## TABLE OF CONTENTS

<b>Organization Chart</b>	i
<b>Foreword</b>	iii
<b>1. INTRODUCTION</b>	
1.1 Historical Background	1
1.2 Justification	1
1.3 Objectives	1
1.4 Census Legislation	3
1.5 Scope	3
1.6 Coverage	4
1.7 Time References	5
1.8 Enumeration Period	5
1.9 Type of Enumeration	5
1.10 Census Frame	5
1.11 Cartography	5
1.12 Organization of the Census	6
1.13 Preparatory Work	6
1.14 Post Enumeration Activities	7
<b>2. MAIN CONCEPTS AND DEFINITIONS</b>	
2.1 Holding or Farm	8
2.2 Agricultural Holder	8
2.3 Household	9
2.4 Parcel	9
2.5 Land Tenure	10
2.6 Land Use	10
<b>3. MAIN CENSAL RESULTS AND THEIR COMPARISON WITH PREVIOUS CENSUSES</b>	
3.1 Evolution of Agriculture in St. Lucia	12
3.2 Number of Holdings	12
3.3 Land Area in Agriculture	13
3.4 Changes in Land Concentration	15
3.5 Land Tenure	18
3.6 Land Use	18
3.7 Livestock	22
3.8 Machinery and Equipment	23
3.9 Selected Agricultural Practices	24
3.10 Population and Employment	24
3.11 Main Holder's Characteristics	28

## 4. STATISTICAL TABLES

### 4.1 A. Tables – General Tables at Administrative District Level

A1.	Main Characteristics of Holdings by Administrative Districts	30
A2.	Main Characteristics of Holdings below the Cut-Off Limits	31
A3.	Number of holdings by legal status of holder and by Administrative District.	32
A4.	Area of holdings (acres) by legal status and by Administrative District.	33
A5.	Number of holdings by size group of total holding area and by Administrative District.	34
A6.	Area of holdings (acres) by size group of total holding area and by Administrative District	35
A7.	Number of holdings by size group of agricultural land and by Administrative District.	36
A8.	Area of holdings (acres) by size group of agricultural land and by Administrative District.	37
A9.	Number of holdings by size group of cropland and by Administrative District.	38
A10.	Area of holdings (acres) by size group of cropland and by Administrative District.	39
A11.	Number of single-holding households <sup>1</sup> by size group of total holding area and by sex of holder and by Administrative District.	40
A12.	Number of parcels by land use and Administrative District.	41
A13.	Area parcels (acres) by land use and by Administrative District.	42
A14.	Number of single-holding households by age group and main occupation of holder and by Administrative District.	43
A15.	Number of single-holding households by size of holder's household and by Administrative District.	44
A16.	Area of holdings in single-holding households (acres) by size of holder's household and by Administrative District.	45
A17.	Number of holdings by number of parcels (landless holdings excluded) and by Administrative District.	46
A18.	Number of parcels by form of tenure and by Administrative District.	47
A19.	Area of parcels (acres) by form of tenure and by Administrative District.	48
A20.	Number of holdings by main occupation/activity of holder, by size group of total area and by Administrative District.	49
A21.	Area of holdings by main occupation/activity of holder, by size group of total area and by Administrative District.	50
A22.	Number of single-holding households by sex and age group of holder and by Administrative District.	51
A23.	Area of holdings in single-holding households by sex and age group of holder and by Administrative District.	52

---

<sup>1</sup> “Single-holding households” corresponds to “Individual holdings” in the tables of the 1996 St Lucia Census of Agriculture

#### 4.1 A Tables – General Tables at Administrative District Level - Continued

A24.	Number of single-holding households by type (permanent/occasional) of household members agricultural workers and by Administrative District.	53
A25.	Area of holdings in single-holding households by type (permanent/occasional) of household members agricultural workers and by Administrative District.	54
A26.	Number of holdings in single-holding households by average number of hours worked on holding by Administrative District.	55
A27.	Number of single-holding households by type (household/non-household members) of agricultural workers and by Administrative District.	56
A28.	Area of holdings in single-holding households by type (household/non-household members) of agricultural workers and by Administrative District.	57
A29.	Number of agricultural workers (household/non-household members) in single-holding households by sex and group of age and by Administrative District.	58
A30.	Number of holdings reporting planted forest land by specie planted and by Administrative District.	59
A31.	Number of holdings reporting forest and woodland and producing non-timber products by type of non-timber product and by Administrative District.	60
A32.	Number of holdings reporting forest and woodland and producing charcoal by periodicity of production and by Administrative District.	61
A33.	Number of holdings reporting forest and woodland and gathering firewood by periodicity of gathering and by Administrative District.	62
A34.	Number of holdings reporting permanent crops by crop and by Administrative District.	63
A35.	Area of coconut, banana and plantain in compact plantation by Administrative District.	64
A36.	Number of holdings by crop status of coconut, banana and plantain in compact plantation and by Administrative District.	65
A37.	Number of holdings reporting permanent crops interplanted in compact plantation and scattered trees and by Administrative District.	66
A38.	Number of trees (scattered) in holdings by type and by Administrative District.	67
A39.	Number of trees bearing (scattered) in holdings by type and by Administrative District.	68
A40.	Number of trees abandoned (scattered) in holdings by type and by Administrative District.	69
A41.	Number of reporting holdings growing specific temporary crops by crop and end use and by Administrative District.	70
A42.	Number of reporting holdings with greenhouses and by Administrative District.	73

#### **4.1 A Tables – General Tables at Administrative District Level – Continued**

A43.	Number of reporting holdings by type of livestock by Administrative District.	74
A44.	Number of livestock and beehives in holdings by type of livestock (heads of livestock and number of beehives) and by Administrative District.	75
A45.	Number of reporting holdings by type of agricultural machinery and equipment owned and used on holding and by Administrative District.	76
A46.	Number of machinery and equipment by type owned by agricultural holders and by Administrative District.	77
A47.	Area of reporting holdings (acres) by type of agricultural machinery and equipment used on holding and by Administrative District.	78
A48.	Number of holdings reporting use of fertilizer by type of fertilizers used and by Administrative District.	79
A49.	Number of holdings reporting agricultural practices by type of practice and by Administrative District.	80
A50.	Area of holdings (acres) reporting agricultural practices by type of practice and by Administrative District.	81
A51.	Number of parcels reporting soil conservation practices by type of practice and by Administrative District.	82
A52.	Area of holdings (acres) reporting soil conservation practices by type of practice and by Administrative District.	83
A53.	Number of reporting holdings with holders belonging to farm organizations by type of organization and by Administrative District.	84
A54.	Number of single-holding households by sex of holder and by proportion of household income from agriculture and by Administrative District.	85
A55.	Area of single-holding households (acres) by sex of holder and by proportion of household income from agriculture and by Administrative District.	86
A56.	Number of single-holding households by sex of holder, by other activities of household members and by Administrative District.	87
A57.	Number of members of single-holding households involved in other activities by type of activity, sex and income received and by Administrative District.	88
A58.	Area of single-holding households by sex of holder, by other activities of household members and by Administrative District.	91

#### **4.2 B. Tables – Cross Tables at National Level**

##### **4.2.1 B1 - Main Classification Criterion: Total Holding Area and Agricultural Area**

B1.1	Number of holdings by legal status of holder and by total area.	92
B1.2	Area of holdings (acres) by legal status of holder and by total area.	93

#### 4.2.1 B Tables -- Main Classification Criterion: Total Holding Area and Agricultural Area - Continued

B1.3.	Number of single-holding households by sex of holder and groups of age and by total area.	94
B1.4.	Area of holdings in single-holding households (acres) by sex of holder and groups of age and by total area.	95
B1.5.	Number of single-holding households by sex of holder and groups of age and by agricultural area.	96
B1.6.	Area of holdings in single-holding households (acres) by sex of holder and groups of age and by agricultural area.	97
B1.7.	Number of total members of holder's household in single-holding households by sex and groups of age and by total area.	98
B1.8.	Number of single-holding households by holder's household size and by total area.	99
B1.9.	Area of holdings in single-holding households (acres) by holder's household size and by total area.	100
B1.10.	Number of holdings by average number of hours worked per day on holding and by total area.	101
B1.11.	Number of members of single-holding households working permanently on holding by total area.	102
B1.12.	Number of single-holding households by number of members of holder's household working permanently on holding by total area.	103
B1.13.	Number of holdings by main occupation/activity of holder and by total area.	104
B1.14.	Area of holdings (acres) by main occupation/activity of holder and by total area.	105
B1.15.	Number of permanent agricultural workers by sex, type (paid/unpaid and full- time/part-time)) and age groups and by total area.	106
B1.16.	Number of parcels by land tenure type and by total area.	107
B1.17.	Area of parcels (acres) by land tenure type and by total area.	108
B1.18.	Number of holdings by land use classes and by total area.	109
B1.19.	Area of holdings (acres) by land use classes and by total area.	110
B1.20.	Number of parcels by parcels on holding and by total area	111
B1.21.	Number of holdings by size groups of cropland and by total area.	112
B1.22.	Area of holdings (acres) by size groups of cropland and by total area.	113
B1.23.	Number of holdings reporting permanent crops by crop and by total area.	114
B1.24.	Area of coconut, banana and plantain in compact plantation by total area.	115
B1.25.	Number of trees of permanent crops (scattered) reported by crop and total area.	116
B1.26.	Number of holdings with temporary crops by crop, end use and by total area.	117
B1.27.	Heads of livestock and number of beehives by type of livestock and total area.	120
B1.28.	Number of holdings reporting use of fertilizers by type of fertilizer and by total area.	121
B1.29.	Area of holdings reporting use of fertilizers (acres) by type of fertilizer and by total area.	122

#### **4.2.1 B Tables – Main Classification Criterion: Total Holding Area and Agricultural Area- Continued**

B1.30. Number of holdings reporting use of pesticides by type of pesticide and by total area.	123
B1.31. Area of holdings reporting use of pesticides (acres) by type of pesticide and by total area.	124
B1.32. Number of holdings reporting use of machinery/equipment by type and by total area.	125
B1.33. Number of specified types of machinery/equipment owned by holders by type and by total area.	126
B1.34. Number of holdings reporting specific agricultural practices by type of practice and by total area.	127
B1.35. Number of parcels of holdings reporting soil conservation practices by type of practice and by total area.	128
B1.36. Area of parcels (acres) reporting soil conservation practices by type of practice and by total area.	129
B1.37. Number of reporting holdings with holders belonging to farm organizations by type of organization and by total area.	130
B1.38. Number of single-holding households by sex of holder and by proportion of household income from agriculture and by total area.	131
B1.39. Area of single-holding households (acres) by sex of holder and by proportion household income from agriculture and by total area.	132
B1.40. Number of single-holding households by sex of holder, by other activities of household members and by total area.	133
B1.41. Area of single-holding households by sex of holder, by other activities of household members and by total area.	134
B1.42. Number of single-holding households with women responsible for different farming activities by farming activity and by total area.	135
B1.43. Number of holdings by sex, type (paid/unpaid and full-time/part-time) and age group of permanent agricultural workers and by total area.	136
B1.44. Area of holding (acres) by sex, type (paid/un-paid and full-time/part-time) and age group of permanent agricultural workers and by total area.	137

#### **4.2.2 B2 - Main Classification Criterion: Cropland**

B2.1. Number of single-holding households by sex of holder and age and by cropland area.	138
B2.2. Area of holdings in (acres) by sex of holder and age and by cropland area.	139
B2.3. Number of holdings by legal status of holder and by cropland area.	140
B2.4. Area of holdings (acres) by legal status of holder and by cropland area.	141
B2.5. Number of single-holding households by holder's household size and by cropland area.	142
B2.6. Area of holdings in single-holding households (acres) by holder's household size and by cropland area.	143
B2.7. Number of holdings by main occupation/activity of holder and by cropland area.	144

#### **4.2.2 B2 - Main Classification Criterion: Cropland - Continued**

B2.8. Area of holdings (acres) by main occupation/activity of holder and by cropland area.	145
B2.9. Number of holdings by sex, type (paid/unpaid and full-time/part-time) and age of permanent agricultural workers and by cropland area.	146
B2.10. Area of holdings (acres) by sex, type (paid/unpaid and full-time/part-time) and age of permanent agricultural workers and by cropland area.	147
B2.11. Number of holdings by total area by cropland area.	148
B2.12. Area of holdings (acres) by total area by cropland area.	149

