation of additional residual categories, such as "Unspecified Secondary" or "Unspecified chemicals and chemical products" which have been introduced primarily in order to capture FDI data that cannot be classified accurately. For example, when a country only provides the total FDI data for the manufacturing sector, without any further breakdown, the data is allocated to industry "Unspecified Secondary".

Level 1 in Investment Map has been created in order to analyse the FDI and Trade data for the main sectors of the economy (see Table 2). For ease of use, economic activities are referred to as industries in Investment Map.
