DAN KEMUDAHAN ASAS
HOUSEHOLD INCOME AND BASIC AMENITIES SURVEY REPORT

2009

KATA PENGANTAR

Laporan Penyiasatan Pendapatan Isi Rumah dan Kemudahan Asas (PPIR/KA) 2009 merupakan julung kali diterbitkan oleh Jabatan Perangkaan Malaysia. Objektif utama laporan ini adalah untuk menerbitkan perangkaan berkaitan dengan taburan pendapatan isi rumah, maklumat kemudahan asas dan insiden kemiskinan di Malaysia. Dapatan daripada penyiasatan ini digunakan oleh pihak kerajaan dalam penggubalan rancangan pembangunan Malaysia. Penyelidik individu dan swasta juga menggunakan maklumat dalam laporan ini sebagai input kepada kajian mereka.

Nota teknikal berkaitan dengan objektif, skop dan liputan serta konsep dan definisi turut dimuatkan dalam laporan ini bagi memudahkan pemahaman pengguna mengenai penyiasatan ini. Maklumat pendapatan dalam penyiasatan ini dikumpul berdasarkan kepada garis panduan “**A Provisional Framework for Household Income, Consumption, Saving and Wealth**” (1995) yang diterbitkan oleh Australian Bureau of Statistics (ABS) dan juga garis panduan “**Final Report and Recommendations of the Expert Group on the Household Income Statistics**” (The Canberra Group 2001) dan **Report II - Household Income and Expenditure Statistics (International Labour Organization, 2003)**.

Saya ingin mengambil kesempatan ini merakamkan setinggi-tinggi penghargaan kepada semua isi rumah terpilih yang telah memberikan sokongan dan kerjasama dalam menjayakan penyiasatan ini. Sebarang cadangan untuk menambah baik laporan ini pada masa hadapan amatlah dihargai.

DR. HAJI ABDUL RAHMAN BIN HASAN

Ketua Perangkawan Malaysia

PREFACE

The Household Income and Basic Amenities Survey (HIS/BA) 2009 report is released for the first time by the Department of Statistics, Malaysia. The main objective of this report is to publish statistics relating to household income distribution, basic amenities and the incidence of poverty in Malaysia. Findings from the survey are used by the government for the Malaysia development plan. Individuals and private sectors researchers are also use the information published in this report as an input for their research.

Technical notes related to the objectives, scope and coverage together with concepts and definitions are included in this report to facilitate users' understanding of the survey. The information on income gathered in the survey is based on the guidelines from "A Provisional Framework for Household Income, Consumption, Saving and Wealth" (1995) published by the Australian Bureau of Statistics (ABS) as well as the guidelines from the "Final Report and Recommendations of the Expert Group on the Household Income Statistics" (The Canberra Group 2001) and Report II – Household Income and Expenditure Statistics (International Labour Organization, 2003).

I would like to take this opportunity to express my deep appreciation to all selected households for their support and co-operation in making this survey a success. Any suggestion towards improving future reports would be greatly appreciated.

DR. HAJI ABDUL RAHMAN BIN HASAN

Chief Statistician, Malaysia

PENEMUAN RINGKAS

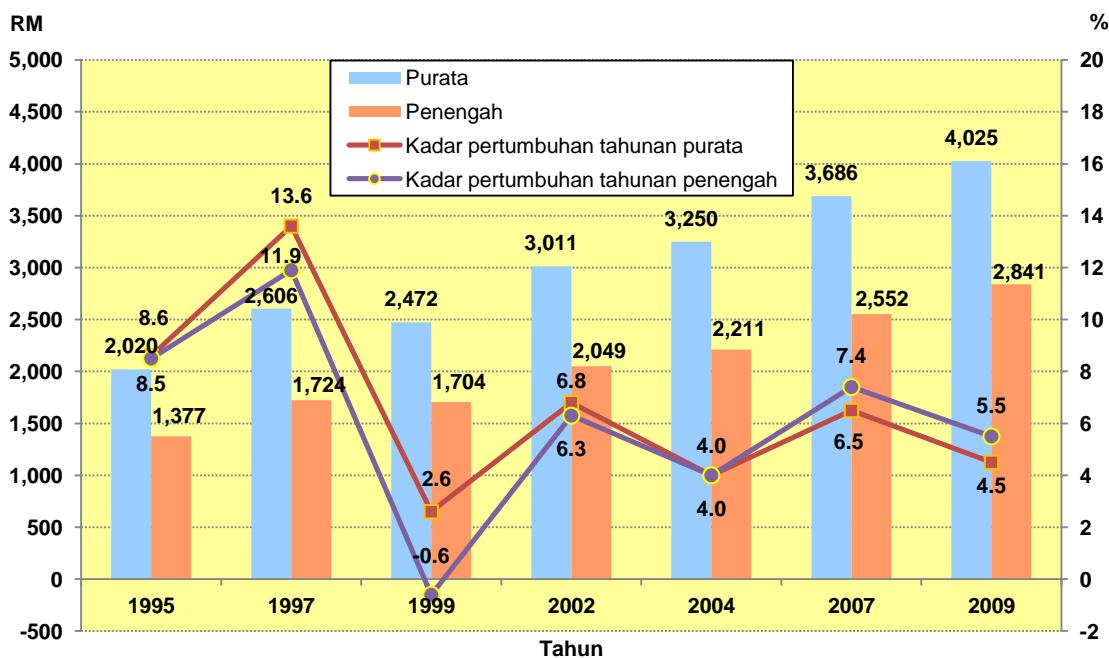

1.0 PENDAHULUAN

Laporan ini membentangkan perangkaan pendapatan isi rumah berdasarkan hasil Penyiasatan Pendapatan Isi Rumah/Kemudahan Asas (PPIR/KA) yang dijalankan pada tahun 2009. Maklumat yang diterbitkan termasuk purata, penengah pendapatan isi rumah, peratus bilangan isi rumah mengikut kelas pendapatan dan maklumat berkaitan kadar kemiskinan isi rumah di Malaysia.

2.0 PURATA DAN PENENGAH PENDAPATAN ISI RUMAH, 1995–2009

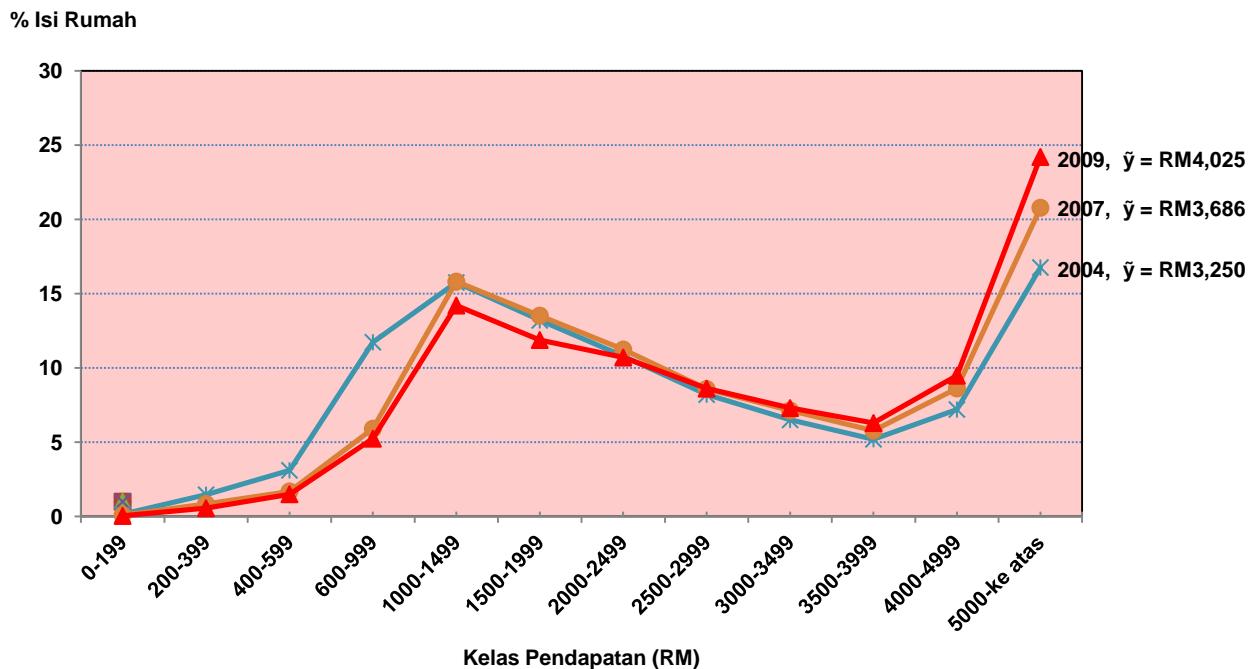

Purata pendapatan isi rumah di Malaysia pada tahun 2009 ialah RM4,025 sebulan iaitu meningkat sebanyak 9.2 peratus berbanding RM3,686 pada tahun 2007. Kadar pertumbuhan tahunan tertinggi dicatatkan pada tahun 2007 iaitu 6.5 peratus manakala kadar terendah adalah pada tahun 1999 iaitu -0.6 peratus (**Carta 1**).

Carta 1: Pendapatan isi rumah bulanan purata, penengah dan kadar pertumbuhan tahunan, Malaysia, 1995–2009

3.0 PERATUS ISI RUMAH MENGIKUT KELAS PENDAPATAN, 2004 - 2009

Isi rumah yang berpendapatan RM5,000 dan ke atas meningkat daripada 16.8 peratus pada 2004 kepada 24.2 peratus pada 2009. Manakala isi rumah yang berpendapatan di bawah RM2,500 pula menurun iaitu 56.2 peratus pada 2004 kepada 44.2 peratus pada 2009. (**Carta 2**).