#### **4.2.3 B3 - Main Classification Criterion: Number of Permanent Workers**

B3.1. Number of holdings by legal status of holder and by number of permanent agricultural workers	150
B.2. Number of holdings by sex, type (paid/unpaid and full-time/part-time) and age of permanent agricultural workers and by number of permanent agricultural workers.	151
B3.3. Number of permanent agricultural workers by sex, type (paid/unpaid and full-time/part-time) and age and by number of permanent agricultural workers.	152
B3.4. Number of holdings by total area by number of permanent agricultural workers	153
B3.5. Area of holdings (acres) by total area and by number of permanent agricultural workers	154

#### **4.2.4 B4 - Main Classification Criterion: Land Tenure**

B4.1. Number of parcels in holdings by legal status of holder and by type of land Tenure	155
B4.2. Area of parcels in holdings (acres) by legal status of holder and by type of land tenure.	156
B4.3. Number of parcels in holdings by total area and by type of land tenure.	157
B4.4. Area of parcels in holdings (acres) by total area and by type of land tenure.	158
B4.5. Number of parcels in holdings by land use and by type of land tenure	159
B4.6. Area of parcels in holding by land use and by type of land tenure	160

#### **4.2.5 B5 - Main Classification Criterion: Legal Status**

B5.1. Number of parcels in holdings by land use and by legal status of holder.	161
B5.2. Area of parcels (acres) in holdings by total use and by legal status of holder.	162

#### **4.2.5 B5 - Main Classification Criterion: Legal Status**

B5.3. Number of holdings reporting use of machinery or equipment by type and by legal status of holder.	163
B5.4. Number of specified types of machinery or equipment by type and by legal status of holder.	164

#### **4.2.6 B6 - Main Classification Criterion: Size of Holder's Household**

B6.1. Number single-holdings households by sex of holder and age and by size of holder's household.	165
B7.2. Area of holdings in single-holding households (acres) by sex and age of holder and size of holder's household.	166

#### **4.2.8 B8 - Main Classification Criterion: Sex and Age of Holder**

B8.1. Number of single-holding households by main occupation, sex and by age of holder	167
B8.2. Number of single-holding households reporting use of machinery/ equipment by type and by age of holder.	168
B8.3. Number of specified types of machinery or equipment in single-holding households by type and by holder's age.	169
B8.4. Number of single-holding household reporting specified agricultural practices and type of practice and by sex and age of holder.	170
B8.5. Number of members of holder's household of 15 years old and more by type of work on holding and by sex, and age of holder.	171
B8.6. Number of single-holdings by sex, type and age of permanent agricultural workers and by sex of holder	172
B8.7. Number of parcels by size of parcels and by sex and age of holder.	173
B8.8. Number of single-holding households by sex and age of persons responsible for different farming activities	174

# 1. INTRODUCTION

## 1.1 Historical Background

St Lucia had conducted its last Census of Agriculture in 1996. Previous Agricultural Censuses had been taken in 1946, 1961, 1973/74 and 1986. Therefore, the 2007 St Lucia Census of Agriculture is the country's sixth agricultural census.

Since the Census of Agriculture in 1996 several changes have occurred in the country, which have strongly impacted on the agriculture sector and the national economy in general.

## 1.2 Justification

The period prior to 1996 that is 1990 to 1995 agriculture contribution to GDP averaged 12.02%. The sector contribution to total domestic exports during that same period was 61%. The successive five (5) year periods from 1997 to 2001 and 2002 to 2006 reported GDP averages of 72% and 43% respectively, whilst, the contribution of agriculture to domestic exports was just over 62% and 43% respectively for the aforementioned five year periods.

Banana continue to be the dominant export crop of the island contributing over 70% of total agricultural exports for the 2002 – 2006 period. Banana contribution to total exports declined to a low of 27% in 2002 and attained a high of 46% in 2006, a decline from the average of 59% over the previous twelve (12) years.

As foreign exchange earnings and government revenue are linked to exports the impact of the overall performance of the agricultural sector affects not only the trade balances and economic growth rates but also government revenue.

It is envisaged that the results of the census will provide a comprehensive and up to date set of data for the agriculture sector which will guide policy formulation and development. It will also provide guidance and support to the monitoring and evaluation of agricultural projects, more so those intended to increase food production and exports, whilst reducing imports and the overall enhancement of the standard of living of the rural communities and the country as a whole. As the government continue to embark on its agricultural diversification strategy programmes, within the context of the medium strategy for the consolidation of the banana industry.

## 1.3 Objectives

The 2007 Census of Agriculture (CAF) had the following **main objectives**:

1. To provide data on the structure of agriculture, especially for small administrative units.
2. To provide data to be used as benchmarks for current agricultural statistics.

3. To provide frames for agricultural sample surveys.
4. To provide data to help monitor progress towards global development targets, in particular the Millennium Development Goals (MDG's).
5. To increase the capabilities of the Corporate Planning Unit in the Ministry of Agriculture, Forestry and Fisheries, to plan, design, collect, process, analyze and disseminate agricultural information.

It had the following **specific objectives**:

1. To provide information at national level, administrative district level and enumeration district level on:
  - i) Number, area, number of parcels and form of tenure of agricultural holdings.
  - ii) Legal status of holders.
  - iii) Agricultural land utilization.
  - iv) Sex, age, main occupation of individual holders and size of their households.
  - v) Proportion of household income from agriculture.
  - vi) Agricultural labour force.
  - vii) Holdings growing specific crops, area under these crops and the spatial distribution of crops.
  - viii) Number and type of livestock.
  - ix) Equipment and selected agricultural practices on holdings.
2. To feed with desegregated information the Geographic Information System (GIS) of the Ministry of Physical Development, Housing, Urban Renewal and Local Government.
3. To train technical personnel on census taking, data processing, sample surveys and data analysis.
4. To set the basis for:
  - i) The establishment of a system of "current" agricultural statistics on planted and harvested area, production, yield and forecasting at the Corporate Planning Unit (CPU) level.

- ii) The establishment of a system of “current” agricultural statistics on livestock at the CPU
  - iii) In-depth surveys on agricultural practices, costs of production, environmental conservation, agricultural labor force, marketing of agricultural products, credit, income, consumption and the living conditions of farmers and their families, the role of women in the agricultural sector, etc.
5. To provide information for studies on agricultural and agricultural-related projects.

The 2007 St Lucia Census of Agriculture was undertaken under the framework of the World Programme for the Census of Agriculture 2010 of the **FAO**<sup>1</sup>

#### 1.4 Census Legislation

The 2007 Census of Agriculture was conducted in accordance with the Statistical Act No. 13 of 1973, more specifically sections 6, 7, 8, 9, 10, 11, 12, 13, and 14. For this particular census the Cabinet of Ministers of the Government of St. Lucia approved a Censal Decree.

The Censal Decree established the following:

- i) year of census taking,
- ii) the reference year,
- iii) the main objectives of the census,
- iv) the main data to be collected,
- v) the coverage,
- vi) the office responsible for taking the census,
- vii) the official appointment of the National Census Advisory Committee and
- viii) the specific provisions of the Statistical Act 1973 applied to the census.

#### 1.5 Scope

The scope of the 2007 St Lucia CAF is to measure the structure of the agricultural sector in the country. It covered the economic activities of Groups 011, 012 and 013 of the Industrial Standard International Classification (ISIC) of Economic Activities (2004). These groups are:

- i. **Group 011: Growing of crops; market gardening; horticulture.**
- ii. **Group 012: Farming of animals.**
- iii. **Group 013: Growing of crops combined with farming of animals (mixed farming)**

In particular, the 2007 St Lucia Census of Agriculture collected data on the following variables:

---

<sup>1</sup> A system of integrated agricultural censuses and surveys, Volume 1. World Programme for the Census of Agriculture 2010. FAO Statistical Development Series 11. FAO- Rome 2005.

- a) Identification and location of agricultural holdings;
- b) Identification and legal status of agricultural holders;
- c) Population and employment in agricultural holdings; Land on holdings;
- d) Total land, land tenure and land use;
- e) Number of trees by type of permanent/medium term crop;
- f) Area under compact plantation of banana, plantain and coconut;
- g) Number of holdings growing temporary crops by type of crop;
- h) Type of forests in holdings and production of non-timber forest products;
- i) Number of livestock by type;
- j) Type of machinery and equipment;
- k) Selected agricultural practices and facilities;
- l) Farm organizations membership;
- m) Proportion of household income coming from agriculture;
- n) Sex and age of persons responsible for the different farming activities;
- o) Whether or not other economic activities are carried out by members of the holder's household and their type;
- p) Whether or not remittances are received in the holder's household.

## 1.6 Coverage

The 2007 St Lucia Census of Agriculture covered all the island territory excluding the Government Forest Reserves (17000 acres) and all agricultural activities.

For practical reasons and according to the criteria followed in previous censuses as well as in other Caribbean countries a low minimum size limit was adopted for holdings to be included in the census. However all households were visited and a screening form was filled for every household. Those that fulfill the minimum size limit were enumerated by means of a censal questionnaire. Table A2 of this report contains the information about the agricultural activities of those households not attaining any of the minimal cut-off limits.

The minimum size limits adopted for this census are:

- ✓ One/eight of an acre of any temporary crop.
- ✓ 10 bearing trees of any tree crop.
- ✓ 100 mats of banana and/or plantain.
- ✓ One head of cattle.
- ✓ 2 pigs or 2 goats or 2 sheep or one head of any two.
- ✓ 12 poultry or 12 rabbit or 12 head of poultry and rabbits together.

Those limits are the same of the 1996 census and similar to those adopted in the census previous to 1996. Therefore, they allow for comparisons between the present and previous agricultural censuses.

## **1.7 Time References**

The census reference year was the calendar year 2006, whilst specific items had the enumeration day as time reference: **Holding identification and location, identification and legal status of holder, holder's household composition, holding area, number of parcels, tenure, number of trees, area under compact plantation of banana, plantain and coconut, livestock, machinery and equipment owned, membership to farm organizations.**

Questions about average hours worked per day by household members referred to the previous six months. All other questions referred to the census reference year.

## **1.8 Enumeration Period**

The field work was performed during the period January 22<sup>nd</sup> 2007 to March 15<sup>th</sup> 2007.

## **1.9 Type of Enumeration**

The 2007 St Lucia Census of Agriculture was a complete enumeration exercise. All households in the island were visited. For every household a line of the screening form was filled. The screening form was designed to identify agricultural holdings to be enumerated. Once an agricultural holding above the cut-off limits was identified, an Agricultural Censal Questionnaire was filled. For purposes of enumeration the twelve Administrative Districts of the country were subdivided into 421 enumeration districts (ED). Every enumerator was charged with the enumeration of one or more Enumeration Districts.

## **1.10 Census Frames**

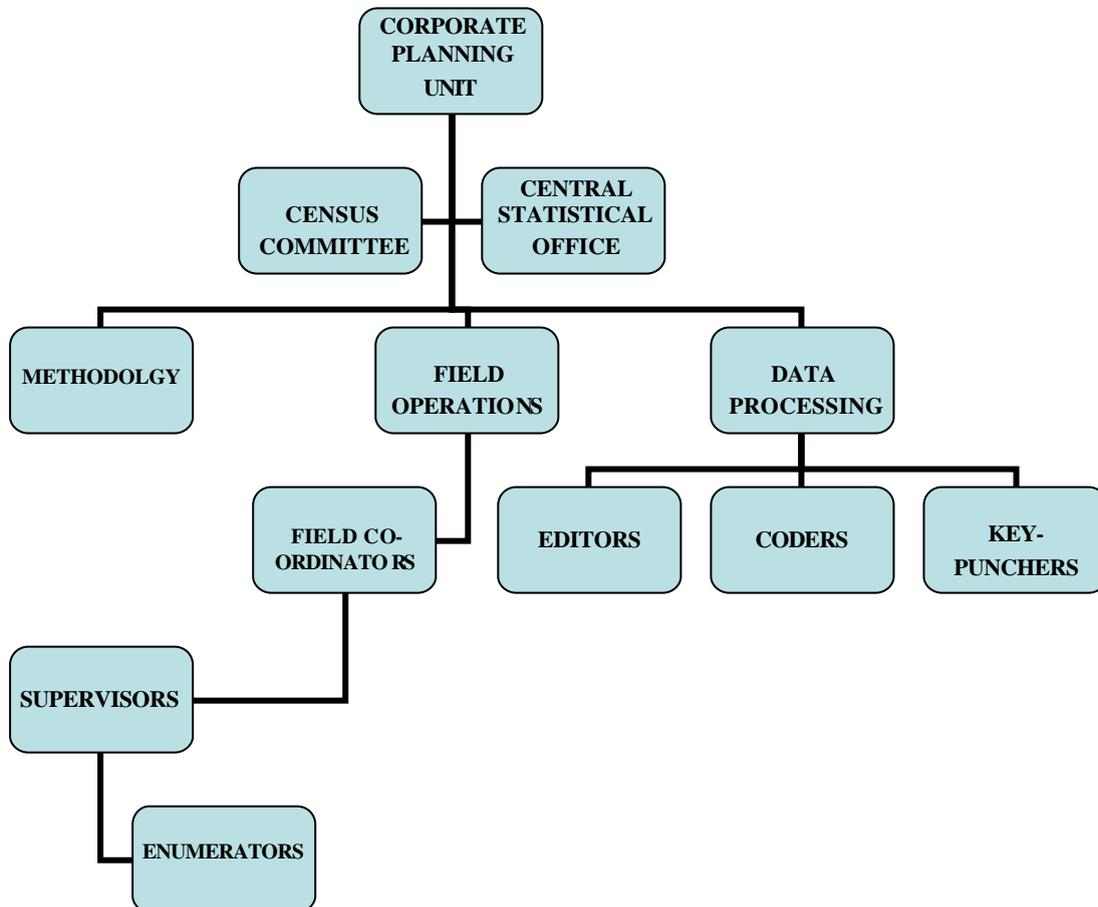

Data from the 2001 Population and Housing Census along with records from other sources (agriculture extension officers, farmer associations, etc.) served as censal frames. A list of farms of more than 25 acres, a list of farms with greenhouses, a list of poultry farms were compiled prior to the taking of the census to ensure complete coverage.

