1. Introduction

The Quarterly Labour Force Survey (QLFS) is a household-based sample survey conducted by Statistics South Africa (Stats SA). It collects data on the labour market activities of individuals aged 15 years and above who live in South Africa. However, this report only covers labour market activities of persons aged 15 to 64 years.

This report presents the key findings of the QLFS conducted from July to September 2012 (Q3:2012).

2. Highlights of the results

Table A: Key labour market indicators

	Jul-Sep 2011	Apr-Jun 2012	Jul-Sep 2012	Qtr-to- qtr change	Year-on- year change	Qtr-to- qtr change	Year-on- year change
	Thousand				Per cent

Labour force	17 761	17 916	18 313	397	552	2,2	3,1
Employed	13 318	13 447	13 645	198	327	1,5	2,5
Formal sector (non-agricultural)	9 436	9 571	9 663	92	227	1,0	2,4
Informal sector (non-agricultural)	2 160	2 085	2 197	112	37	5,4	1,7
Agriculture	624	638	661	23	37	3,6	5,9
Private households	1 098	1 153	1 124	-29	26	-2,5	2,4
Unemployed	4 442	4 470	4 667	197	225	4,4	5,1
Not economically active	14 795	14 987	14 705	-282	-90	-1,9	-0,6
Discouraged work-seekers	2 204	2 311	2 170	-141	-34	-6,1	-1,5
Other (not economically active)	12 591	12 675	12 535	-140	-56	-1,1	-0,4
Rates (%)							
Unemployment rate	25,0	24,9	25,5	0,6	0,5		
Employed/population ratio (absorption)	40,9	40,9	41,3	0,4	0,4		
Labour force participation rate	54,6	54,5	55,5	1,0	0,9		

Due to rounding, numbers do not necessarily add up to totals.

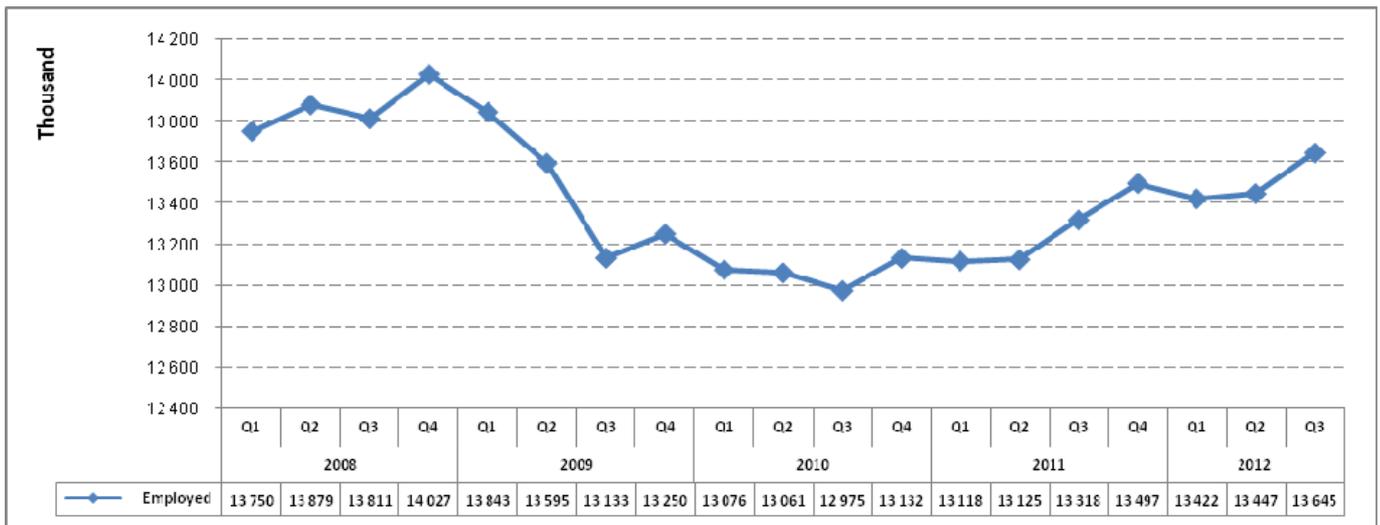

The labour force increased by 397 000 persons between Q2:2012 and Q3:2012. This increase was reflected in an increase in the number of both employed persons (198 000) and unemployed persons (197 000), which saw the unemployment rate increasing by 0,6 of a percentage point from 24,9% to 25,5% in Q3:2012. The Q3:2012 rise in employment translates into an increase of 670 000 in the number of employed persons since Q3:2010, although this level is still 382 000 below the peak in employment of 14 million reached in Q4:2008.