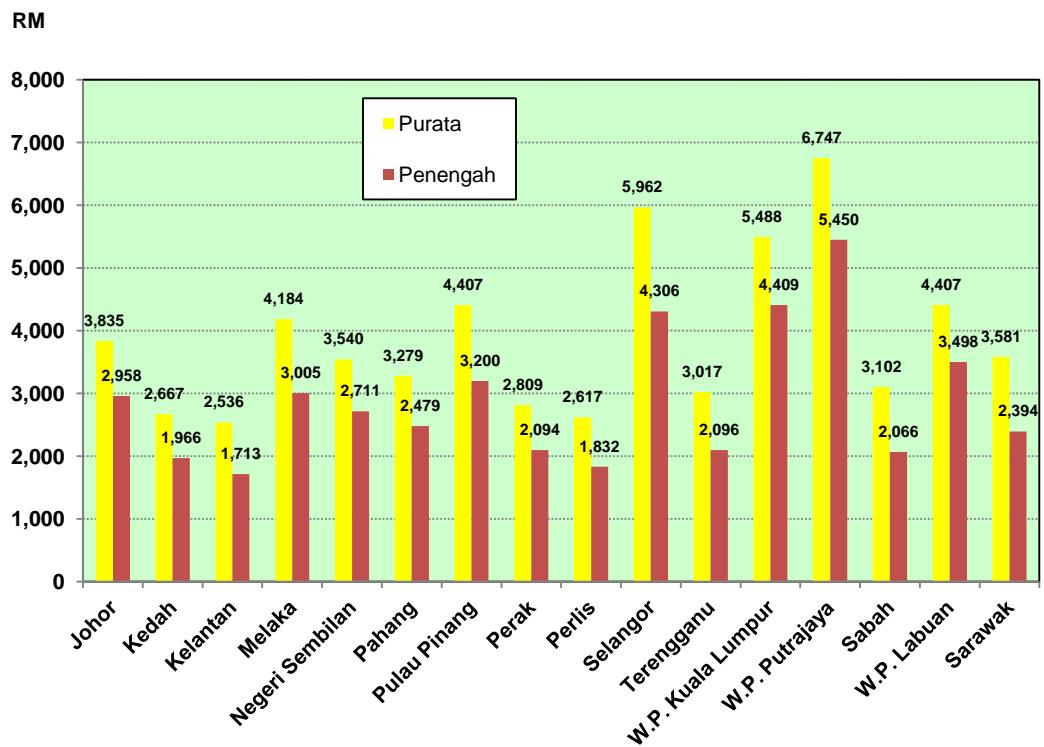

Carta 2: Peratus isi rumah mengikut kelas pendapatan, Malaysia, 2004–2009

4.0 PENDAPATAN ISI RUMAH BULANAN PURATA DAN PENENGAH MENGIKUT NEGERI, MALAYSIA, 2009

W.P. Putrajaya mencatatkan purata pendapatan isi rumah yang tertinggi sebanyak RM6,747 sebulan diikuti oleh Selangor (RM5,962) dan W.P. Kuala Lumpur (RM5,488). Tiga negeri mencatatkan purata pendapatan isi rumah yang melebihi RM4,000 sebulan iaitu Melaka (RM4,184), Pulau Pinang (RM4,407) dan W.P. Labuan (RM4,407). Negeri yang mencatatkan purata pendapatan isi rumah yang terendah adalah Kelantan (RM2,536), Perlis (RM2,617) dan Kedah (RM2,667).

Penengah pendapatan isi rumah tertinggi ialah W.P. Putrajaya (RM5,450) diikuti oleh W.P. Kuala Lumpur (RM4,409) dan Selangor (RM4,306). Tiga negeri mencatatkan nilai penengah purata pendapatan di bawah RM2,000 sebulan iaitu Kedah (RM1,966), Perlis (RM1,832) dan Kelantan (RM1,713) (**Carta 3**).

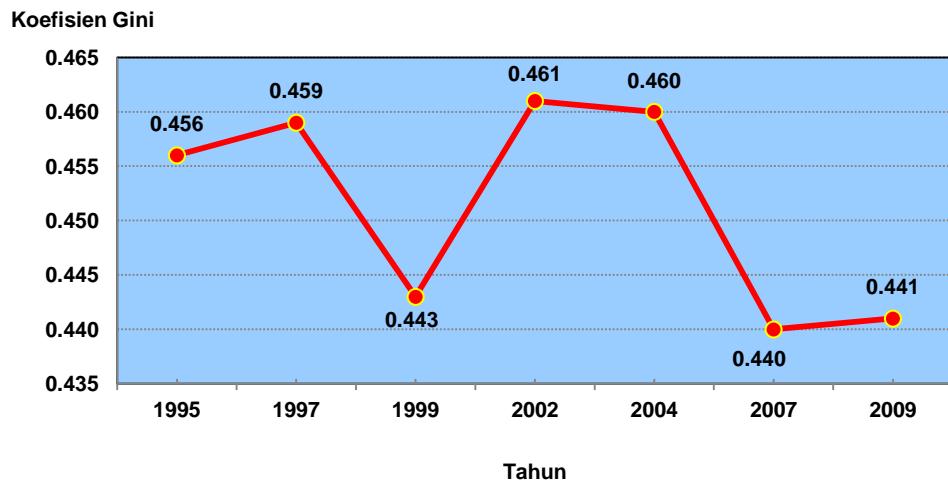

Carta 3: Pendapatan isi rumah bulanan purata dan penengah mengikut negeri, Malaysia, 2009

5.0 KOEFISIEN GINI BAGI PENDAPATAN ISI RUMAH BULANAN, MALAYSIA, 1995–2009

Koefisien Gini (G) ialah ukuran pemusatan pendapatan berdasarkan Keluk Lorenz. Keluk ini didapati dengan memplot peratus isi rumah kumulatif pada paksi X dan peratus jumlah pendapatan kumulatif yang diterima oleh isi rumah pada paksi Y. Nilai koefisien Gini berada antara 0 dan 1, di mana 0 menunjukkan agihan pendapatan yang saksama, manakala nilai 1 menunjukkan agihan pendapatan yang paling tidak saksama. Nilai koefisien Gini bagi pendapatan isi rumah di Malaysia pada tahun 2009 adalah 0.441 berbanding 0.440 pada tahun 2007. Dalam tempoh 1995–2009 nilai tertinggi koefisien Gini dicatatkan pada tahun 2002 (0.461) manakala nilai terendah adalah pada tahun 2007 (0.440) (**Carta 4**).

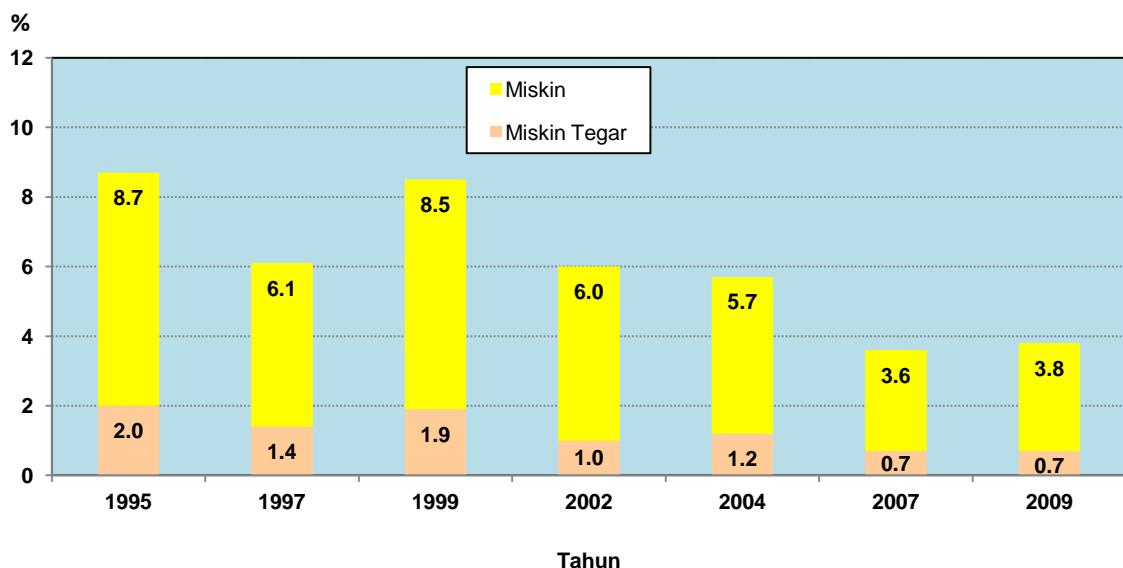

Carta 4: Koefisien Gini bagi pendapatan isi rumah bulanan, Malaysia, 1995–2009

6.0 INSIDEN KEMISKINAN DI MALAYSIA, 1995–2009

Insiden kemiskinan di Malaysia menunjukkan trend yang menurun sejak tahun 1995. Kadar kemiskinan yang dicatatkan pada tahun 1995 adalah 8.7 peratus berbanding 3.8 peratus pada tahun 2009. Pada tahun 1999, kadar kemiskinan melonjak kepada 8.5 peratus berbanding 6.1 peratus pada tahun 1997. Kadar kemiskinan tegar menurun pada tempoh 2002–2009 daripada 1.0 peratus kepada 0.7 peratus (**Carta 5**).