## **1.11 Cartography**

The cartography of the Agricultural Census was the same used for the 2001 Population and Housing Census. The same Enumeration Districts were also used. This procedure allows for comparisons and geographical links between the two censuses.

### 1.12 Organization of the Census

The 2007 Census of Agriculture was organized on a hierarchical basis according to the following organization chart:

As far as the field work is concerned a total of 186 enumerators canvassed the country collecting information. They were supervised by 36 supervisors. Three field coordinators were appointed one for the northern part of the country, one for the central part and the other for the southern part of the island.

The data processing was done at the Corporate Planning Unit (CPU). Two (2) technicians of the Statistical Unit and 1 data supervisor were responsible for coordinating the work of 20 editors, coders and keypunchers.

### 1.13 Preparatory Work

Preparatory work for the 2007 Census of Agriculture started as early as January 2006 with the appointment of the National Census Advisory Committee. The definition of the census

methodology, a first draft of the censal questionnaire, tabulation plan and training manuals were prepared during the months of August to September 2006. During the week 14<sup>th</sup> to 18<sup>th</sup> August 2006, the first version of questionnaires was pre-tested. Ten questionnaires were delivered to extension officers to test mainly for its wording and suitability as a data collection tool. The user/producer workshop held on August 22<sup>nd</sup> 2006, was another medium used for accessing the suitability of the questionnaire, apart from the review of the Tabulation Plan.

The pilot census was conducted during the week of September 11<sup>th</sup> to 17<sup>th</sup> 2006. Adjustments to the Censal Questionnaire, data processing forms, tables and manuals were done immediately following the exercise.

Recruitment of field personnel and the preparation of censal materials and supplies were undertaken in the month of December 2006. Training of field coordinators, supervisors and enumerators were carried out during the period January 10<sup>th</sup> to 18<sup>th</sup> 2007.

A publicity plan was approved by the National Census Advisory Committee and the publicity campaign was undertaken from December 2007 up to the end of the field work, in March 2007. This campaign comprised press releases by means of the newspaper, radio and TV, banners, involvement of schools and of religious organizations and personal contact with farmers by extension officers of the Ministry of Agriculture, Forestry and Fisheries.

#### **1.14 Post Enumeration Activities**

During and after the enumeration phase several activities to ensure the quality of the censal data and the correct processing of information were carried out. About 10 holdings per Enumeration District were revisited by supervisors in order to check for the quality of data recorded by the enumerators. After the Enumeration District was completed and the field checks performed by supervisors, the manual editors/coders, edited and coded all questionnaires. When necessary, questionnaires were sent back to the field in order to verify and correct inaccurate recorded information.

Once all questionnaires in a batch were ready, they were entered in the database. The data entry program also allowed for another level of data verification. A validation program to detect inconsistencies was also run. Only after all databases were “cleaned” the final tables were produced. Preliminary tables were checked internally and with external data sources to guarantee the accuracy of the final censal data. Finally censal coverage and others quality checks were performed (see **Chapter 5**).

## 2. MAIN CONCEPTS AND DEFINITIONS

### 2.1 Holding or farm

An agricultural holding (or farm) is an **economic unit** of agricultural production under single management comprising all livestock kept and land used wholly or partly for agricultural production purposes, without regard to title, legal form or size.

Single management may be exercised by an individual or household, jointly by two or more individuals or households or by a juridical person such as a corporation, cooperative or government agency. The holding's land may consist of one or more parcels, located in one or more separate areas or in one or more Administrative Districts, providing the parcels share the same production means utilized by the holding, such as labor, farm buildings, machinery or draught animals. (The requirement of sharing the same production means should be fulfilled to a degree to justify the consideration of various parcels as components of one economic unit.)

Typically there are two types of agricultural holdings:

1. Holdings in the household sector: those operated by household members.
2. Holdings in the non-household sector: those operated by corporations, government institutions, church institutions, etc.

Economic units engaged solely in forestry and logging or agricultural services are not considered agricultural holdings because these economic activities are outside agriculture.

It is important to note that **the holding does not include lands which are rented out to other persons, but includes lands renting from others.**

### 2.1 Agricultural Holder

He/she is a civil person or a juridical person who exercises management control over the agricultural holding operations and who takes major decisions regarding resource use. The holder has technical and economic responsibility for the holding and may undertake all responsibilities directly, or delegate responsibilities related to day-to-day work management to a hired manager.

Every holding has a holder.

In most of the cases the holder is a person.

When two or more persons jointly operating a holding belong to the same household, if there is one person making the major decisions, he/she should be defined as the holder. If more than one person of the same household is involved in major decision-making is a joint holder. In the case of the 2007 St Lucia CAF they are included in the same category of holder: Individual/ Household.

It may happen that different persons belonging to the same household operate different(s) piece(s) of land and the production obtained is not shared for all members of the household, in this case, there is more than one holder in the same household and each piece of land becomes a farm. A different case is when they share the produce, for example, the man is the holder and his wife manages poultry and goats; in that case it must be taken as only one holding.

When two or more persons belonging to different households operate the same holding, each one will be considered as joint holder in the same questionnaire. This is the case of partnerships. In this case, the information about the holder's household will be collected for each household of the joint holders.

When a person, who has two or more households, is operating land for agricultural purposes in the different households with the same production means it will be considered as one farm and one holder.

A holder can operate land which is owned and/or rented from others and/or on a squatter basis and/or under any other form of land tenure. Besides, a holder can operate land without any rights to agricultural use of the land.

## **2.2 Household**

A private household consists of one or more persons living together (i.e. sleeping most nights of a week) and sharing at least one daily meal. It is usually formed by a family group but it may consist of two or more families or a group of unrelated persons or a person living alone.

A household usually occupy the whole, part of, or more than one housing unit.

All persons belonging to one household are taken in the census as household members. Members of the holder's household also include the holder himself.

## **2.3 Parcel**

A holding parcel is any piece of land of one tenure type, entirely surrounded by other land, water, road, forest, etc. not forming part of this holding or forming part of it under a different form of tenure.

A parcel may consist of one or more fields adjacent to each other. A field is a piece of land in a parcel separated from the rest of the parcel by easily recognizable demarcation lines, such as paths, and/or hedges. A field may consist of different plots. A plot is a part or whole of a field on which a specific crop or crop mixture is cultivated.

## 2.4 Land tenure

Land tenure refers to the arrangements or rights under which the holder operates the land making up the holding. The following definitions on **land tenure** were adopted:

- **Owned:** it is the area held with a title of ownership.
- **Family land:** it is a form of ownerlike possession which comprises the land held by heredity tenure under conditions that enable the holder to operate it as if he/she were the owner although he/she has not a legal title of ownership.
- **Rented or leased:** it is the land which is rented by the holder from other persons, usually for a limited period of time. The rental agreement may take different forms: land rented by a fixed amount of money; land rented by a fixed amount of produce or land rented by sharing of produce (**For example:** at the end of the season, the owner of the land is paid with one fourth of the produce obtained from that land).
- **Squatting :** it is the land for which the holder lacks title of ownership and for which he/she does not pay rent even though he/she retains its total usufruct. This land is occupied without the consent of the owner, even though it is sometimes tolerated.
- **Other:** it comprises any other form of tenure not considered in the previous categories.

## 2.5 Land use

Land use refers to activities – such as growing crops, raising livestock or cultivating fish – carried out on the land making up the holding with the intention of obtaining products and/or benefits. The following definitions of **land use** are adopted:

- **Land under permanent or medium term crops :** it is the land that during the reference year was mainly planted with crops which occupy it for a long period of time and which do not have to be planted after each harvest. It includes all tree crops (bearing or not) banana, plantains, etc. In case of permanent crops inter-planted with temporary crops that land was reported here.

- **Land under temporary crops only:** it is the land used exclusively (during 2006) for crops with a growing cycle of under one year, which needs to be newly sown or planted for further production after the harvest. It also includes some crops which remain in the field for more than one year and their harvest destroys the plant like cassava. Dasheen and pineapples are also considered as temporary crops.
- **Land under permanent meadows and pastures:** it is the land used permanently (for five years or more) to grow herbaceous forage crops, through cultivation or naturally (wild prairie or grazing land). Sometimes, livestock feed on natural pastures on which trees and shrubs are grown; in this case the land will be reported here only if the growing of forage is the most important use of the land. In case livestock is grazing under permanent crops (like coconut), that land should not be reported here but in permanent or medium term crops.
- **Land under temporary meadows:** it is the land temporarily cultivated with herbaceous forage crops for mowing or pasture. A period of five years is used to differentiate between temporary and permanent meadows.
- **Resting (fallow) land:** this is the land at prolonged rest before re-cultivation. The land is classified here if it has been (or is expected to be) kept at rest for at least one agricultural year and less than five years. Otherwise the land must be classified according at its main use: land under temporary crops, pastures, woodland or other land.
- **Forest and woodland:** it includes woodlots or timber tracts, natural or planted, constituting part of the holding which have or will have value as wood, timber, non timber forest products or for protection, forest trees nursery must be included here as well as rows, belts, small clumps of trees, bamboos and other woody vegetation. Woodland and forest used only for recreational purposes should be excluded and reported under "all other lands".
- **All other lands:** it is the land not classified in the previous types and it includes: land with farm buildings, parks, ornamental gardens, land used for aquaculture, lanes and roads, open spaces needed for storing equipment and products, wasteland, land cover with rocks, sand or water.

## 1. MAIN CENSAL RESULTS AND THEIR COMPARISONS WITH PREVIOUS CENSUSES.

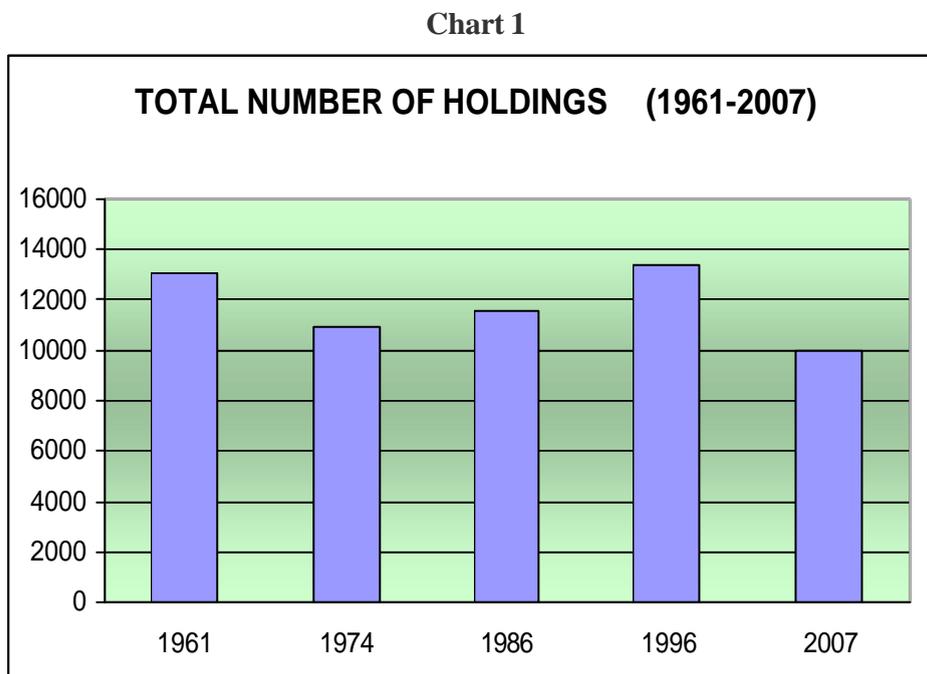

### 3.1 Evolution of Agriculture in St Lucia

St Lucia undertook Agricultural Censuses in 1946, 1961, 1973/74, 1986, 1996 and 2007. This long tradition in measuring the sector allows for several intercensal comparisons to track the evolution of the agricultural sector in the country.