Driving the increase in employment was an increase in all sectors except Private households. Employment in the informal sector increased by 112 000, while formal sector jobs increased by 92 000 and Agriculture by 23 000 in Q3:2012. Employment in private households decreased by 29 000 (2,5 %) in Q3:2012. The number of discouraged work-seekers declined by 141 000 between Q2:2012 and Q3:2012, while other (not economically active) declined by 140 000.

Compared to a year ago, employment increased by 2,5% (327 000), unemployment increased by 5,1% (225 000), the number of discouraged work-seekers decreased by 1,5% (34 000) and other (not economically active) decreased by 0,4% (56 000) in Q3:2012, resulting in a net decrease of 90 000 among the not economically active population.

3. Employment

Figure 1: Total employment, quarter 1:2008 to quarter 3:2012

Since 2008 there has been a rise in employment during the fourth quarter of every year, followed by a decline in the subsequent quarter. Since Q3:2010, employment levels have steadily risen from about 13,0 million to 13,6 million in Q3:2012, increasing on a quarterly basis, with the exception of the first quarter in 2011 and 2012, a trend ascribed to seasonal factors. Between Q2:2012 and Q3:2012 employment increased by 198 000.

Figure 2: Quarter-to-quarter change in employment, quarter 1:2008 to quarter 3:2012