Carta 5: Insiden kemiskinan, Malaysia, 1995–2009

SUMMARY FINDINGS

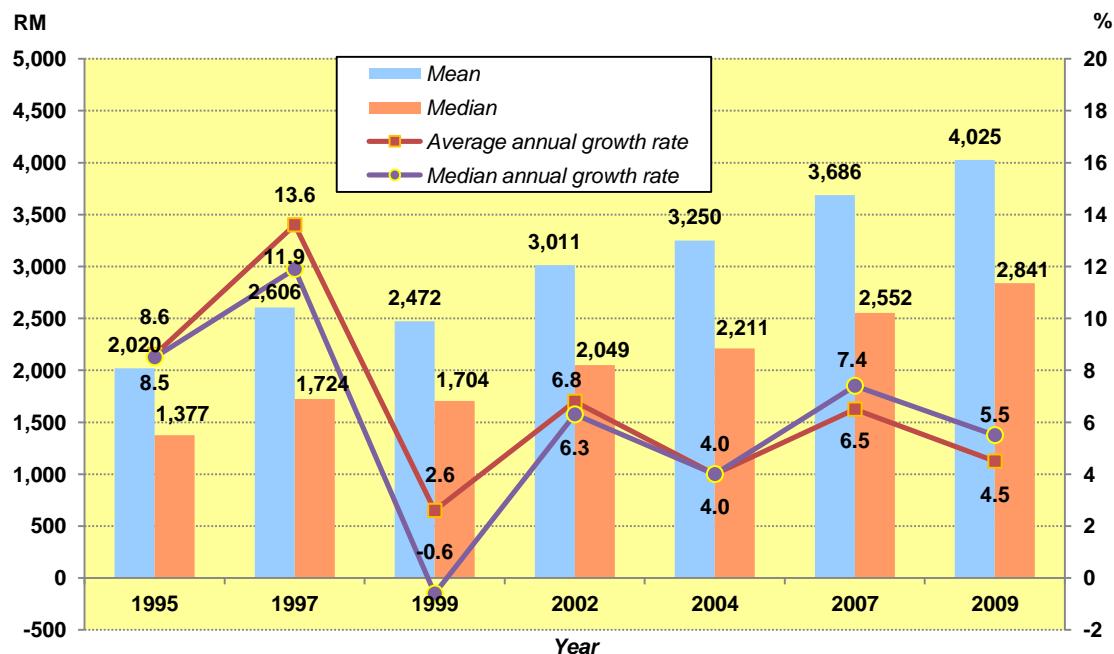

1.0 INTRODUCTION

This report presents statistics on household income based on the Household Income /Basic Amenities Survey (HIS/BA) conducted in 2009. The information published included mean, median of the household income, percentage of the number of households by income class and information related to incidence of poverty in Malaysia.

2.0 MEAN AND MEDIAN OF HOUSEHOLD INCOME, 1995–2009

The mean household income for Malaysia was recorded at RM4,025 per month in 2009, an increase of 9.2 per cent as compared to RM3,686 in 2007. The highest annual growth was recorded in 2007 at 6.5 per cent while the lowest was recorded in 1999 (-0.6 per cent) (Chart 1).

Chart 1: Mean, median and annual growth rate of monthly household income, Malaysia, 1995–2009

3.0 PERCENTAGE OF HOUSEHOLD BY INCOME CLASS, 2004–2009

The percentage of households in the income class of RM5,000 and above shows an increased from 16.8 per cent to 24.2 per cent in the year of 2009 as compared in 2004. Meanwhile, the percentage of households in the income class of below RM2,500 decreased to 44.2 per cent in 2009 as compared to 56.2 per cent in 2004 (Chart 2).

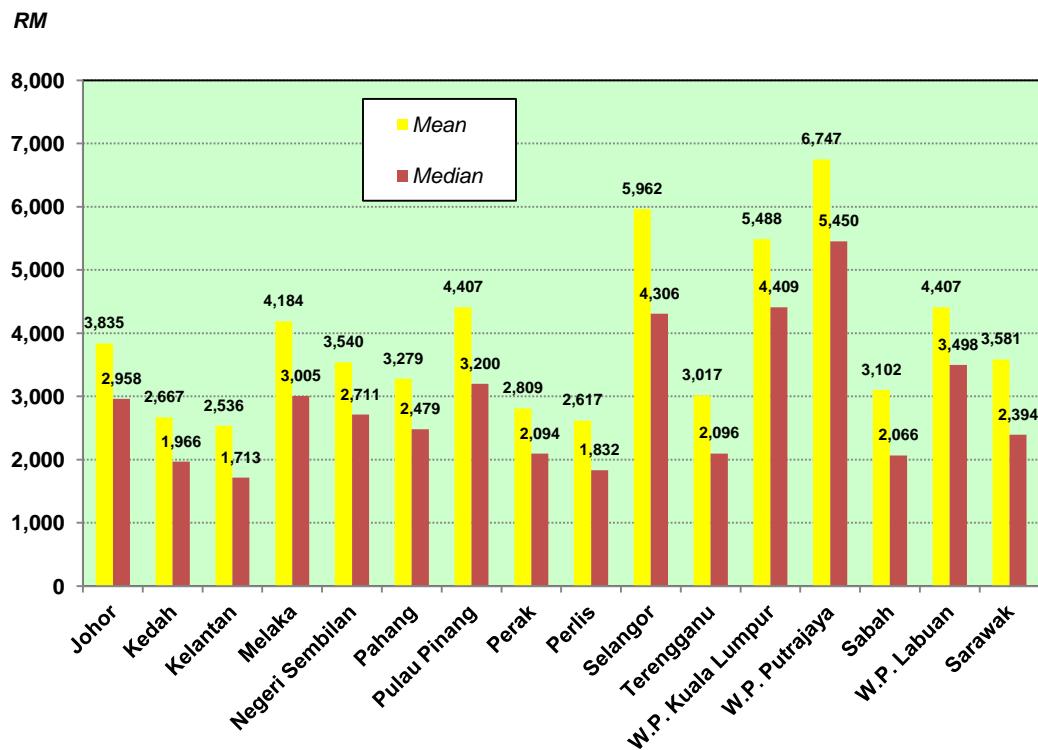

Chart 2: Percentage of household by income class, Malaysia, 2004–2009

4.0 MEAN AND MEDIAN MONTHLY HOUSEHOLD INCOME BY STATE, MALAYSIA, 2009

W.P. Putrajaya recorded the highest average household income amounting to RM6,747 per month followed by Selangor (RM5,962) and W.P. Kuala Lumpur (RM5,488). Three states recorded the average monthly household income of above RM4,000 per month that is Melaka (RM4,184), Pulau Pinang (RM4,407) and W.P. Labuan (RM4,407). The states which recorded the lowest average monthly household income were Kelantan (RM2,536), Perlis (RM2,617) and Kedah (RM2,667).

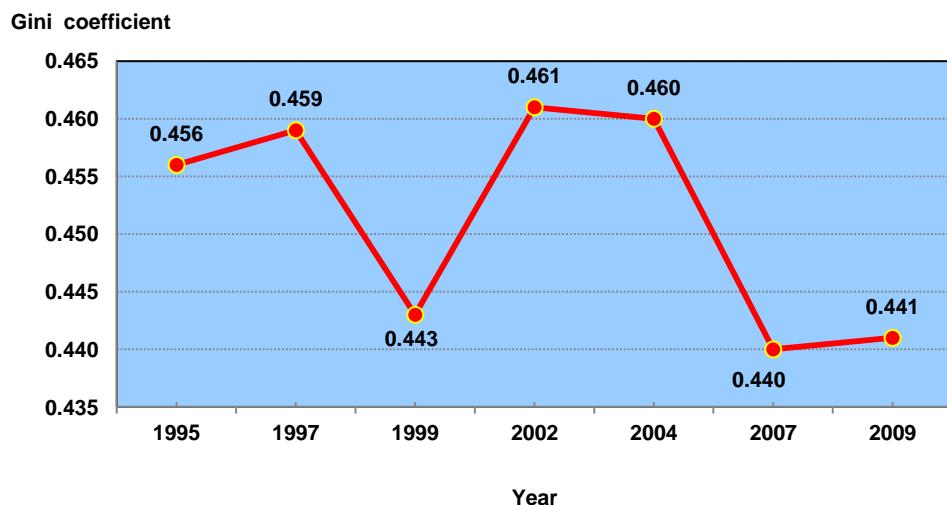

The highest median of monthly household income was W.P. Putrajaya (RM5,450) followed by W.P. Kuala Lumpur (RM4,409) and Selangor (RM4,306). Three states that recorded the median of monthly household income of below RM2,000 were Kedah (RM1,966), Perlis (RM1,832) and Kelantan (RM1,713) (**Chart 3**).