The most significant finding of the 2007 Census of Agriculture is the decline in number and area of agricultural holdings. Such an occurrence is reflective of the net transfer of resources from agriculture and the impact of trade liberalization. The dismantling of preferential trading arrangements has resulted in the sharp decline in banana production and significant reductions in agricultural export earnings.

### 3.2 Number of holdings

Chart 1 depicts the changes in the total number of agricultural holdings since 1961 compared with the last four agricultural censuses:

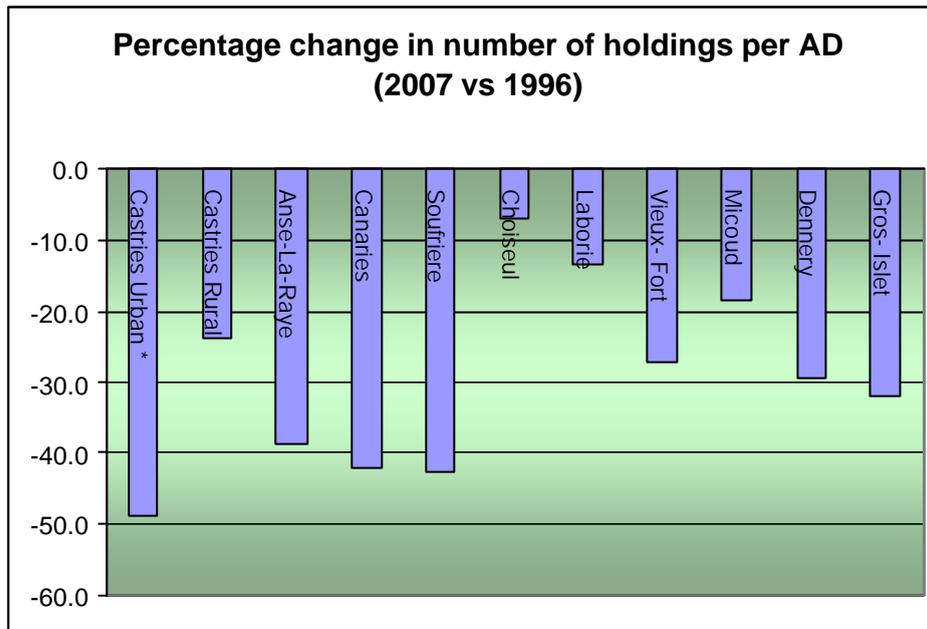

It is noted that the number of holdings in 2007 are the lowest of the 46-year period analyzed. While all Administrative Districts have experienced a reduction in number of

holdings since the last agricultural census (1996), they contribute in a quite different manner to this decrease.

**Chart 2** shows the percentage change in number of holdings since the last census by Administrative District.

**Chart 2**

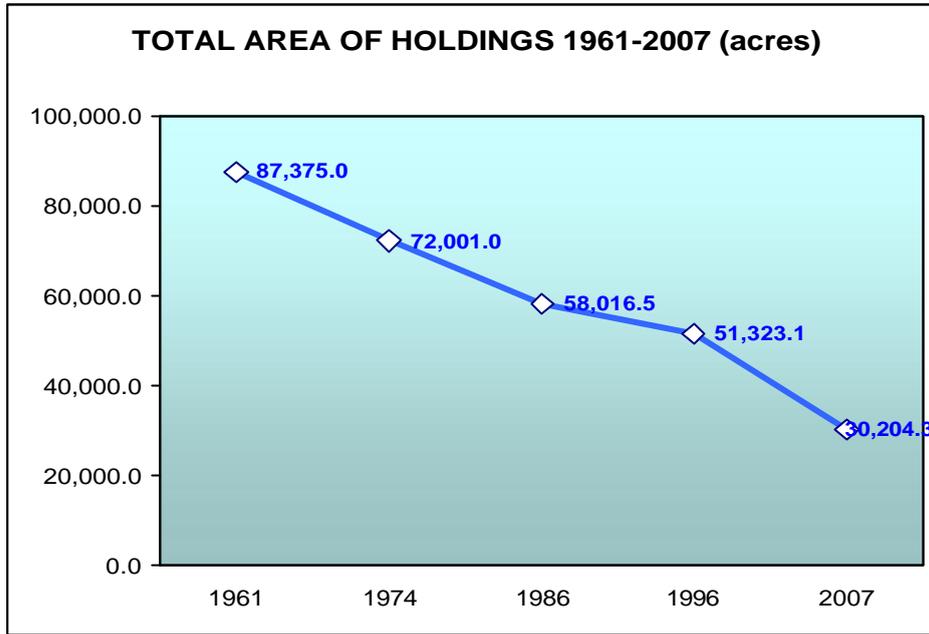

\* Includes the metropolitan area

From the above chart it is noted that the greatest decrease in the number of holdings (-48.8%) occurred in the urban part of Castries followed by Soufriere (-42.6%) and Canaries (-42.1%). Choiseul experienced the least decrease in number of agricultural holdings: -7%.

### 3.3 Land area in agriculture

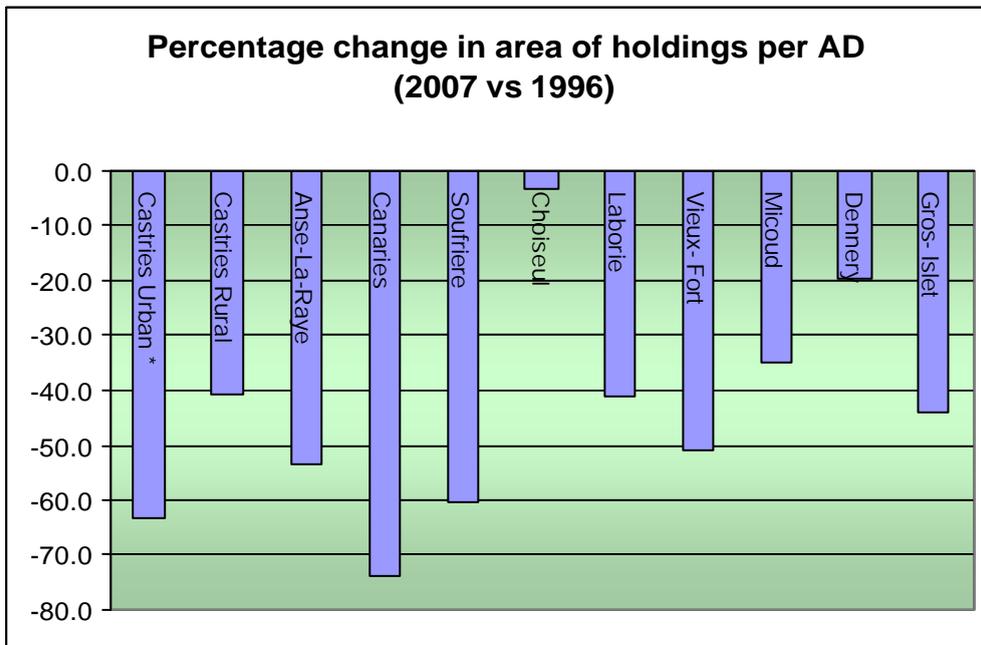

Looking at the total area in agricultural holdings, the 51,328 acres recorded in the 1996 Agricultural Census dropped to 30,204 acres in 2007. This represents a decrease of 41.1% following the trend observed since 1961 as shown in **Chart 3**:

Chart 3

With respect to the change observed at the level of each Administrative District during the 1996-2007 intercensal period, Canaries lost almost three-fourth of its 1996 agricultural area, followed by Castries Urban (-63.4) and Soufriere (-60.6) as shown in Chart 4.

Chart 4

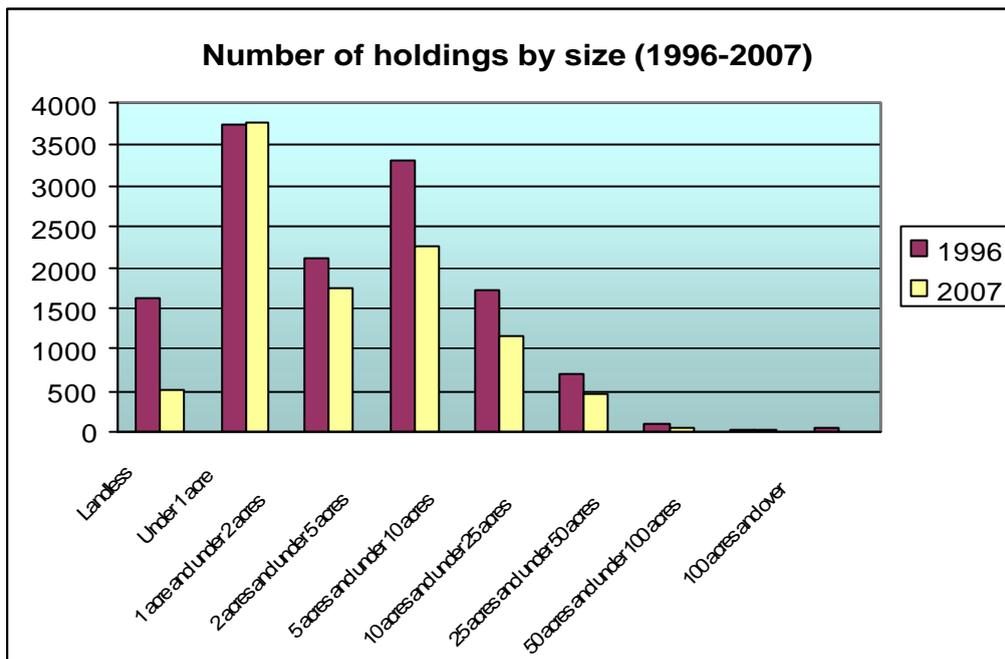

\* Includes the metropolitan area

### 3.4 Changes in land concentration

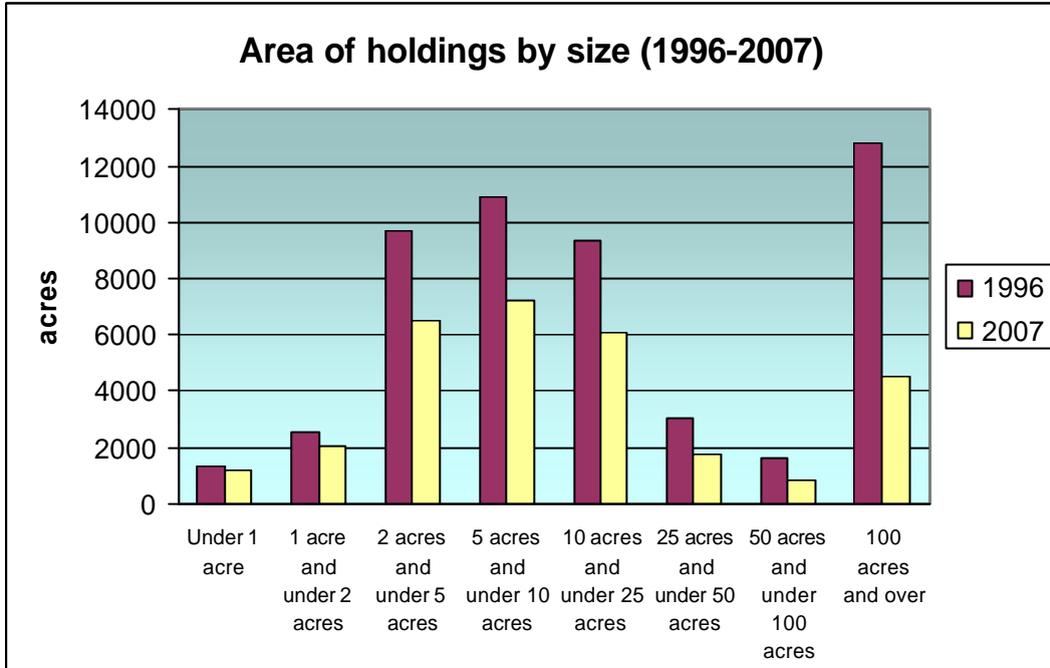

The greatest loss in number of holdings and area since the last census was observed in largest farms; more than 70% of the farms operating more than 100 acres in 1996 disappeared in 2007. On the other hand, a small increase in the number of farms (with land) under 1 acre is observed (+0.5%). See **Chart 5**.