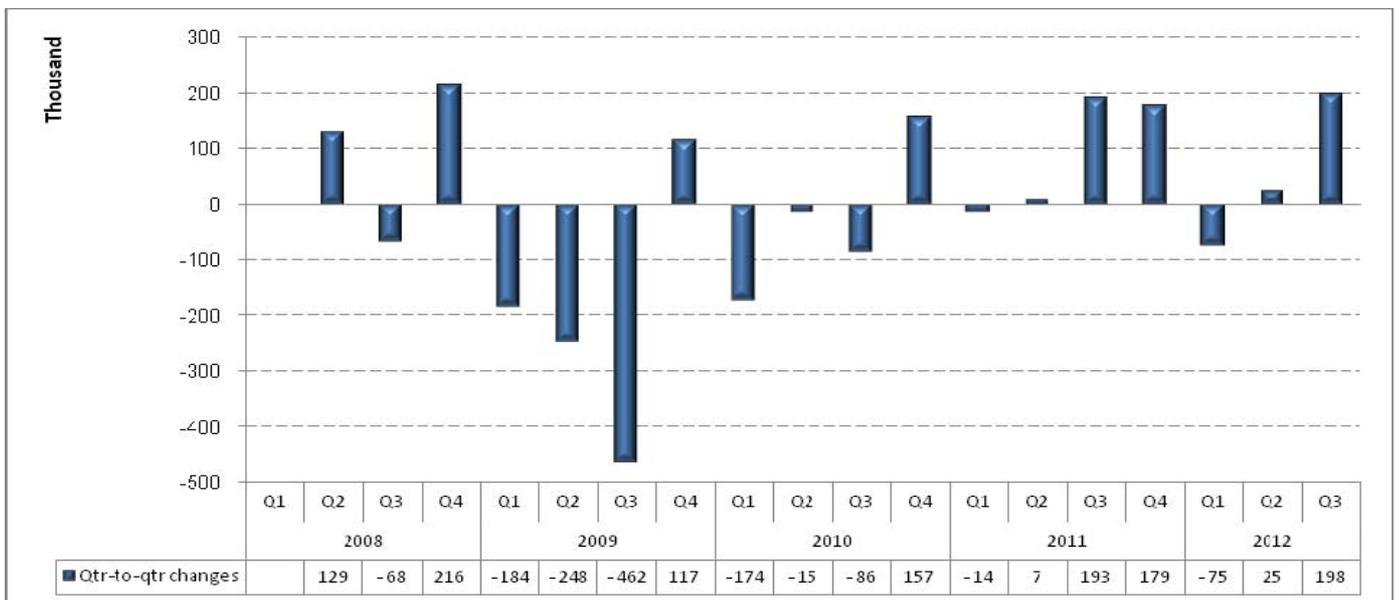

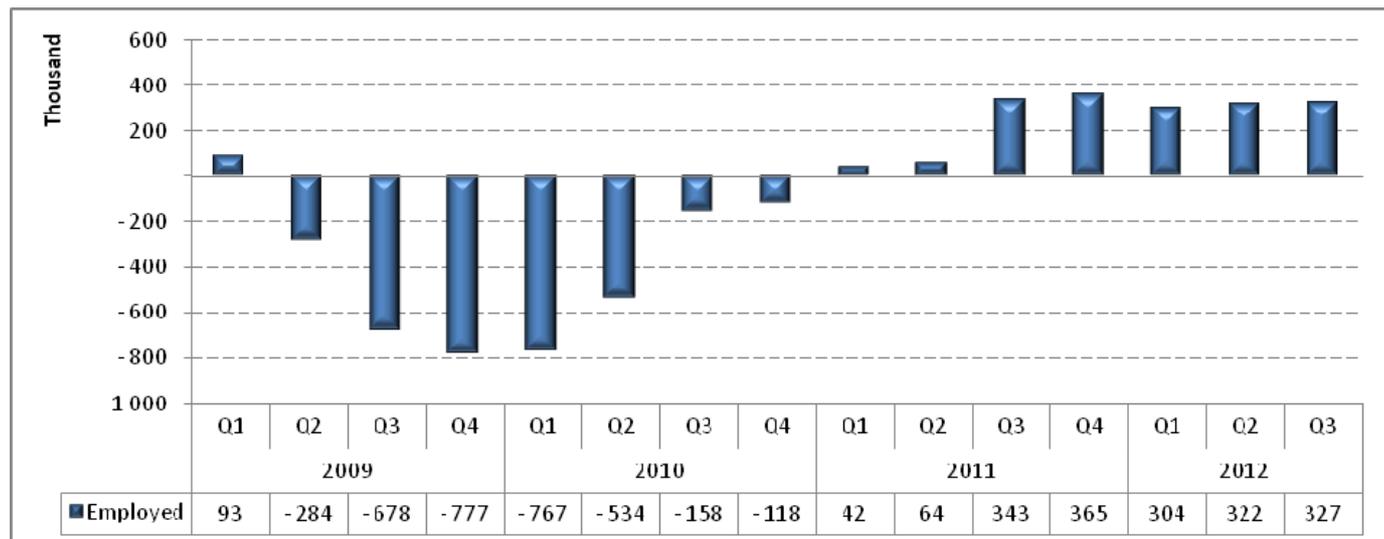

Figure 2 shows that after three successive quarters of increases in employment, employment declined by 75 000 in Q1:2012. Prior to this decline robust quarterly employment gains were realised. In Q2:2012 employment growth was observed, albeit at a slower pace with the number of employed persons increasing by 25 000 on a quarterly basis with employment growth also realised in Q3:2012 (198 000).

Figure 3: Year-on-year change in employment, quarter 1:2009 to quarter 3:2012

South Africa has experienced solid employment growth over the past year, with employment growing by 327 000 (or 2,5%), following growth of 322 000 (or 2,5%) in the year ended June 2012. Employment grew for seven consecutive quarters year-on-year since Q1:2011.

Table B: Employment by industry

Industry	Jul-Sep 2011	Apr-Jun 2012	Jul-Sep 2012	Qtr-to-qtr change	Year-on-year change	Qtr-to-qtr change	Year-on-year change
	Thousand				Per cent		
Total*	13 318	13 447	13 645	198	327	1,5	2,5
Agriculture	624	638	661	23	37	3,6	5,9
Mining [#]	324	357	349	-8	25	-2,2	7,7
Manufacturing	1 737	1 678	1 727	49	-10	2,9	-0,6
Utilities	73	98	105	7	32	7,1	43,8
Construction	1 086	1 012	1 046	34	-40	3,4	-3,7
Trade	3 012	2 966	2 962	-4	-50	-0,1	-1,7
Transport	756	791	834	43	78	5,4	10,3
Finance and other business services	1 768	1 737	1 811	74	43	4,3	2,4
Community and social services	2 836	3 012	3 025	13	189	0,4	6,7
Private households	1 098	1 153	1 124	-29	26	-2,5	2,4

Note: Total includes other industry.