Chart 3: Mean and median of monthly household income by state, Malaysia, 2009

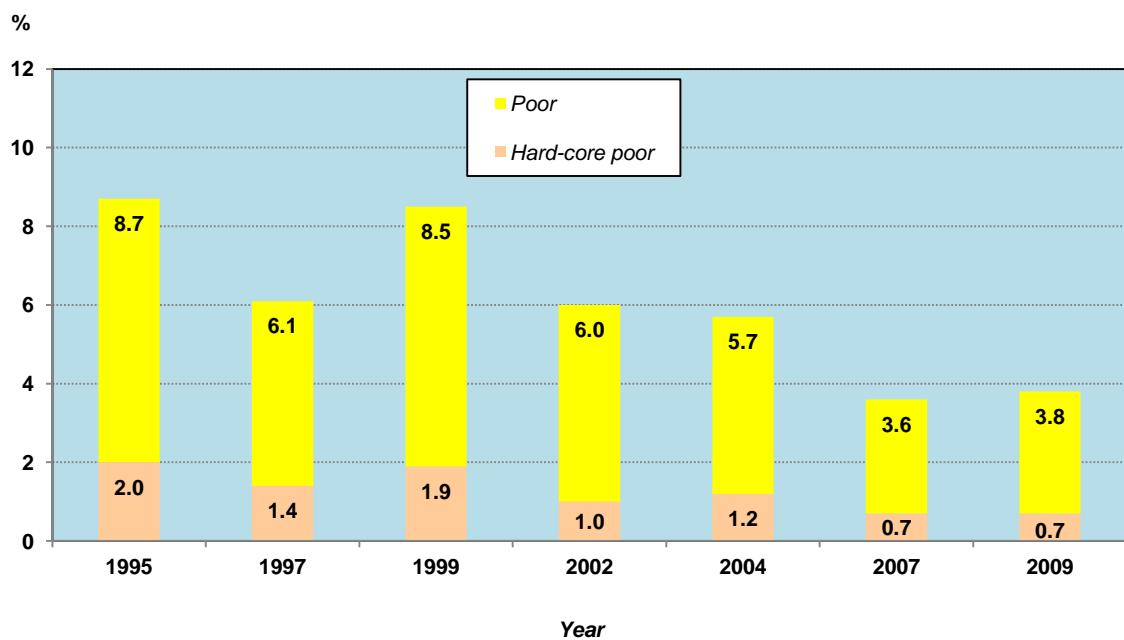

5.0 GINI COEFICIENT OF THE MONTHLY HOUSEHOLD INCOME, MALAYSIA, 1995–2009

The Gini coefficient (G) is a measure of income concentration derived from the Lorenz Curve. The curve is obtained by plotting the cumulative per cent of households on the X axis against the cumulative per cent of the aggregate income received by these households on the Y axis. The value of the Gini coefficient ranges from 0 to 1 where 0 denotes complete equality of income share and 1 represents total inequality of income share. The Gini coefficient of household income for 2009 in Malaysia was 0.441 as compared to 0.440 in 2007. During the period of 1995–2009 the highest Gini coefficient was recorded in 2002 (0.461) while the lowest was recorded in 2007 (0.440) (Chart 4).

Chart 4: Gini coefficient of monthly household income, Malaysia, 1995–2009

6.0 INCIDENCE OF POVERTY IN MALAYSIA, 1995–2009

The incidence of poverty in Malaysia showed a declining trend since 1995. The poverty rate recorded in 1995 was 8.7 per cent as compared to 3.8 per cent in 2009. In 1999, the poverty rate leaped to 8.5 per cent as compared to 6.1 per cent in 1997. The hard core poverty rate showed a decline for the period of 2002–2009 from 1.0 per cent to 0.7 per cent (**Chart 5**).

Chart 5: Incidence of poverty, Malaysia, 1995–2009

NOTA TEKNIKAL

NOTA TEKNIKAL

1. Pendahuluan

Penyiasatan Pendapatan Isi Rumah/Kemudahan Asas (PPIR/KA) 2009 merupakan penyiasatan pendapatan terkini yang dijalankan oleh Jabatan Perangkaan Malaysia selepas penyiasatan terakhir dijalankan pada tahun 2007. Penyiasatan ini dijalankan dengan kekerapan dua kali dalam tempoh lima tahun. Penerbitan ini menyediakan data pendapatan, kemiskinan dan kemudahan asas di peringkat nasional dan negeri bagi **warganegara sahaja**.

2. Objektif penyiasatan

2.1 Objektif utama penyiasatan adalah seperti berikut:

- mengumpul maklumat pola taburan pendapatan isi rumah;
- mengenal pasti golongan miskin; dan
- mengenal pasti tahap kemudahan asas yang dinikmati oleh isi rumah miskin.

2.2 Data daripada penyiasatan ini digunakan oleh kerajaan sebagai input dalam pembentukan pelan pembangunan negara terutamanya dalam penyediaan Rancangan Malaysia Kesepuluh.

3. Kaedah pengumpulan data

3.1 Pengumpulan data dijalankan dengan menggunakan kaedah temu ramah bersemuka. Pegawai dan anggota Jabatan yang terlibat dalam penyiasatan ini diberikan latihan khusus sebagai penemu ramah. Mereka akan melawat isi rumah (IR) di tempat kediaman terpilih bagi mengumpul maklumat berkaitan demografi, pendapatan dan kemudahan asas dengan menggunakan borang soal selidik.

3.2 Penyemakan kerja luar dibuat oleh pegawai berpengalaman dari Jabatan Perangkaan Negeri bagi mengesan dan membetulkan sebarang kesilapan atau maklumat yang tertinggal ketika penyiasatan. Di samping itu, temu ramah ulangan bagi sesetengah isi rumah terpilih dilaksanakan bagi memastikan kualiti data yang dipungut.

4. Tempoh rujukan

Tempoh rujukan bagi maklumat pendapatan isi rumah adalah bagi tempoh dua belas bulan yang lalu. Sebagai contohnya, jika bulan penyiasatan ialah Julai 2009, maka pendapatan yang dikira adalah dari 1 Julai 2008 sehingga 30 Jun 2009. Tempoh PPIR/KA 2009 adalah berbeza berbanding dengan penyiasatan yang lepas di mana PPIR/KA 2009 bermula pada bulan April 2009 dan berakhir pada Mac 2010 manakala bagi PPIR/KA 2007 bermula pada bulan Julai 2007 dan berakhir pada Disember 2007.

5. Liputan dan skop

- 5.1 Penyiasatan ini meliputi kedua-dua kawasan bandar dan luar bandar bagi negeri-negeri di Malaysia **kecuali** Blok Penghitungan (BP) Orang Asli di Semenanjung Malaysia. Pada kebiasaananya, BP yang berada di kawasan pedalaman tidak diliputi dalam rangka pensampelan. Walau bagaimanapun, bagi penyiasatan yang terkini, Jabatan telah memperluaskan liputan penyiasatan dengan melibatkan BP di kawasan ini.
- 5.2 Penyiasatan ini meliputi isi rumah yang tinggal di tempat kediaman (TK) persendirian sahaja. Isi rumah institusi iaitu mereka yang tinggal di asrama, hotel, hospital, rumah orang tua, berek tentera dan polis, penjara, rumah kebajikan dan institusi lain yang serupa tidak dimasukkan dalam rangka penyiasatan.
- 5.3 Maklumat terperinci tentang pendapatan diperoleh daripada ahli isi rumah yang **menerima pendapatan**. Berdasarkan kepada garis panduan *A Provisional Framework for Household Income, Consumption, Saving and Wealth* yang diterbitkan oleh *Australian Bureau of Statistics (ABS)* dan *Final Report and Recommendations of the Expert Group on the Household Income Statistics (The Canberra Group 2001)*, punca pendapatan adalah merangkumi:
 - (i) penerimaan daripada **pekerjaan bergaji** (termasuk upah dan gaji, elauan tunai, bonus, komisen, bayaran kerja lebih masa, makanan percuma, tempat menginap percuma atau konsesi, barang pengguna percuma atau konsesi, bayaran berupa mata benda dan pencaruman majikan kepada KWSP/ PERKESO);

- (ii) pendapatan daripada **bekerja sendiri** (termasuk nilai barang yang dikeluarkan di rumah untuk kegunaan sendiri);
- (iii) pendapatan daripada **harta benda** (termasuk royalti, sewaan, faedah dan dividen);
- (iv) **penerimaan pindahan semasa** (termasuk penerimaan wang daripada isi rumah lain, bayaran nafkah, biasiswa, *fellowships*, pencen, pembayaran berkala daripada harta pusaka atau tabung amanah dan hadiah berupa wang tunai atau mata benda yang diterima); dan
- (v) **lain-lain pendapatan** (termasuk sewa dinilai bagi rumah yang diduduki oleh pemilik).

5.4 Komponen kemudahan asas yang diliputi adalah pendidikan, kesihatan, perumahan dan peralatan isi rumah. Walau bagaimanapun bagi tujuan penerbitan, hanya maklumat terpilih sahaja diberi perhatian untuk menggambarkan tahap kemudahan asas yang dinikmati oleh penduduk, khususnya isi rumah miskin.

- (i) **Persekolahan** meliputi jarak institusi pendidikan dari tempat kediaman. Bagi kanak-kanak yang dalam lingkungan umur bersekolah tetapi tidak bersekolah, sebab utama mereka tidak bersekolah akan ditanya;
- (ii) **Kesihatan** meliputi maklumat tentang jarak institusi kesihatan kerajaan atau swasta dari tempat kediaman;
- (iii) **Perumahan** meliputi maklumat seperti jenis pemilikan, keadaan rumah, bilangan bilik tidur, jenis bahan binaan untuk dinding luar, jenis tandas yang digunakan, kemudahan bekalan air, kemudahan bekalan elektrik dan kemudahan kutipan sampah; dan
- (iv) **Peralatan isi rumah** meliputi peralatan yang dimiliki oleh ahli isi rumah untuk kegunaan sendiri seperti kereta, mesin basuh, telefon dan sebagainya.