Chart 5

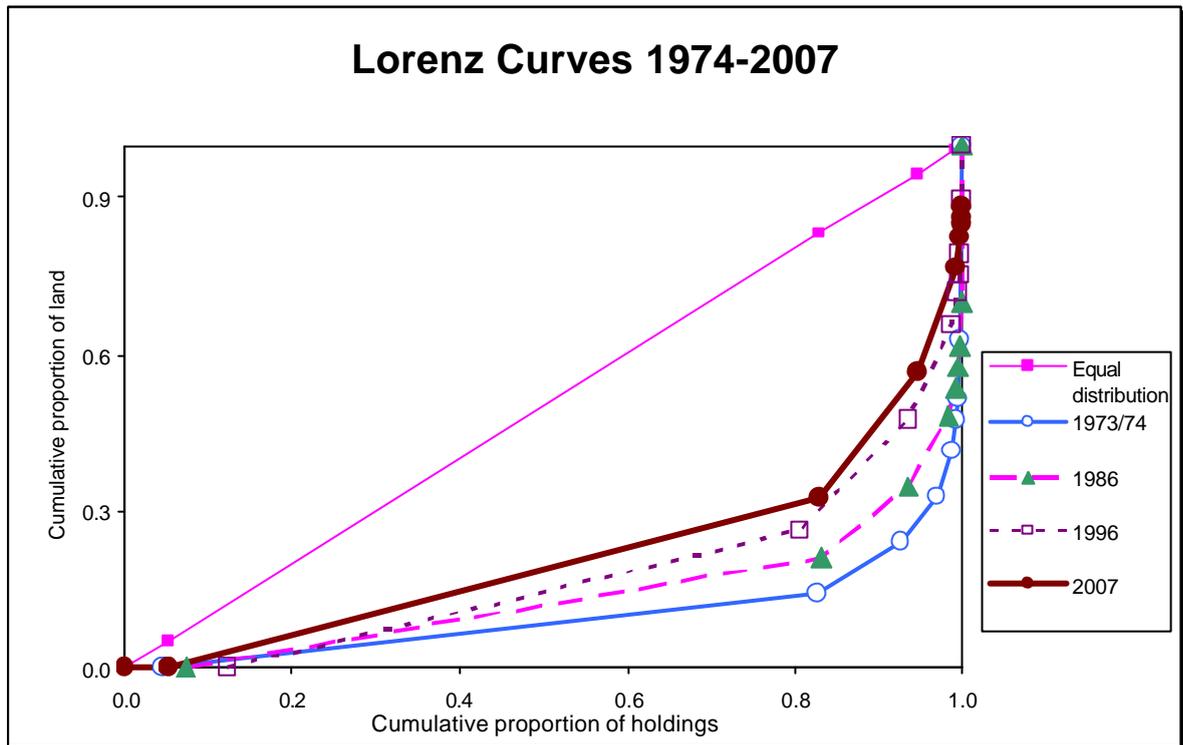

Looking at the area in holdings, all the size categories experienced losses and again, the greater the size category, the greater the loss of agricultural area as seen in **Chart 6**.

Chart 6

The **Lorenz** curves for the last four censuses show a trend towards a better distribution of land. In fact, while in 1974, 82% of holdings (those with less than 5 acres) held 14% of the total land and 0.2% of the larger holdings operated 37.3% of the land; in 2007, the same 82% of smaller holdings accumulate 33% of the land and 0.25% of the larger holdings held 18% of the total area. **Chart 7** shows this evolution in land concentration through the **Lorenz** curves.

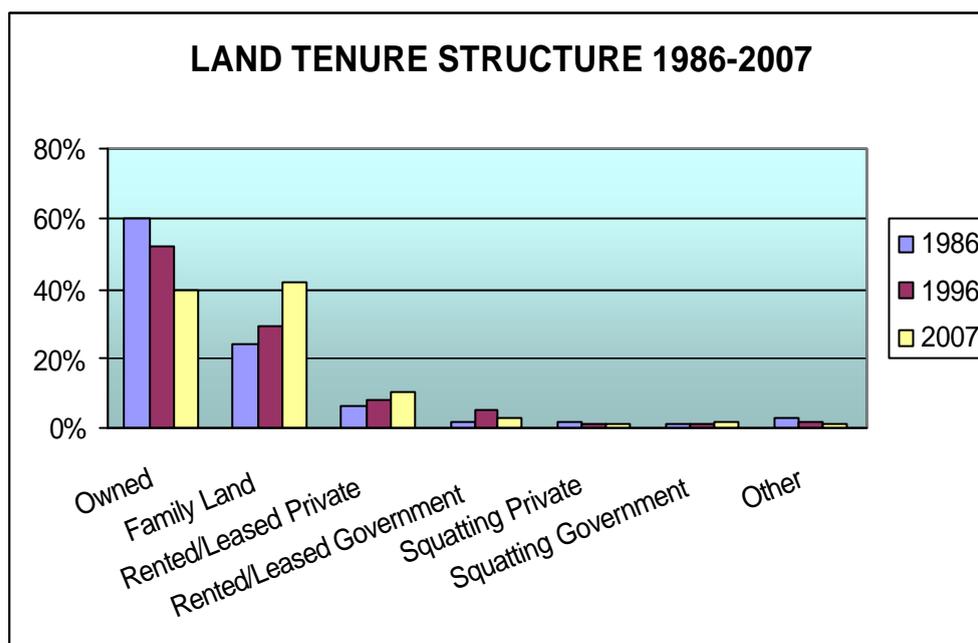

Chart 7

### 3.5 Land tenure.

As evident from **Chart 8**, the share of owned land in total holding land has been decreasing during the last 20 years (from 60% to 40%). At the same time, family land increased (from 24% in 1986 to 42% in 2007).

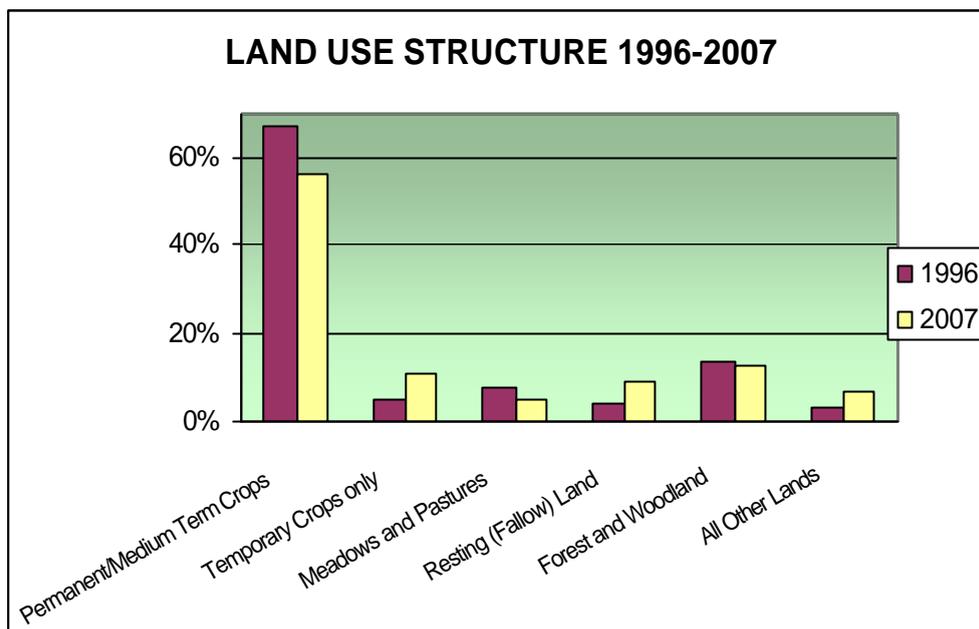

Chart 8

### 3.6 Land use

Changes in the use of the land in St Lucia during the last decade are clearly shown by analyzing the structure of the different uses of land investigated through the census. The apparent abandonment of banana plots has contributed to the decrease in land used for permanent/medium term crops in total land on holdings, from 67.1% to 56.3%. At the same time, land use for temporary crops increase from 4.9% to 10.8% in the last 10 years. (See **Chart 9**). For a correct interpretation of **Chart 9** it must be taken into consideration that “Resting (fallow) land” is the land that has been (or is expected to be) kept at rest for at least one agricultural year and less than five years. So, abandoned land was included either here or in “All other land” (in case that it is expected to be at rest for more than five years).

Chart 9

The FAO World Programme for the Census of Agriculture 2010 suggests the following classification of the different uses of land:

- **Agricultural land**

- ❖ **Cropland**

- **Arable land**

- Land under temporary crops
      - Land under temporary meadows
      - Land temporary fallow

- **Land under permanent crops**

- ❖ **Permanent meadows and pastures**

- **Forest and woodland**

- **Other land**

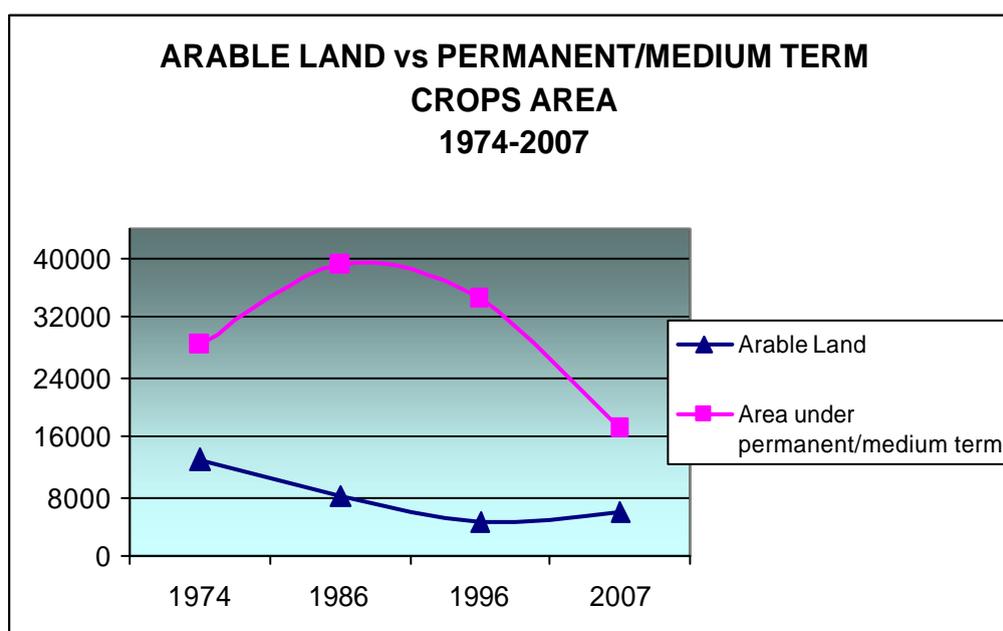

In order to compare the area under the different uses in the last four censuses it is necessary to re-classify the uses of the land according to the new classification. This is presented in the following table:

**Table 1**

CLASSES OF LAND USE (Reclassified)	CENSUS YEAR			
	1974	1986	1996	2007
<b>Total</b>	<b>72,001</b>	<b>58,925</b>	<b>51,328</b>	<b>30,204</b>
<b>1. Agricultural land</b>	<b>49,028</b>	<b>48,849</b>	<b>42,880</b>	<b>24,530</b>
1.1. Cropland and permanent meadows and pastures	20,492	9,680	8,447	7,525
1.2. Permanent/medium term crops	28,536	39,169	34,433	17,005
<b>2. Forest and woodland</b>	<b>19,002</b>	<b>8,322</b>	<b>6,810</b>	<b>3,713</b>
<b>3. Other land</b>	<b>3,971</b>	<b>1,754</b>	<b>1,638</b>	<b>1,961</b>

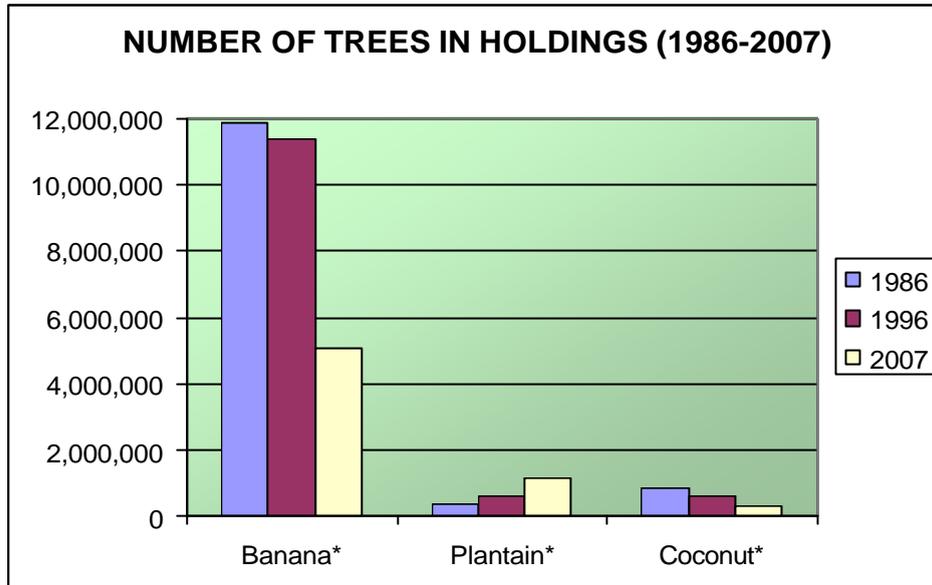

It is interesting to note a shift to the cultivation of temporary crops in recent times. Arable land which means, land dedicated to temporary crops (inclusive of fallow land) was 13,146 acres in 1974 representing 18.3% of the total area, 8,156 acres in 1986 (13.8% of the area), 4,570 acres in 1996 (8.9% of the total area) and 6,017 acres in 2007 accounting for 20% of the total area. At the same time, area with permanent/medium term crops dropped from 39,169 acres in 1986 (66.4% of total area) to 17,004 acres in 2007 (56% of total holding area, as indicated in **Chart 10**.