[#]Mining is a very clustered industry, hence the industry might not have been adequately captured by the QLFS sample.

For more robust mining estimates, please use the Quarterly Employment Statistics (QES).

*Due to rounding, numbers do not necessarily add up to totals.

Table B indicates that between Q2:2012 and Q3:2012, the increase in total employment was mainly driven by an increase in the number of employed persons in the Finance and other business services (74 000), Manufacturing (49 000) and Transport (43 000) industries, while employment losses were observed in Private households (29 000), Mining (8 000) and Trade (4 000). Unlike in Q2:2012 when Agriculture experienced job losses, in Q3:2012 job gains (23 000) were observed in this industry. Community and social services reflected employment gains of 13 000 slowing from strong employment gains observed in Q2:2012.

Compared to the same period last year, employment increased by 327 000 jobs in Q3:2012, with Community and social services, Transport and Finance and other business services, contributing 189 000,

78 000 and 43 000 jobs respectively. Job losses were observed in Trade, Construction and Manufacturing industries, as employment declined by 50 000, 40 000 and 10 000 respectively in these industries between Q3:2011 and Q3:2012.

Table C: Employment by province

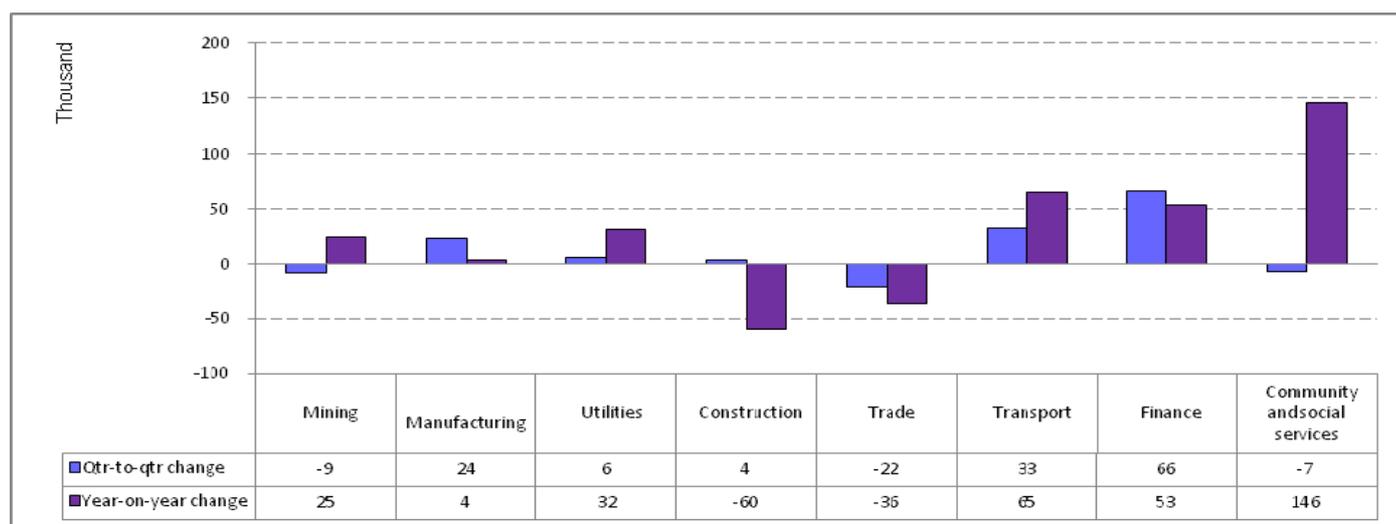

Province	Jul-Sep 2011	Apr-Jun 2012	Jul-Sep 2012	Qtr-to-qtr change	Year-on-year change	Qtr-to-qtr change	Year-on-year change
	Thousand				Per cent		
South Africa	13 318	13 447	13 645	198	327	1,5	2,5
Western Cape	1 806	1 815	1 806	-9	0	-0,5	0,0
Eastern Cape	1 298	1 298	1 330	32	32	2,5	2,5
Northern Cape	278	281	290	9	12	3,2	4,3
Free State	826	728	736	8	-90	1,1	-10,9
KwaZulu-Natal	2 510	2 520	2 533	13	23	0,5	0,9
North West	680	709	745	36	65	5,1	9,6
Gauteng	3 983	4 125	4 194	69	211	1,7	5,3
Mpumalanga	911	953	928	-25	17	-2,6	1,9
Limpopo	1 026	1 018	1 084	66	58	6,5	5,7

*Due to rounding, numbers do not necessarily add up to totals.