6. Rangka pensampelan

- 6.1 Rangka yang digunakan bagi pemilihan sampel PPIR/KA 2009 adalah berdasarkan Rangka Pensampelan Isi Rumah Kebangsaan (RPIK) yang terdiri daripada blok penghitungan (BP) yang diwujudkan untuk Banci Penduduk dan Perumahan 2000. BP dari segi geografi adalah suatu kawasan muka bumi yang diwujudkan secara rekaan dan mempunyai sempadan tertentu. Secara purata, BP mengandungi antara 80 hingga 120 TK. Pada amnya, kesemua BP dibentuk di dalam lingkungan sempadan yang diwartakan iaitu di dalam daerah pentadbiran, mukim atau pihak berkuasa tempatan.
- 6.2 BP dalam rangka pensampelan dikelaskan mengikut kawasan bandar dan luar bandar. Kawasan bandar ditakrif sebagaimana yang telah digunakan dalam Banci Penduduk dan Perumahan 2000. Kawasan bandar ialah kawasan yang diwartakan serta kawasan tepu bina yang bersempadan dengannya dan gabungan kedua-dua kawasan ini mempunyai penduduk seramai 10,000 orang atau lebih semasa Banci Penduduk dan Perumahan 2000. Kawasan selainnya yang diwartakan dan mempunyai jumlah penduduk kurang daripada 10,000 orang serta kawasan yang tidak diwartakan dikelaskan sebagai luar bandar.
- 6.3 Kawasan tepu bina adalah kawasan yang terletak bersebelahan kawasan yang diwartakan dan mempunyai sekurang-kurangnya 60 peratus penduduk (berumur 10 tahun dan lebih) yang terlibat dalam aktiviti bukan pertanian serta unit-unit perumahannya mempunyai kemudahan tandas moden.
- 6.4 Perbandaran merupakan proses yang dinamik dan sentiasa berubah mengikut kemajuan dan pembangunan. Oleh itu, kawasan bandar bagi banci tahun 1991 dan 2000, tidak semestinya merujuk kepada kawasan yang sama kerana kawasan yang memenuhi kriteria bandar akan terus bertambah dan berkembang mengikut masa.

6.5 Pengelasan kawasan mengikut strata yang digunakan adalah seperti berikut:

Strata	Jumlah penduduk dalam kawasan yang diwartakan dan tepubina
(i) Metropolitan	75,000 dan lebih
(ii) Bandar Besar	10,000 hingga 74,999
(iii) Bandar Kecil	1,000 hingga 9,999
(iv) Luar Bandar	Kawasan selebihnya

6.6 Bagi tujuan pensampelan, pengelasan yang luas seperti di atas adalah memadai untuk semua negeri serta Wilayah Persekutuan. Namun bagi Sabah dan Sarawak, memandangkan masalah kesukaran untuk akses ke kawasan pedalaman, strata luar bandar dipecahkan lagi berdasarkan kepada jangka waktu yang diambil untuk sampai ke sesuatu tempat dari pusat bandar yang terdekat.

6.7 Bagi tujuan penjadualan, strata-strata dicantumkan seperti berikut:

$$\begin{aligned}\text{Bandar} &= \text{Metropolitan} + \text{Bandar besar} \\ \text{Luar bandar} &= \text{Bandar kecil} + \text{Keseluruhan luar bandar}\end{aligned}$$

7. Reka bentuk pensampelan

7.1 Reka bentuk pensampelan berstrata dua peringkat telah digunakan yang mana pembentukan strata adalah seperti berikut:

- i) Strata utama - terdiri daripada negeri-negeri di Malaysia
- ii) Strata kedua - terdiri daripada strata bandar dan luar bandar seperti yang dinyatakan di perkara 6.5 dan dibentuk dalam strata utama.

7.2 Sampel-sampel telah dipilih secara bebas bagi setiap peringkat pada strata kedua. Unit pensampelan peringkat pertama ialah BP manakala unit pensampelan peringkat kedua ialah TK dalam BP tersebut. TK terpilih meliputi kesemua isi rumah dan orang yang tinggal di dalamnya. Di setiap peringkat pemilihan, unit-unit telah dipilih secara sistematik dengan kebarangkalian yang sama dalam strata kedua.

8. Saiz sampel

- 8.1 Saiz sampel yang diperlukan adalah berdasarkan kepada ralat piawai relatif data penyiasatan terdahulu bagi setiap strata dan negeri. Faktor lain seperti kos dan keperluan anggota juga diambil kira dalam menentukan saiz sampel.
- 8.2 Saiz sampel yang terpilih adalah seperti berikut:

Jadual 1: Taburan bilangan BP, TK Terpilih dan bilangan isi rumah yang respons mengikut negeri

Negeri	Bilangan BP	Bilangan TK	Bilangan IR yang Respons
Johor	587	4,696	4,182
Kedah	364	2,912	3,222
Kelantan	435	3,480	3,681
Melaka	199	1,592	1,527
Negeri Sembilan	212	1,696	1,531
Pahang	280	2,240	2,072
Perak	457	3,656	3,361
Perlis	155	1,240	1,196
Pulau Pinang	382	3,056	3,286
Selangor	726	5,808	5,865
Terengganu	290	2,320	2,574
W.P. Kuala Lumpur	452	3,616	2,746
W.P. Putrajaya	52	416	365
Semenanjung Malaysia	4,591	36,728	35,608
Sabah	748	5,984	5,750
W.P. Labuan	83	664	581
Sarawak	498	3,984	3,866
Malaysia	5,920	47,360	45,805

9. Konsep dan definisi

9.1 Tempat kediaman

Tempat Kediaman adalah suatu struktur yang dibina berasingan dan bebas yang lazimnya digunakan untuk tempat tinggal. Takrifan perkataan **berasingan** dan **bebas** adalah seperti berikut:

Berasingan

Struktur dianggap sebagai berasingan jika ia dikelilingi oleh dinding, pagar dan sebagainya serta ditutupi oleh bumbung.

Bebas

Struktur dikatakan bebas apabila ia mempunyai jalan masuk terus dari tangga umum, tempat lalu lintas atau ruang lapang (iaitu penghuni boleh masuk atau keluar dari tempat kediaman mereka tanpa melalui perkarangan orang lain).

9.2 Isi rumah

Isi rumah ditakrifkan sebagai seorang atau sekumpulan orang yang bersaudara dan/atau orang yang tidak bersaudara yang biasanya tinggal bersama dan membuat peruntukan yang sama untuk makanan dan keperluan hidup yang lain.

9.3 Pendapatan isi rumah

Pendapatan isi rumah ialah jumlah pendapatan terakru kepada ahli isi rumah, dalam bentuk wang tunai dan/atau mata benda yang berlaku berulang kali dalam jangka masa setahun atau lebih kerap lagi.

9.4 Penerima pendapatan

Penerima pendapatan merujuk kepada ahli isi rumah yang menerima pendapatan dalam tempoh rujukan.

9.5 Kumpulan etnik

Klasifikasi kumpulan etnik adalah berdasarkan klasifikasi yang telah digunakan dalam Banci Penduduk dan Perumahan 2000. Pengelasan tersebut adalah seperti berikut:

<u>Semenanjung Malaysia</u>	<u>Sabah, Sarawak & W.P. Labuan</u>
Warganegara Malaysia	Warganegara Malaysia
Bumiputera	Bumiputera
Cina	Cina
India	Lain-lain
Lain-lain	
Bukan warganegara	Bukan warganegara

9.6 Kemiskinan

Konsep kemiskinan yang digunakan adalah berdasarkan kepada kaedah yang telah diperkenal pada tahun 2004 iaitu dengan mengambil kira PGK makanan dan PGK bukan makanan bagi setiap isi rumah yang dilawati. PGK ditakrifkan secara berasingan bagi setiap isi rumah dalam PPIR/KA. Setiap PGK ini mengambil kira perkara-perkara berikut:

(i) Saiz isi rumah dan komposisi demografi

Isi rumah yang mempunyai bilangan ahli yang ramai memerlukan lebih perbelanjaan untuk makanan dan bukan makanan bagi mencapai taraf hidup yang memuaskan untuk semua ahlinya. Oleh kerana keperluan kalori berbeza di antara jantina dan peringkat umur, maka PGK makanan akan berbeza mengikut komposisi demografi isi rumah.

(ii) Lokasi isi rumah: Negeri dan strata (bandar/luar bandar)

Harga bagi makanan dan bukan makanan berbeza secara ketara antara negeri dan antara kawasan bandar dengan luar bandar. Sebagai contoh, harga di Kuala Lumpur biasanya lebih tinggi daripada kawasan lain. PGK baru ini mengambil kira perbezaan harga ini.

9.7 Sesebuah isi rumah dalam PPIR/KA dianggap **miskin** jika **pendapatannya kurang daripada PGKnya**. Ini bermaksud isi rumah tersebut kekurangan sumber untuk memenuhi keperluan asas makanan dan bukan makanan bagi setiap ahlinya. Sesebuah isi rumah dianggap **miskin tegar** jika **pendapatannya kurang daripada PGK makanannya**. PGK bagi setiap isi rumah adalah berbeza mengikut lokasi (negeri dan strata), saiz isi rumah dan komposisi demografi.

