Table 14: Socio-demographic characteristics – South Africa.....	79
Table 15: Profile of those not in education and not in employment.....	88
Table 16: Involvement in non-market activities and labour market status by province.....	90

Introduction

Stats SA has updated the QLFS results (2008-2013), to reflect the new population benchmarks from Census 2011. The patterns, trends and dynamics in fertility, mortality and migration obtained from the census are the main drivers of the historical revisions. A report with the historical revisions of the QLFS, which includes the weighting methodology, can be downloaded from www.statssa.gov.za. Historical time series data in Excel format are also available for selected variables.

Quarterly data revisions are best undertaken at the end of the year when the annual results become available. Thus it is now feasible to revise the labour market series using the new population estimates.

Prior revisions to the series were as follows:

- After Census 1996.
- After Census 2001.
- After CS 2007 and the launch of the QLFS
- In 2005 and 2010 to reflect new mid-year population estimates.

Figure 1: Employment

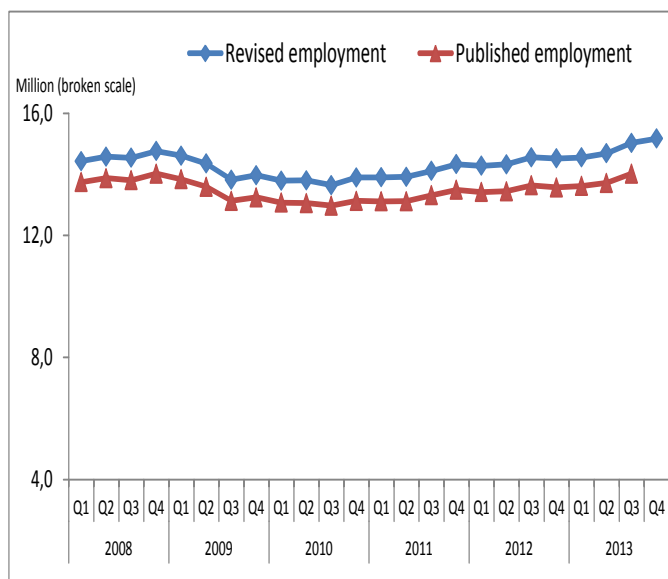

Figure 2: Absorption rate

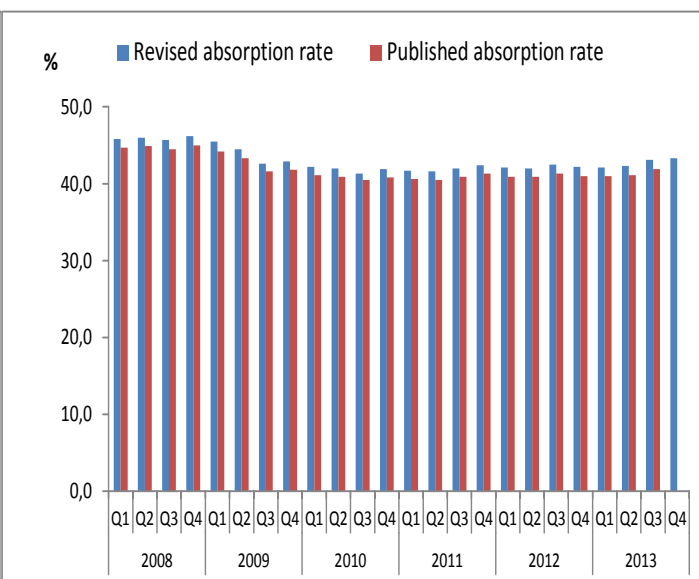

Figure 3: Unemployment

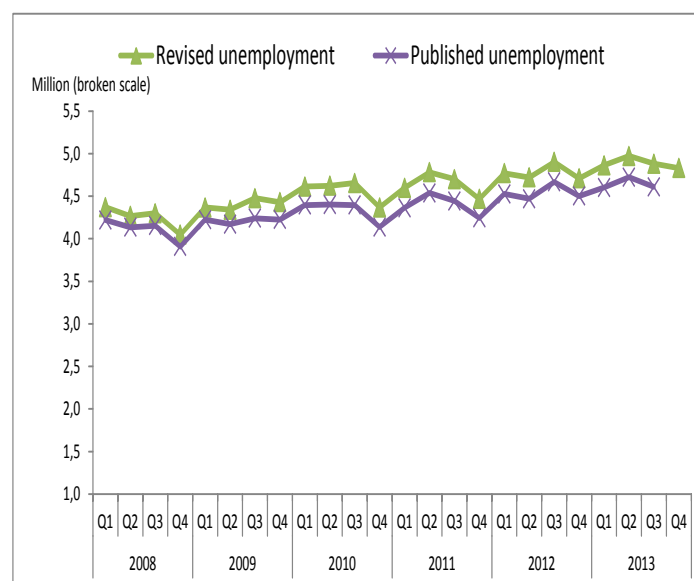

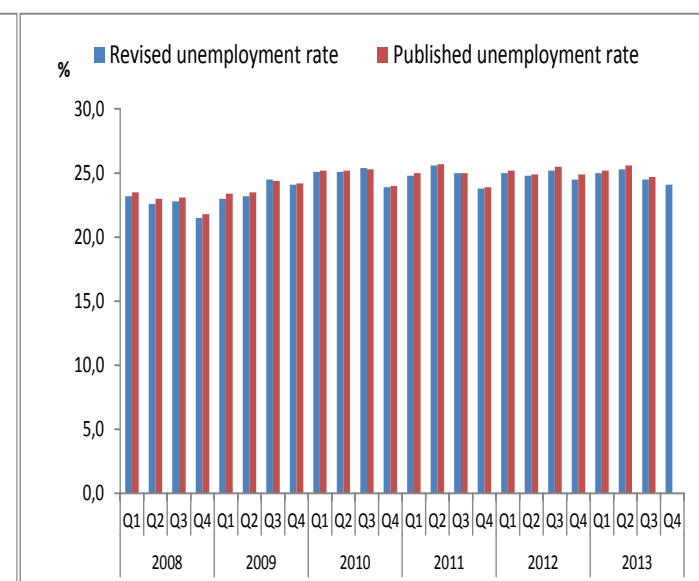

Figure 4: Unemployment rate

Figures 1 to 4 show that the trends in all the revised labour market indicators are similar to those previously published. The revised estimates of the working age population; employment; and unemployment are higher than previously published but this has had little impact on key labour market rates such as the unemployment rate, the labour absorption rate and the labour force participation rate.