Table C shows that between Q2:2012 and Q3:2012, there were employment gains in seven of the nine provinces, with the highest increases observed in Gauteng (69 000), Limpopo (66 000) and North West (36 000). There were job losses in Mpumalanga (25 000) and Western Cape (9 000) over the same period.

For the year ended September 2012, employment increased in seven of the nine provinces, with Gauteng (211 000), North West (65 000) and Limpopo (58 000) being the biggest contributors, while employment declined in Free State (90 000) and remained unchanged in Western Cape.

Figure 4: Changes in the formal sector employment by industry

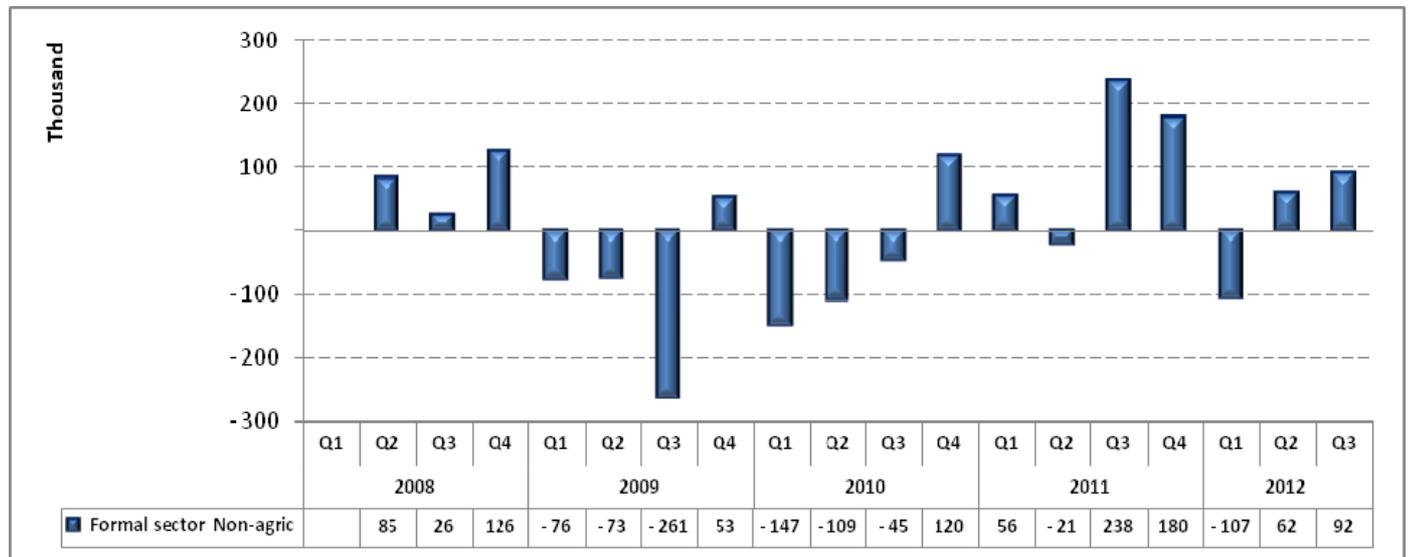

*Mining is a very clustered industry, hence the industry might not have been adequately captured by the QLFS sample. For more robust mining estimates please use the Quarterly Employment Statistics (QES)

In Q3:2012, formal sector employment accounted for 70,8% of total employment, a decrease of 0,4 of a percentage point from the previous quarter, as employment in the sector expanded by 92 000. Between Q2:2012 and Q3:2012 the majority of formal sector job gains were in the Finance and other business services (66 000), Transport (33 000) and Manufacturing (24 000) industries. Job losses were observed in Trade (22 000), Mining (9 000) and Community and social services (7 000) industries over the same period.