9.8 PGK Makanan

Komponen makanan dalam PGK ini ditetapkan berdasarkan kepada nasihat pakar pemakanan, pakar diet dan pakar perubatan daripada Kementerian Kesihatan, Universiti Kebangsaan Malaysia dan Universiti Putra Malaysia. Jumlah keperluan kilo kalori bagi satu keluarga seramai 5 orang ialah sebanyak 8,725 sehari. Keperluan harian kilo kalori bagi setiap individu adalah mengandungi pemakanan yang seimbang yang terdiri daripada bijirin dan produk bijirin (beras, tepung gandum); ayam, telur dan ikan; susu; minyak dan lemak; gula; sayur-sayuran dan buah-buahan; dan kekacang. Keperluan kilo kalori seterusnya ditukarkan kepada nilai ringgit mengikut harga runcit setiap kawasan.

9.9 PGK Bukan Makanan

Komponen PGK Bukan Makanan dikira berasaskan kepada pola perbelanjaan isi rumah berpendapatan rendah yang dikenal pasti melalui Penyiasatan Perbelanjaan Isi Rumah.

Komponen PGK bukan makanan ialah:

- Pakaian dan kasut;
- Sewa kasar, bahan api dan kuasa;
- Barang tahan lama (perabot, peralatan dan kelengkapan isi rumah)
- Pengangkutan dan perhubungan; dan
- Lain-lain perkara bukan makanan

Jadual 2: Pendapatan Garis Kemiskinan bagi tahun 2009 mengikut kawasan

Kawasan	Jumlah	Bandar	Luar Bandar
(RM) sebulan			
Semenanjung Malaysia	763	771	743
Sabah/W.P. Labuan	1,048	1,022	1,082
Sarawak	912	938	884
Malaysia	800	800	801

9.10 Pengiraan Kadar Kemiskinan

PGK bagi setiap isi rumah adalah berbeza mengikut lokasi (negeri dan strata), saiz isi rumah dan komposisi demografi. Kadar kemiskinan isi rumah kemudian dikira dengan menggunakan dua cara seperti berikut:

(i) **Kadar Kemiskinan**

Pengiraan ini merangkumi kesemua isi rumah yang mempunyai pendapatan kasar bulanan di bawah **Pendapatan Garis Kemiskinan**. Formula bagi pengiraan Kadar Kemiskinan (KK) ialah:

$$\text{KK} = \frac{\text{Bilangan isi rumah berpendapatan di bawah PGKnya}}{\text{Jumlah isi rumah}} \times 100$$

(ii) **Kadar Kemiskinan Tegar**

Pengiraan ini merangkumi kesemua isi rumah yang mempunyai pendapatan kasar bulanan di bawah **Pendapatan Garis Kemiskinan Makanan**.

Formula bagi pengiraan Kadar Kemiskinan Tegar (KKT) ialah:

$$\text{KKT} = \frac{\text{Bilangan isi rumah berpendapatan di bawah PGK makanannya}}{\text{Jumlah isi rumah}} \times 100$$

10. Penilaian data

Data yang diperoleh daripada penyiasatan berdasarkan pemilihan sampel berkemungkinan mempunyai dua jenis ralat. Ralat yang dimaksudkan ialah ralat pensampelan dan ralat bukan pensampelan.

(i) Ralat Pensampelan

Ralat pensampelan berpunca daripada anggaran data yang dibuat berdasarkan sampel berkebarangkalian, bukan berdasarkan banci. Dari segi

statistik, ralat ini dikenali sebagai ralat piawai relatif (*RPR*) dan dinyatakan dalam bentuk peratusan. Ia digunakan sebagai penunjuk kepada kepersisan anggaran parameter yang dikaji. Dengan kata lain ia boleh memberi gambaran tahap variasi anggaran penyiasatan berbanding dengan anggaran lain yang berdasarkan pemilihan sampel.

Bagi PPIR/KA 2009, pendapatan isi rumah kasar bulanan purata peringkat Malaysia ialah RM4,025 dengan RSE 0.63 peratus. Dalam erti kata lain, ralat piawai (RP) ialah lebih kurang RM25. Dengan andaian pendapatan isi rumah purata tertabur secara normal, maka selang keyakinan anggaran pendapatan purata dapat dihitung. Berasaskan 95 peratus paras keyakinan ($\alpha=0.05$), pendapatan isi rumah kasar bulanan purata boleh berada dalam batasan antara RM3,975.75 – RM4,074.89 sebulan.

(ii) Ralat Bukan Pensampelan

Bagi memastikan kualiti data berada pada tahap yang tinggi, beberapa langkah telah diambil supaya **ralat bukan pensampelan** berada di tahap minima. Berbeza dengan ralat pensampelan, ralat ini tidak boleh diukur dan hanya boleh diatasi melalui beberapa langkah pentadbiran. Ralat ini boleh berpunca daripada liputan penyiasatan yang tidak lengkap, kelemahan rangka, ralat maklumbalas, ralat tiada sambutan dan kesilapan semasa prosesan seperti di peringkat penyuntingan, pengekodan dan tangkapan data.

Ralat maklum balas boleh berlaku disebabkan kesukaran dan perbezaan dalam tafsiran soalan, sama ada daripada penemu ramah ataupun responden. Bagi meminimumkan ralat ini, latihan intensif kepada penyelia dan penemu ramah telah dijalankan. Tambahan pula, semakan rambang dijalankan ke atas isi rumah yang telah diliputi oleh penemu ramah untuk memastikan kesahihan maklumbalas yang dicatatkan. Untuk memastikan liputan penyiasatan yang menyeluruh, rangka sampel dikemaskini dan tempat kediaman telah dipilih selepas penyenaraian BP dijalankan.

Ralat tiada sambutan berpunca daripada beberapa sebab seperti TK kosong, tiada orang di rumah, enggan bekerjasama atau TK tidak layak diliputi dalam penyiasatan. Bagi mengatasi kes-kes yang sedemikian,

penganggaran saiz sampel yang ditentukan dalam penyiasatan ini telah mengambil kira semua kemungkinan yang akan dihadapi seperti yang dinyatakan. Bagi PPIR/KA 2009, bilangan isi rumah yang respon mengikut negeri adalah seperti di Jadual 1.

Pengemaskinian rangka pensampelan dengan lebih kerap dipergiatkan bagi mengurangkan kadar tiada sambutan berpunca daripada TK kosong,. Publisiti yang meluas dilaksanakan melalui media elektronik serta media cetak bagi mengurangkan kes tiada orang di rumah dan enggan bekerjasama. Berhubung dengan ralat penyuntingan dan prosesan, beberapa peringkat semakan konsistensi telah diwujudkan, sama ada secara manual atau dengan bantuan komputer bagi memastikan penghasilan data yang bermutu dan boleh diterima pakai.

11. Pekali Gini

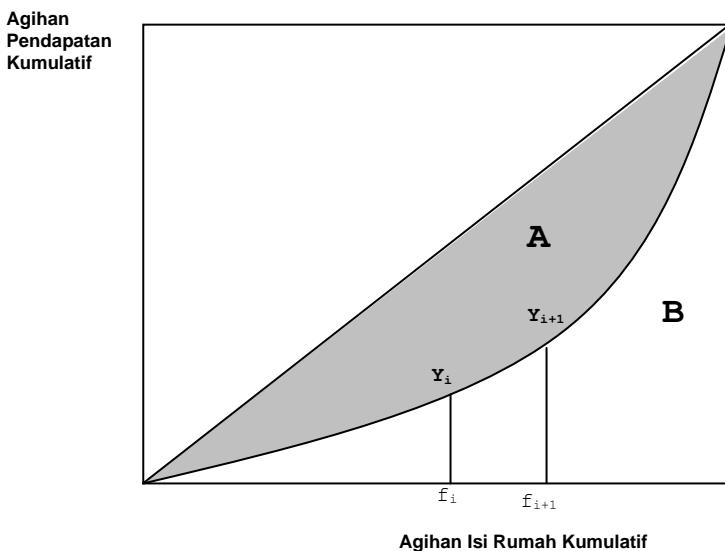

- 11.1 Pekali Gini (G) ialah ukuran pemerataan pendapatan berdasarkan Keluk Lorenz. Keluk ini didapati dengan memplot peratus isi rumah kumulatif pada paksi X dan peratus jumlah pendapatan kumulatif yang diterima oleh isi rumah pada paksi Y. [Nilai pekali Gini berada antara 0 dan 1, di mana 0 menunjukkan agihan pendapatan yang saksama, manakala nilai 1 menunjukkan agihan pendapatan yang paling tidak saksama.]
- 11.2 Pekali Gini (G) ditakrifkan sebagai nisbah kadaran keluasan di antara garis pepenjuru dan keluk Lorenz (A) kepada keluasan di bawah garis pepenjuru ($A+B$) seperti dalam Rajah 1, di mana

$$G = \frac{A}{A+B} = \frac{\text{Luas kawasan antara keluk dan pepenjuru}}{\text{Luas kawasan di bawah garis pepenjuru}}$$
$$= \frac{0.5 - \text{luas kawasan di bawah keluk}}{0.5}$$

atau secara matematiknya:

$$G = 1 - \sum_i^k (f_{i+1} - f_i) (Y_i + Y_{i+1})$$

RAJAH 1
Keluk Lorenz

12. Kadar pertumbuhan purata tahunan

Pengiraan kadar pertumbuhan purata tahunan adalah berdasarkan kepada fungsi geometrik seperti berikut:

$$r = (Y_t | Y_0)^{(1|t)} - 1$$

di mana;

r kadar pertumbuhan purata tahunan;

Y purata pendapatan isi rumah;

t tempoh masa.