A handwritten signature in black ink, appearing to read 'PJ Lehohla', is positioned above a horizontal line.

PJ Lehohla
Statistician-General: Statistics South Africa

Note: Mining is a very clustered industry, hence the industry might not have been adequately captured by the QLFS sample.
 For more robust mining estimates, please use the Quarterly Employment Statistics (QES). *Due to rounding, numbers do not necessarily add up to totals.
 For all values of 10 000 or lower the sample size is too small for reliable estimates

Note: *Mining is a very clustered industry, hence the industry might not have been adequately captured by the QLFS sample. For more robust mining estimates, please use the Quarterly Employment Statistics (QES).

Due to rounding, numbers do not necessarily add up to totals.

For all values of 10 000 or lower the sample size is too small for reliable estimates

Due to rounding, numbers do not necessarily add up to totals.

For all values of 10 000 or lower the sample size is too small for reliable estimates

Due to rounding, numbers do not necessarily add up to totals.

For all values of 10 000 or lower the sample size is too small for reliable estimates

Table 13: Characteristics of the not economically active – South Africa

	Not economically active							Inactivity rate by age (Both sexes)				Inactivity rate by age (Women)				Inactivity rate by age (Men)			
	Total	Student	Home-maker	Illness/disability	Too old/young to work	Discouraged work seekers	Other	15-64 years	15-24 years	25-54 years	55-64 years	15-64 years	15-24 years	25-54 years	55-64 years	15-64 years	15-24 years	25-54 years	55-64 years