**Chart 10**

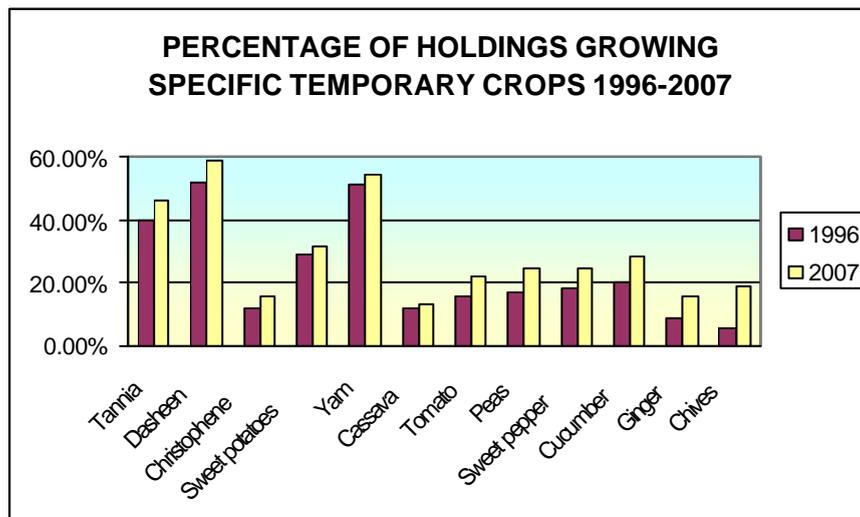

It is highly illustrative to see the evolution of the main permanent/ medium term crops as shown in **Chart 11**. The significant decrease in the number of banana trees is contrast by an increase of plantain trees over the twenty-year period.

**Chart 11**

For temporary crops, the census only investigated the number of holdings growing them. An increase in the number of holdings growing specific temporary crops (tomato, sweet pepper, peas, etc.) and in the percentage of holdings growing all the main temporary crops appearing in the census was observed during the last intercensal period as shown in **Chart 12**.

**Chart 12**

### 3.7 Livestock

As seen before, lands under meadows and pastures have decreased their share of the total use of land (from 7.5 to 5 % between 1996 and 2007). This is comparable with the decrease observed in the number of grazing livestock kept. In fact all species with the exception of pigs and poultry has decreased their total stock number since 1996 as shown in **Chart 13**.

On the other hand, the decrease in number of animals was proportionally less than the decrease in number of holdings with each animal species. Therefore, the number of heads per holding with each type of animal increased in all categories. See **Chart 14**.

Chart 13

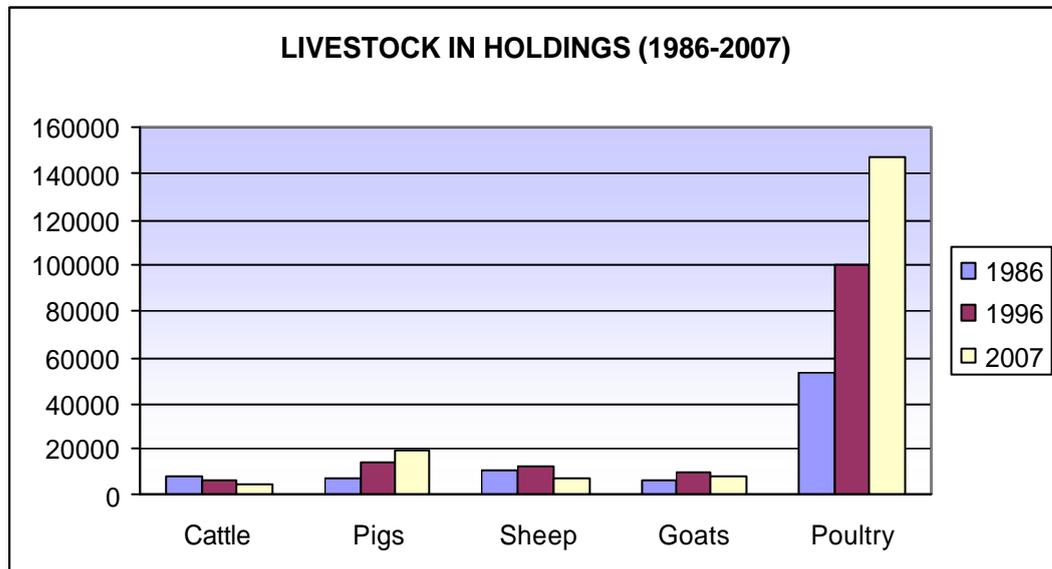

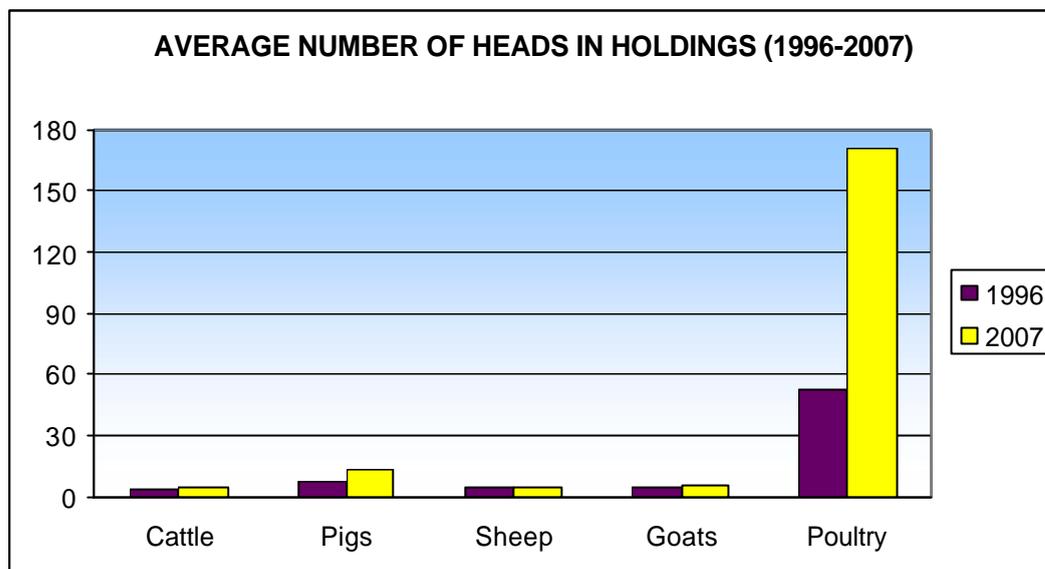

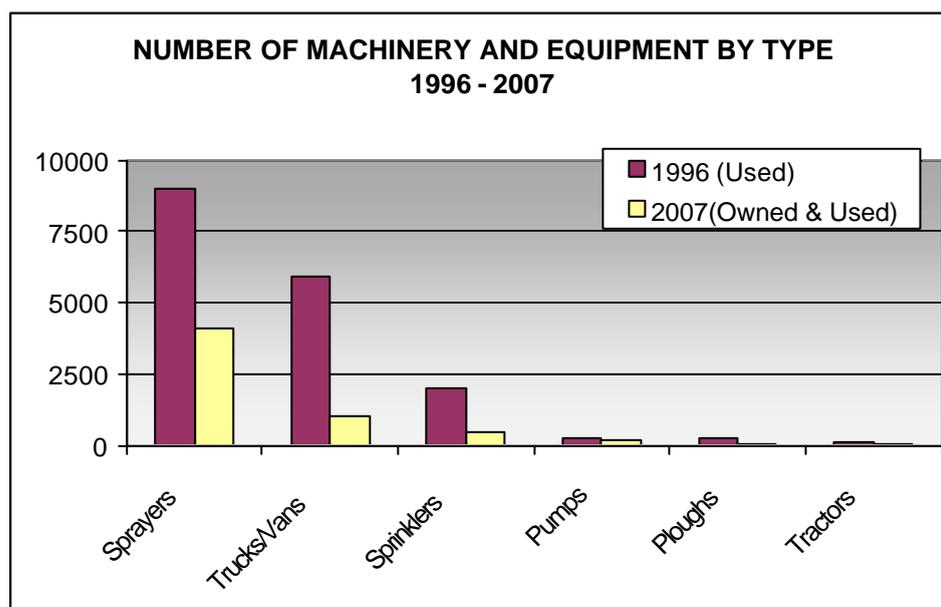

Chart 14

### 3.8 Machinery and equipment

The sharp decline in banana production also produced a severe change in type of machinery and equipment used on holdings. It must be taken into consideration that in the 1996 census the machinery and equipment “used” on holding was reported; however, 2007, the number refers to the machinery and equipment “owned and used” on holding. Since the renting of machinery is not a usual practice in St Lucia, figures from both censuses are roughly comparable, as indicated in **Chart 15**.

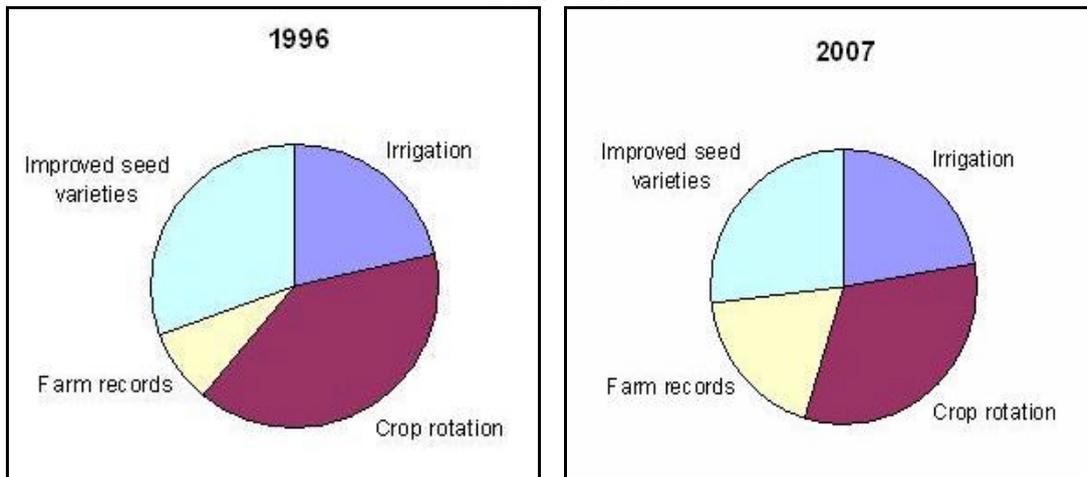

Chart 15

### 3.9 Selected agricultural practices

**Chart 16** shows the percentage of holdings using selected practices investigated in the last two agricultural censuses. It is clear the proportion of holdings using farm records in the country, increased from 4.9 in 1996 to 12 % in 2007. On the other hand, crop rotation decreased its participation in the total from 22.7 % to 21.1 % in the period.