13. Batasan ukuran pendapatan

Bagi tujuan penjadualan, pendapatan kasar isi rumah telah digunakan. Pendapatan kasar isi rumah tidak mengambil kira bayaran pindahan semasa terutama cukai pendapatan yang dibayar oleh isi rumah yang berpendapatan tinggi. Begitu juga, kesan taburan perbelanjaan awam tidak digambarkan dalam penyiasatan kerana kesukaran untuk mengira faedahnya sebagai sebahagian daripada pendapatan isi rumah. Perbelanjaan awam sedemikian akan menguntungkan isi rumah yang berpendapatan rendah yang mana imputasi ke atas faedah-faedah tersebut akan

meningkatkan jumlah pendapatan mereka. Sebaliknya, penggunaan data pendapatan bersih, setelah ditolak cukai pendapatan, akan mengurangkan jumlah pendapatan bagi isi rumah yang berpendapatan tinggi, menyebabkan pengurangan ketidaksamaan pendapatan.

14. Pembundaran anggaran

Pengiraan bagi sesuatu kategori mungkin tidak sentiasa sama antara jadual disebabkan oleh pembundaran secara bebas. Walau bagaimanapun, perbezaan ini adalah tidak ketara.

Peratus yang ditunjukkan dalam jadual adalah diperoleh daripada angka sebenar dan tidak semestinya memberikan jumlah genap 100 peratus disebabkan pembundaran, walaupun jumlah yang ditunjukan adalah 100 peratus.

15. Nota dan Simbol

- 0.0 Kurang daripada setengah unit terkecil yang ditunjukkan. Misalnya, kurang daripada 0.05 peratus
 - Tiada data
- W.P. Wilayah Persekutuan
- RM Ringgit Malaysia

0

TECHNICAL NOTES

TECHNICAL NOTES

1. Introduction

The Household Income/Basic Amenities Survey (HIS/BA) 2009 is the latest income survey carried out by the Department of Statistics, Malaysia after the last survey conducted in 2007. The survey is implemented twice in five years. The publication provides data on income, poverty and basic amenities at national and state levels for citizens only.

2. Objective of survey

2.1 *The main objectives of the survey are as follows:*

- *collect information on income distribution pattern of households;*
- *identify the poverty groups; and*
- *to identify the accessibility of basic amenities by poor households.*

2.2 *Data from the survey are used by the government as inputs for the formulation of national development plan especially in preparing the Tenth Malaysia Plan.*

3. Method of data collection

3.1 *Data collection was carried out using the personal interview approach. Officers and staffs of the Department who were involved in this survey were given special training as interviewers. They visited selected households (HH) to collect information on demography, income and basic amenities using a set of questionnaires.*

3.2 *Field checks were done by experienced officers from the Department of Statistics' State Office to detect and rectify errors or omission of cases which occurred during the survey. In addition, re-interviews of certain selected household were done to ensure the quality of data collected.*

4. Reference period

The reference period for the household income information was for the last twelve months. For example, if the survey month was July 2009, income recorded will be those received from 1st July 2008 until 30th June 2009. The survey period for HIS/BA 2009 differed from that of the previous survey whereby the HIS/BA 2009 started in April 2009 and completed in March 2010 while the HIS/BA 2007 commenced in July 2007 and ended in December 2007.

5. Scope and Coverage

5.1 *The survey covered both urban and rural areas in Malaysia except the Orang Asli Enumeration Block (EBs) in Peninsular Malaysia. Usually the EBs that lie in the interior areas are not included in the sampling frames. However, for the latest survey, the Department expanded its coverage to include these EBs.*

5.2 *The survey covered households staying in private living quarters (LQ). The institutional households, that is, those living in hostels, hotels, hospitals, old folks homes, military and police barracks, prisons, welfare homes and other institutions were excluded from the coverage of the survey.*

5.3 *Detailed information on income was obtained from the household members who are **income recipients**. Based on the “A Provisional Framework for Household Income, Consumption, Saving and Wealth” published by Australian Bureau of Statistics (ABS) and “Final Report and Recommendations of the Expert Group on the Household Income Statistics (The Canberra Group 2001”), the sources of income comprise:*

- (i) *earnings from **paid employment** (including wages and salaries, cash allowances, bonuses, commissions, overtime payments, free food, free or concession lodging, free or concession consumer goods, payment in kinds and employer’s contributions to EPF/SOCSO);*
- (ii) *income from **self-employment** (including value of home-produced goods for own consumption);*
- (iii) ***property income** (including royalties, rents, interests and dividends);*

- (iv) **current transfer receipts** (*including remittances, alimony, scholarships and fellowships, pensions, periodic payments from inheritance or trust funds and gifts in cash or in kind*); and
- (v) **other income** (*including imputed rent of owner-occupied house*).

5.4 Components of the basic amenities covered were education, health, housing and household appliances. However, for the purpose of reporting, only selected information was highlighted to show the level of basic amenities enjoyed by the population, especially the poor households.

- (i) **Education** covers distance of educational institution from the living quarters. For school-going children who were not schooling, main reasons for not attending school were asked;
- (ii) **Health** covers information on distance of government and private health institutions from living quarters;
- (iii) **Housing** covers information on the type of ownership, condition of building, number of bedrooms, types of materials for outside walls, types of toilets used, water supply, electricity supply and garbage collection facilities;
- (iv) **Household appliances** cover questions on household equipments owned by the household for own use such as motorcar, washing machine, telephone and others.

6. Sampling frame

6.1 The frame used for the selection of sample for HIS/BA 2009 was based on the National Household Sampling Frame (NHSF) which was made up of EBs created for the 2000 Population and Housing Census. EBs are geographical contiguous areas of land with identifiable boundaries. On average, each EB contains about 80 to 120 living quarters. Generally, all EBs are formed within gazetted boundaries i.e. within administrative districts, mukim or local authority areas.

- 6.2 *The EBs in the sampling frame are also classified by urban and rural areas. Urban areas are as defined in the 2000 Population and Housing Census. Urban areas are gazetted areas with their adjoining built-up areas which had a combined population of 10,000 or more at the time of the 2000 Population and Housing Census. All other gazetted areas with a population of less than 10,000 persons and non-gazetted areas are classified as rural.*
- 6.3 *Built-up areas are defined as areas contiguous to a gazetted area and have at least 60 per cent of their population (aged 10 years and over) engaged in non-agricultural activities as well as having modern toilet facilities in their housing units.*
- 6.4 *Urbanisation is a dynamic process and keeps changing in line with progress and development. Thus the urban areas for the 1991 and 2000 censuses do not necessarily refer to the same areas, as areas fulfilling the criteria of urban continue to increase or grow over time.*

- 6.5 *The classification of area by stratum is as follows:*

Stratum	Population of gazetted and adjoining built-up areas
(i) Metropolitan	75,000 and above
(ii) Urban large	10,000 to 74,999
(iii) Urban small	1,000 to 9,999
(iv) Rural	All other areas

- 6.6 *For sampling purposes, the above broad classification was found to be adequate for all states and federal territories. However, for Sabah and Sarawak, due to inaccessibility, the rural stratum had to be further stratified based on the time taken to reach the area from the nearest urban centre.*
- 6.7 *For purposes of tabulation by urban and rural, the strata were combined as follows:*

$$\begin{aligned} \text{Urban} &= \text{Metropolitan + Urban large} \\ \text{Rural} &= \text{Urban small + All rural} \end{aligned}$$

7. Sample design

7.1 A two-stage stratified sampling design was adopted and the levels of stratification are as follows:

- i) Primary stratum - made up of states in Malaysia
- ii) Secondary stratum - made up of urban and rural as defined in para 6.5 and formed within primary stratum

7.2 Samples are drawn independently within each level of the secondary stratum. The units for first stage sample selection are the EBs while the second stage units are the LQs within the EBs. All households and persons within the selected LQs are canvassed. At every stage of selection, the units are selected systematically with equal probability within each level of the secondary stratum.

8. Sample size

8.1 The sample size required is based on the relative standard error of the previous survey for each stratum and state. Other factors such as cost and availability of staff are also taken into considerations in determining the sample size.

8.2 The selected sample size is as follows:

Table 1: Distribution of selected EBs, LQs and number of households response by state

State	Number of EBs	Number of LQs	Number of HH Response
Johor	587	4,696	4,182
Kedah	364	2,912	3,222
Kelantan	435	3,480	3,681
Melaka	199	1,592	1,527
Negeri Sembilan	212	1,696	1,531
Pahang	280	2,240	2,072
Perak	457	3,656	3,361
Perlis	155	1,240	1,196
Pulau Pinang	382	3,056	3,286
Selangor	726	5,808	5,865
Terengganu	290	2,320	2,574
W.P. Kuala Lumpur	452	3,616	2,746

<i>W.P. Putrajaya</i>	52	416	365
<i>Peninsular Malaysia</i>	4,591	36,728	35,608
<i>Sabah</i>	748	5,984	5,750
<i>W.P. Labuan</i>	83	664	581
<i>Sarawak</i>	498	3,984	3,866
<i>Malaysia</i>	5,920	47,360	45,805

9. Concepts and definitions

9.1 Living quarters

*Living quarters are defined as independent and separate structures, which are usually used as place of abode. The terms, **separate** and **independent** mean the following:*

Separate

A structure is considered separate if it is surrounded by walls, fence, etc. and is covered by roof.

Independent

A structure is said to be independent if it has direct access via public staircase, communal passageway or landing (that is, occupants can come in or go out of their living quarters without passing through others' premises).

9.2 Household

A household is defined as a person or group of related and/or unrelated persons who usually live together and make common provisions for food and other living essentials.

9.3 Household income

Household income refers to total income accrued to members of a household, both in cash and/or in kinds on a regular basis in one year or more often.