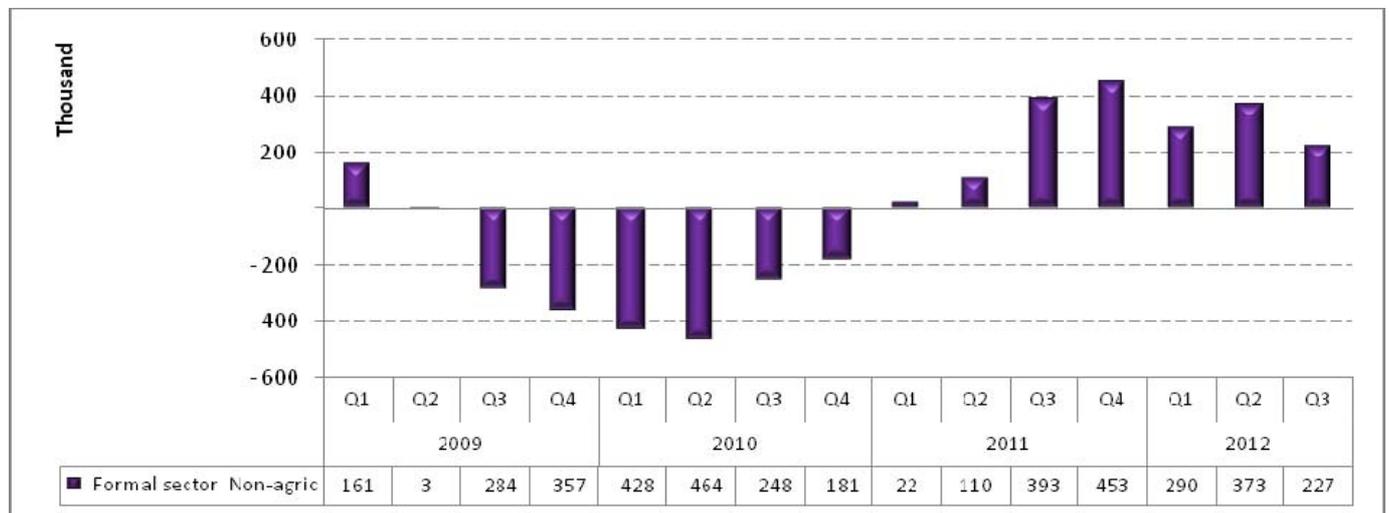

Compared to the same quarter last year, employment gains were mainly observed in Community and social services (146 000), Transport (65 000) and Finance and other business services (53 000) industries.

Figure 5: Quarter-to-quarter changes in the formal sector employment, 2008–2012

Following two consecutive quarters of employment gains, the formal sector shed 107 000 jobs in Q1:2012. The number of employed persons in the formal sector increased by 62 000 in Q2:2012 and continued to increase in Q3:2012 (up by 92 000). The pace of job creation in the sector has slowed down from strong gains observed in the second half of 2011.

Figure 6: Year-on-year changes in the formal sector employment

The annual change in the number of persons employed in the formal sector has been rising since Q1:2011. Compared to Q3:2011, 227 000 more people were employed in the formal sector in Q3:2012.