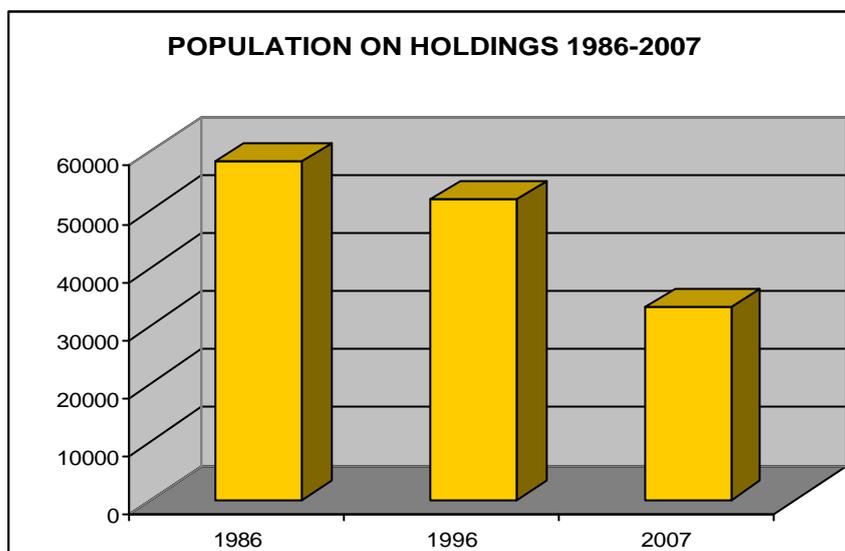

**Chart 16**  
**PERCENTAGE OF HOLDINGS USING SELECTED PRACTICES**  
**1996 - 2007**

### 3.10 Population and employment

The total holding household population has been decreasing since 1986 as can be seen in Chart 17. The decrease was both in absolute and relative terms. In fact, in 1986 population living on holdings (58,000) represented approximately 47% of the total population. In 1996 that percentage went to 37% of the national population. Finally in 2007 the 32,919 members of holding households represent about 21% of the national population. The global trend to increasing urbanization is not strange to St Lucia.

Chart 17

Interesting structural changes in employment in agriculture have occurred in the last twenty years. In fact, the characteristics of permanent workers non-household members show several changes over the period 1986-2007.

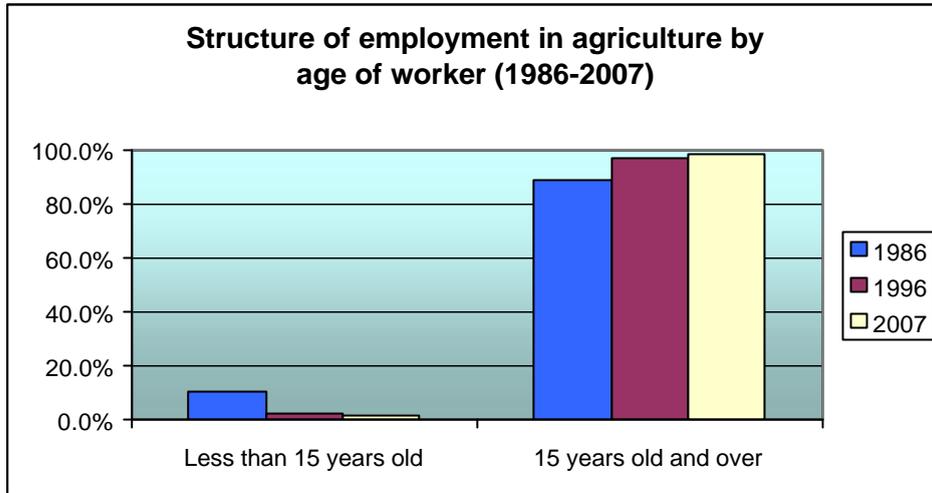

A decrease in the proportion of unpaid permanent workers (mainly female workers) along with an important decrease in the proportion of child and young workers (less than 15 years old) and female workers is observed.

The following charts depict the evolution of structures of permanent workers non-household members, by sex (Chart 18), by age (Chart 19), and by type (Chart 20) during the period 1986 to 2007.

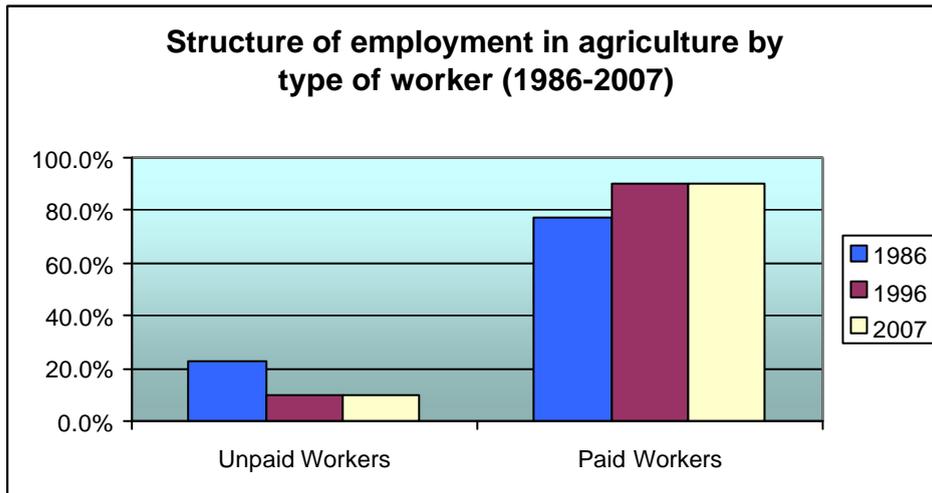

Chart 18

**Chart 19**

**Chart 20**

The following, **Chart 21** and **Chart 22** illustrates the structure of employment in agriculture by type of male and female workers respectively, during the period 1986 – 2007.

**Chart 21**

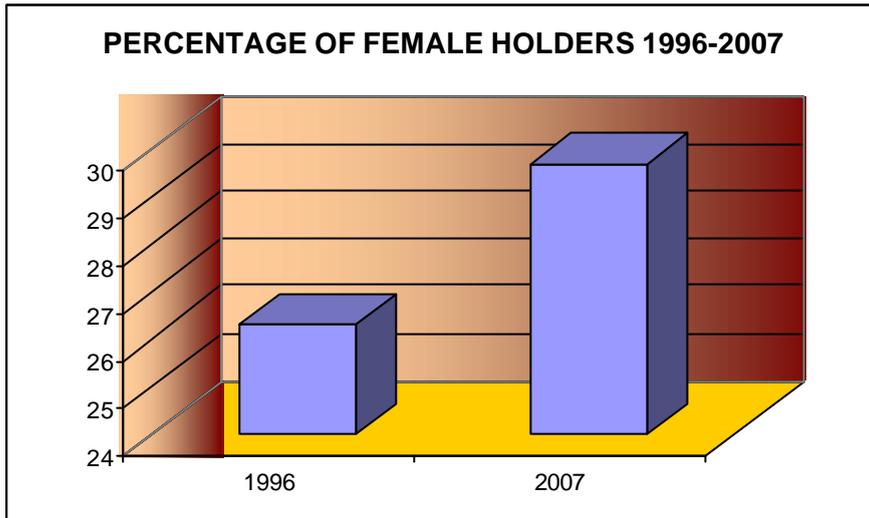

**Chart 22**

### 3.11 Main holders' characteristics

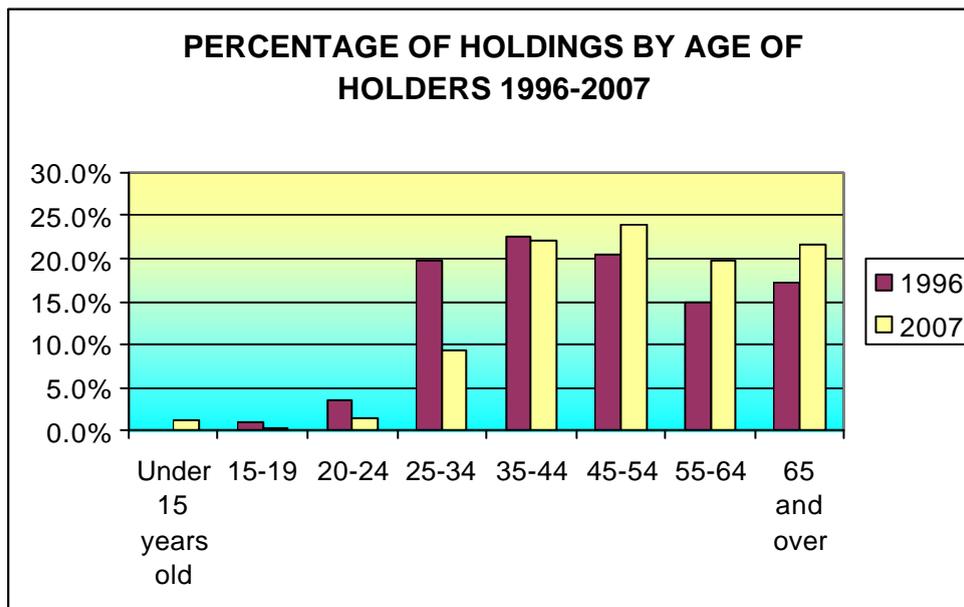

Looking at the structure of holders by sex, age and source of income, it is apparent that there is an increasing number of women operating agricultural holdings (both in number of holdings and area). See **Chart 23**.

Chart 23

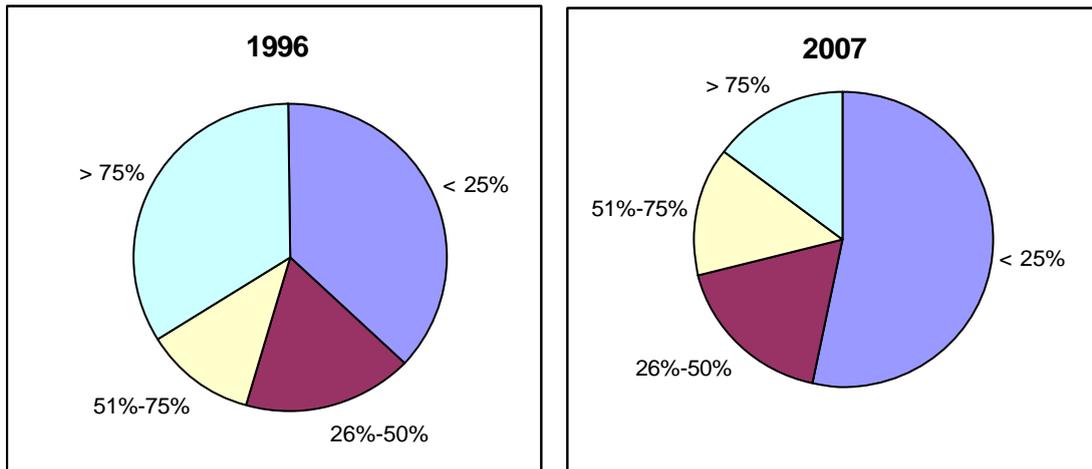

Upon comparison of holders' age, an ageing of holders becomes evident as seen in **Chart 24**.

Chart 24

Finally, their dependence of income coming from agriculture has diminished since the last census. See **Chart 25**.

**Chart 25**  
**HOLDINGS BY PERCENTAGE OF INCOME FROM AGRICULTURE**  
**1996 - 2007**

# STATISTICAL TABLES

## 5. QUALITY CHECKS

Quality checks refer to all the procedures and operations conducted to the aim of reducing different type of errors to a minimum. Generally speaking, two types of errors are usually recognized in a census: a) Coverage errors and b) Response errors. The former refers to under or over coverage, while the latter one alludes to erroneous information or non response.

Field checks during the field operations, post enumeration surveys and comparisons of censal data with external data are the methods most often used to conduct quality check of the censal data.

In the case of the 2007 St Lucia Census of Agriculture a Post Enumeration Survey was designed but was not conducted because of lack of funds.

During the field work, two main field checks were performed:

1. Supervisors reviewed the filled questionnaires immediately after the enumeration following precise written instructions;
2. Supervisors re-interviewed at random about 10 holdings per ED and enumerators submitting work of a poor quality were re-trained or substituted.

After taking the census, coverage errors were checked by comparing the number of households visited per Enumeration District against the number of household from the 2001 Population and Housing Census. In the case of unexplained large differences, additional field checks were conducted.

Finally, several components of the final census data were checked against external information to ascertain that the data is tenable.

### 5.1 Checking coverage

During the data collection phase of the census work 41,257 households were screened through the use of a "Screening Form". Two questions were asked: 1. Is this number the one expected? And 2. Does this figure hide coverage problems?.

A first precision is necessary. The censal enumerator actually screened dwellings units instead of households. The common situation is to have one household per dwelling unit. When it was not the case, one line of the screening form was filled per dwelling unit ("Does somebody here operate...?", or "Does somebody in this house operate..."). So the comparison of houses screened should be done against the number of dwelling units.