9.4 Income recipient

Income recipient refers to a household member who receives income within the reference period.

9.5 Ethnic group

Ethnic group classification is based on the 2000 Population and Housing Census. The classification is as follows:

<u>Peninsular Malaysia</u>	<u>Sarawak, Sabah & W.P. Labuan</u>
Malaysian Citizen	Malaysian Citizen
Bumiputera	Bumiputera
Chinese	Chinese
Indians	Others
Others	
Non-citizen	Non-citizen

9.6 Poverty

The concept of poverty used is based on the methodology introduced in year 2004 which took into consideration of food PLI and non-food PLI for each household visited. PLI is defined separately for each household in the HIS/BA. Each household's PLI take into consideration the following factors:

(i) The household's size and demographic composition

Larger households require more food and non-food expenditures to achieve a satisfactory standard of living for all its members. As the caloric requirements vary by sex and age, the food PLI also varies in accordance with the demographic composition of the household.

(ii) The household's location: State and stratum (urban/rural)

Food and non-food prices vary significantly across states and between urban and rural areas. For example prices in Kuala Lumpur are usually higher than elsewhere. The new PLI takes into account of these price variations.

9.7 A household in the Household Income Survey is considered poor if its income is less than its PLI. This means that it lacks the resources to meet the basic food and non-food needs of its individual members. A household is considered **hard-core poor if its income is below the food PLI.** PLI for each household is different according to the location (state and stratum), household size and demographic composition.

9.8 The Food PLI

The food component of the PLI is based on the advice of nutritionists, dieticians and medical professionals from the Ministry of Health, Universiti Kebangsaan Malaysia and Universiti Putra Malaysia. The kilo calorie needed by a family of five persons is 8,725 per day. Individuals daily kilo calorie requirements are met through a balanced diet which includes: cereals and cereal products (rice, wheat flour); chicken, eggs and fish; milk; oil and fats; sugar; vegetables and fruits and pulses. The kilo calorie requirements are then converted to monetary value using the retail prices at each locality.

9.9 The Non-Food PLI

The non-food component of the PLI is determined by the spending pattern of low income households in the Household Expenditure Survey.

The non-food items of the PLI are:

- *Clothing and footwear;*
- *Gross rent, fuel and power;*
- *Durables (furniture, furnishings and household equipment and operation);*
- *Transport and communication; and*
- *Other non-food items.*

Tables 2: Poverty Line Income by regions for year 2009

Region	Total	Urban	Rural
<i>(RM) per month</i>			
Peninsular Malaysia	763	771	743
Sabah/W.P. Labuan	1,048	1,022	1,082
Sarawak	912	938	884
Malaysia	800	800	801

9.10 Calculation of Poverty Rates

PLI for each household are differs according to location (state and stratum), household size and demographic composition. The household poverty level was then measured using two formulas as follows:

(i) Poverty Rates

*The calculation involves all households having monthly gross income below **Poverty Line Income**. The calculation of the Incidence of Poverty (IP):*

$$IP = \frac{\text{Number of households with income below the PLI}}{\text{Total number of households}} \times 100$$

(ii) Hard-Core Poverty Rates

*The calculation involves all households having gross monthly income below **Food Poverty Line Income**. The calculation of the Incidence of Hardcore Poverty (IHP):*

$$IHP = \frac{\text{Number of households with income below Food PLI}}{\text{Total number of households}} \times 100$$

10. Reliability of the data

Data obtained from survey or research based on sample selection has a probability of encountering two types of errors. These are sampling and non-sampling errors.

(i) Sampling Error

Sampling error is a result of estimating data based on a probability sampling, not on census. Such error in statistics is termed as relative standard error (RSE) and is given in percentage. This is used as an indicator to the precision of the parameter under study. In other words, it reflects the extent of variation with other sample-based estimates.

For the HIS/BA 2009, the mean monthly gross household income for Malaysia was RM4,025 with an RSE of 0.63 per cent. In other words, the standard error (SE) is approximately RM25. Assuming that the mean household income is normally distributed, the confidence interval for the estimated mean income can be calculated. Based on a 95 per cent confidence level ($\alpha = 0.05$), the mean monthly household income was found to be in the range of RM3,975.75–RM4,074.89 monthly.

(ii) Non-sampling Error

*To ensure high quality data, several steps were taken to keep **non-sampling errors** to a minimum. Unlike sampling errors, these errors cannot be measured and can only be overcome through several administrative procedures. These errors may arise through incomplete survey coverage, weaknesses in the frame, feedback errors, non-response errors and also errors during processing such as editing, coding and data capture.*

Response errors may occur due to difference and difficulty in interpreting questions, be it on the part of the enumerator or respondent. To minimize these errors, intensive training was conducted for the enumerators as well as the supervisors. In addition, random checks were carried out on households that were already canvassed by the enumerators to ensure the validity of the information recorded. To ensure the completeness of the survey coverage, the sampling frame is frequently updated and the

selections of living quarters were done after the completion of EB listing exercise.

Non-response errors occur due to reasons such as vacant house, ‘no one at home’, refusal to cooperate or not qualified for the survey. To overcome such cases, sample size in the survey was estimated after taking into considerations all probabilities uncounted as mentioned earlier. For HIS/BA 2009, the number of household responded by state is as given in Table 1.

The survey frame is updated regularly to overcome the problem of non-response due to vacant home. Publicity was carried out through electronic and printed media to minimize the case of ‘no one at home’ and refusal to cooperate. With regard to editing and processing errors, several consistency checks were introduced, either manually or computer aided, to ensure the generation of quality and acceptable data.

11. The Gini Coefficient

- 11.1 *The Gini coefficient (G) is a measure of income concentration derived from the Lorenz Curve. The curve is obtained by plotting the cumulative per cent of households on the X axis against the cumulative per cent of the aggregate income received by these households on the Y axis. The value of the Gini coefficient ranges from 0 to 1 where 0 denotes complete equality of income share and 1 represents total inequality of income share.*
- 11.2 *The Gini coefficient (G) is the proportion of the area between the diagonal and the Lorenz Curve (A) and the area under the diagonal (A+B) as shown in Figure 1, whereby*

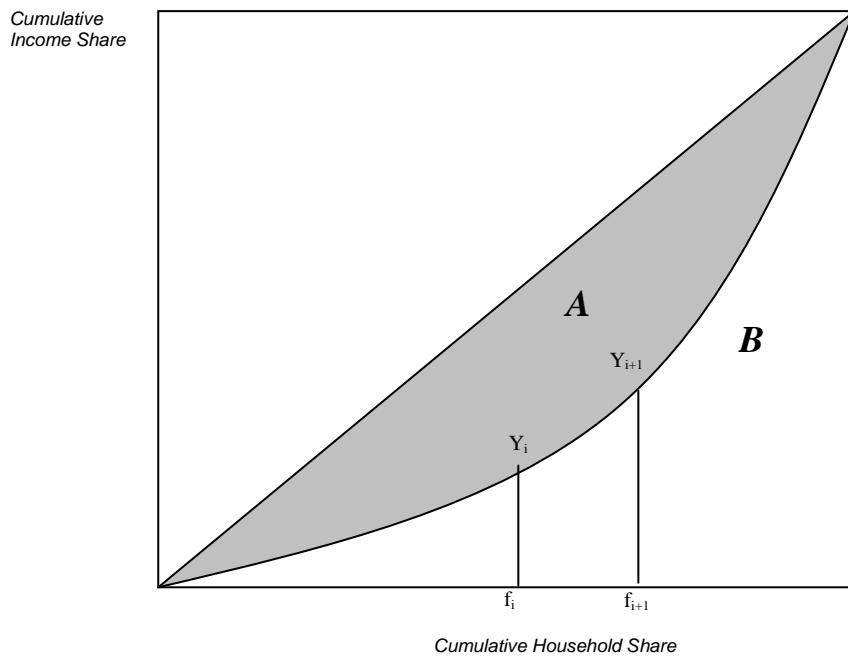

$$G = \frac{A}{A+B} = \frac{\text{Area between curve and diagonal}}{\text{Area under diagonal}}$$

$$= \frac{0.5 - \text{Area under Curve}}{0.5}$$

or mathematically: -

$$G = 1 - \sum_{i=1}^k (f_i - f_{i+1})(Y_i + Y_{i+1})$$

FIGURE 1
Lorenz Curve

12. Average annual growth rate

Calculation of the average annual growth rate based on the geometric function as follows:

$$r = (Y_t|Y_0)^{(1|t)} - 1$$

where;

r average annual growth rate;

Y Mean household income;

t period.

13. Limitations of income measurement

Gross household income has been used for tabulation purposes. The gross household income does not take into account current transfer payment especially income taxes paid by the higher income households. Moreover, the distributive effects of public expenditure were also not reflected in the survey data due to the inherent difficulties to impute such benefits as part of household income. Such public expenditure normally benefit the low income households, the imputation of these benefits will increase their total income. Otherwise the use of net income data after deduction of income taxes will

decrease the total income of the high income households resulting in a lowering of income inequalities.

14. Rounding of estimates

The calculation of certain categories may not always be the same between tables due to independent rounding. However, the differences were insignificant.

Percentages shown in the tables were computed from actual absolute figures and may not always add up exactly to 100 per cent due to rounding, although the totals were shown as 100 per cent.

15. Notes and symbols

0.0 *Less than half the smallest unit shown. For example, less than 0.05 per cent*

- *Nil*

W.P. *Wilayah Persekutuan*

RM *Ringgit Malaysia*