A second point is that in the 2001 Population and Housing Census, several dwelling units were not inhabited. In order to have a better approximation of the number of dwelling

units reported from the screening forms the projections should be done on the number of inhabited units.

To check for coverage the following methodology was applied.

1. Taking the intercensal annual rate of population growth, the 2001 enumerated population was project to 2006 by Administrative District.
2. Using the number of persons per household from the population census at AD level, the number of households in 2006 was estimated
3. The rate of the “number of households per inhabited dwelling” was used to estimate the number of inhabited dwelling units in 2006 at AD level
4. The total number of dwellings screened in the Agricultural Census was compared with the projected number of inhabited dwellings.
5. The Coverage Rate was calculated by using the proportion of the “number of dwellings screened over the projected number of inhabited dwellings.”

**Tables 1 and 2 and Figure 1** depict these results. It can be seen that the coverage of the agricultural census was very good (more than 92%). Some under coverage is apparent in administrative districts of Castries and Micoud. The population census projection cannot allow to discriminate between Urban and Rural Castries in the same way as the census of agriculture. It can be assumed that the under coverage was mainly in the metropolitan section of the reported Castries administrative district.

**Table 1**

<b>Administrative Districts</b>	<b>Number of Households in 2001</b>	<b>Number of Dwellings in 2001</b>	<b>Number of Vacant/ Closed/Empty Dwellings in 2001</b>	<b>Number of Inhabited Dwellings 2001</b>

## 5.2 Checking against external data.

In this section some comparisons with data from other sources is undertaken. The main objective is to check for the reasonableness of the observed censal trends.

### 5.2.1 Banana production

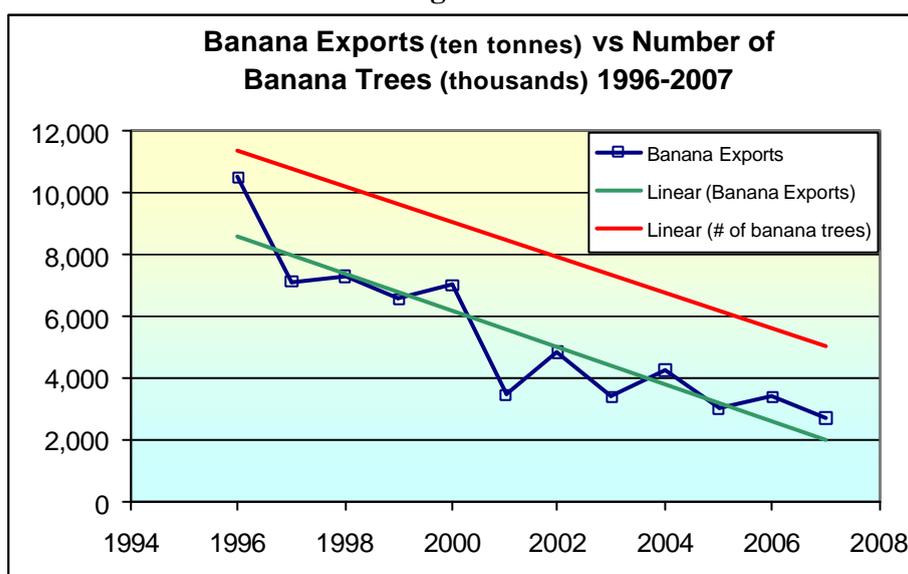

The Agricultural Census did not investigate production but reported the number of trees on holdings. St Lucia exports between 90% and 95% of the bananas that is produced. Banana export data is very reliable and so these figures can be used as a good “proxy” variable for production. On the other hand, the number of banana trees is, in the medium term, closely related to banana production. As a consequence the observed trend in number of trees should accompany the trend in banana exports. **Table 3** overleaf and **Figure 2** depicts this situation.

**Table 3**

<b>Banana exports vs Number of trees</b>		
<b>Year</b>	<b>Banana Exports (tonnes)</b>	<b>Number of banana trees</b>
1996	105,051	11,376,220
1997	71,400	
1998	73,040	
1999	65,230	
2000	70,280	
2001	34,210	
2002	48,160	
2003	33,970	
2004	42,320	
2005	30,000	
2006	33,982	
2007	26,934	

*Source: Annual Agricultural Statistical Digest & the 1996 and 2007 Agricultural Census Reports*

**Figure 2**

### 5.2.2 Cocoa Production.

The Ministry of Agriculture produces annual information on cocoa production based on the data provided by the sole exporter of the crop, the St Lucia Agriculturist Association (SLAA). This data refers to the purchases of cocoa beans by the SLAA which represents an estimated 90% of the island's cocoa production.

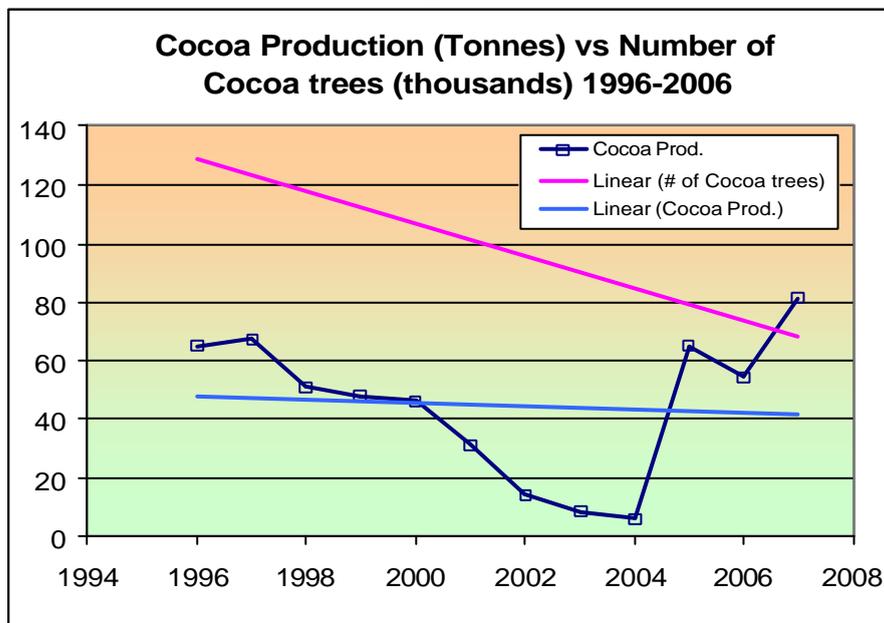

In the medium term the trend in cocoa production should accompany the trend on number of cocoa trees collected through the agricultural censuses. Upon this comparison, the parallelism between both trends becomes evident as shown in **Table 4** and **Figure 3**. This constitutes a new validation of the censal data.

**Table 4**

Cocoa Production vs Number of trees		
Year	Cocoa Product. (Tonnes)	# of Cocoa trees
1996	65	129,143
1997	67	
1998	51	
1999	48	
2000	46	
2001	31	
2002	14	
2003	8	
2004	6	
2005	65	
2006	65	
2007	81	67,739

*Source: Annual Agricultural Statistical Digest & Agricultural Censuses*

**Figure 3**

### 5.2.3 Coconut Production

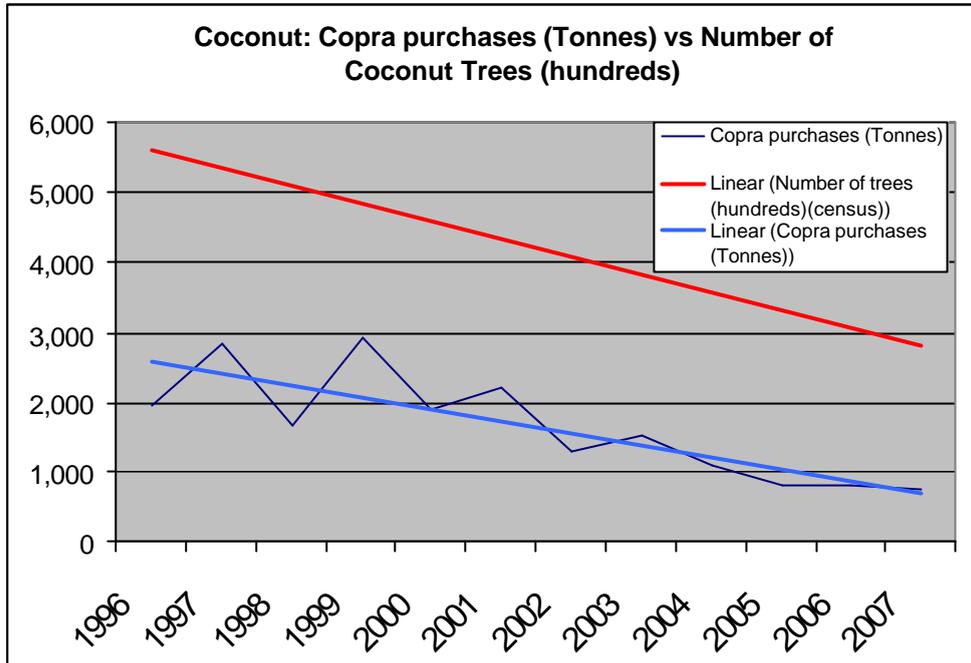

Copra is produced from an estimated 80% of the island's total production of coconut and is purchased in bulk solely by the Copra Manufacturers Association (CMA). The Ministry of Agriculture collects the information from the CMA to produce the production data on copra. This variable also serves as a "proxy" variable for coconut production which in the medium/long term is closely associated with the number of coconut trees. **Table 5** and **Figure 4** show the observed trends, thus validating the censal data collected.

**Table 5**

<b>Copra Purchases vs Number of Coconut Trees</b>			
<b>Year</b>	<b>Copra Purchases (Tonnes)</b>	<b>Number of Trees (census)</b>	
1996	1,946	560,880

Figure 4

#### 5.2.4 Other crops

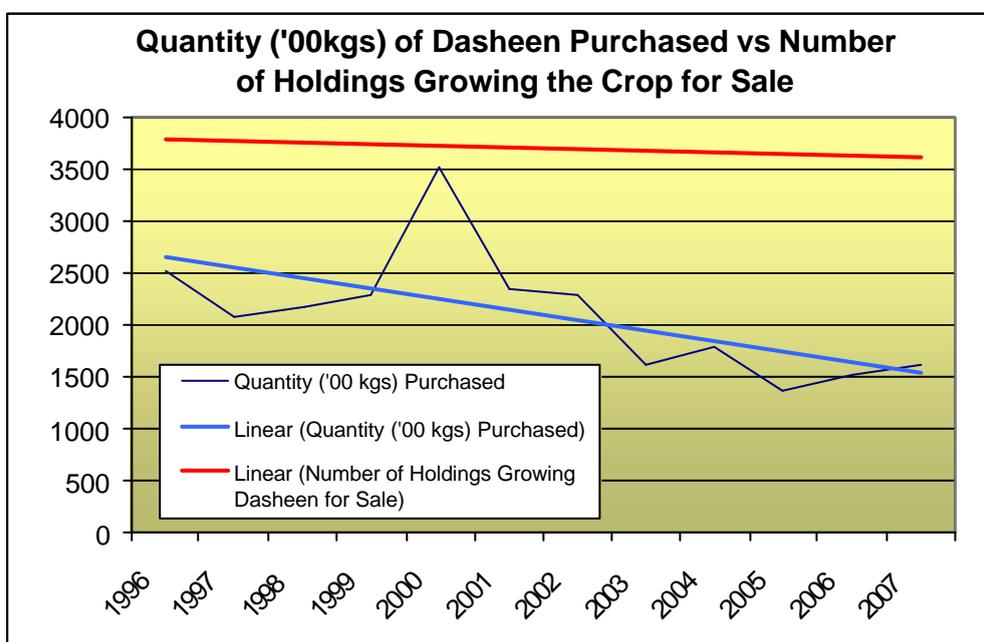

Estimates on the production of other crops are based on information obtained from the St Lucia Marketing Board (SLMB), leading supermarkets and from selected hotels on the island. The following tables (**Tables 6, 7 and 8**) and charts (**Figures 5, 6 and 7**) depicts the situation for three selected temporary crops by means of the comparison of the trends in purchases and the number of holdings growing those crops wholly or partly for sale as obtained from the agricultural censuses of 1996 and 2007.

**Table 6**

<b>Quantity of Dasheen Purchased vs Number of Holdings Growing the Crop for Sale</b>			
<b>Year</b>	<b>Quantity Purchased ('00 kgs)</b>	<b>Number of Holdings</b>