Figure 7: Changes in the informal sector employment by industry

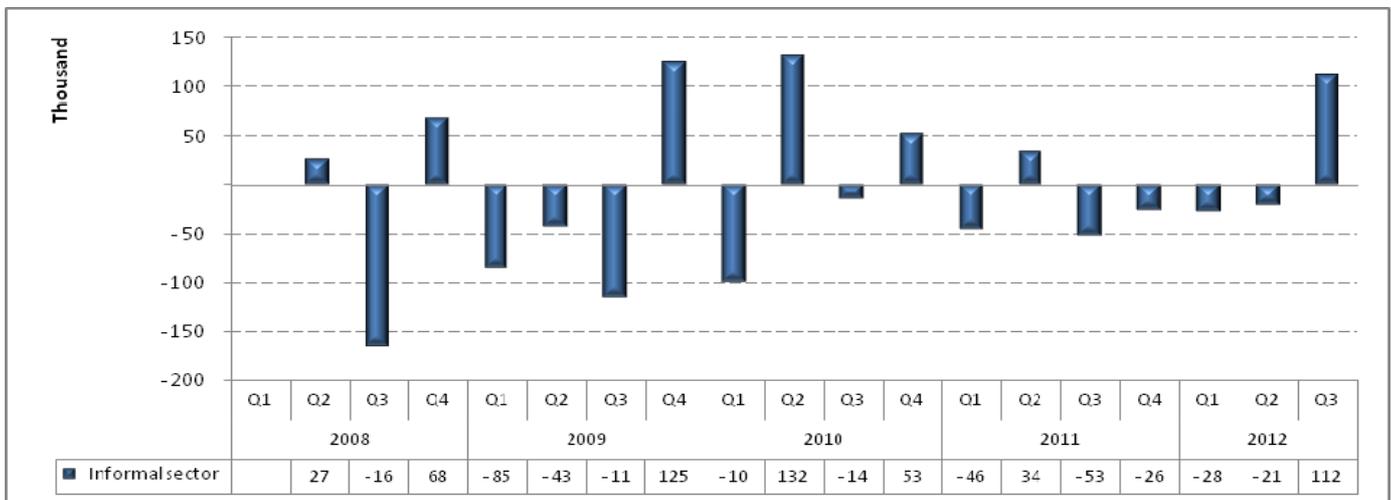

*Mining is a very clustered industry, hence the industry might not have been adequately captured by the QLFS sample. For more robust mining estimates please use the Quarterly Employment Statistics (QES)

Informal sector employment increased by 112 000 jobs between Q2:2012 and Q3:2012. Figure 7 indicates that the majority of jobs in the sector were created in Construction (31 000), Manufacturing (25 000) and Community and social services (20 000).

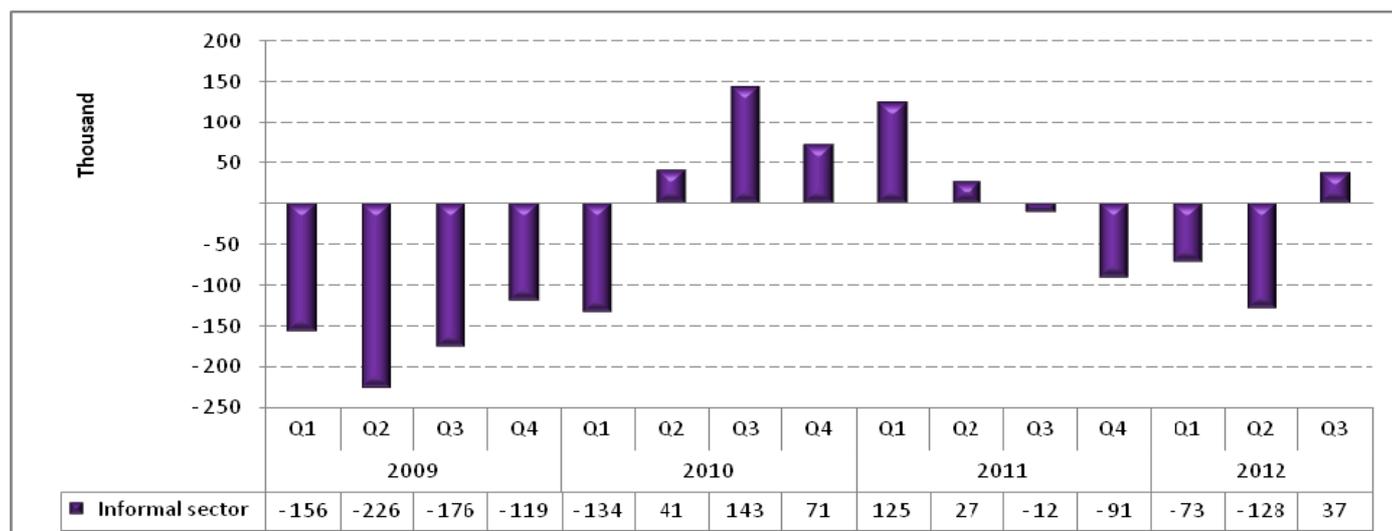

Compared to Q3:2011, the number of persons employed in the informal sector increased by 37 000 in Q3:2012. Job gains were recorded in Community and social services (43 000), Construction (20 000) and Transport (14 000).

Figure 8: Quarter-to-quarter changes in the informal sector employment

Informal sector employment increased by 112 000 jobs between Q2:2012 and Q3:2012 following 4 successive quarterly declines in employment.

Figure 9: Year-on-year changes in the informal sector employment

Following five successive periods of year-on-year growth since Q2:2010, employment in the informal sector contracted for four successive quarters over the period Q3:2011 to Q2:2012. The informal sector created 37 000 jobs in Q3:2012.

Table D: Employment by occupation

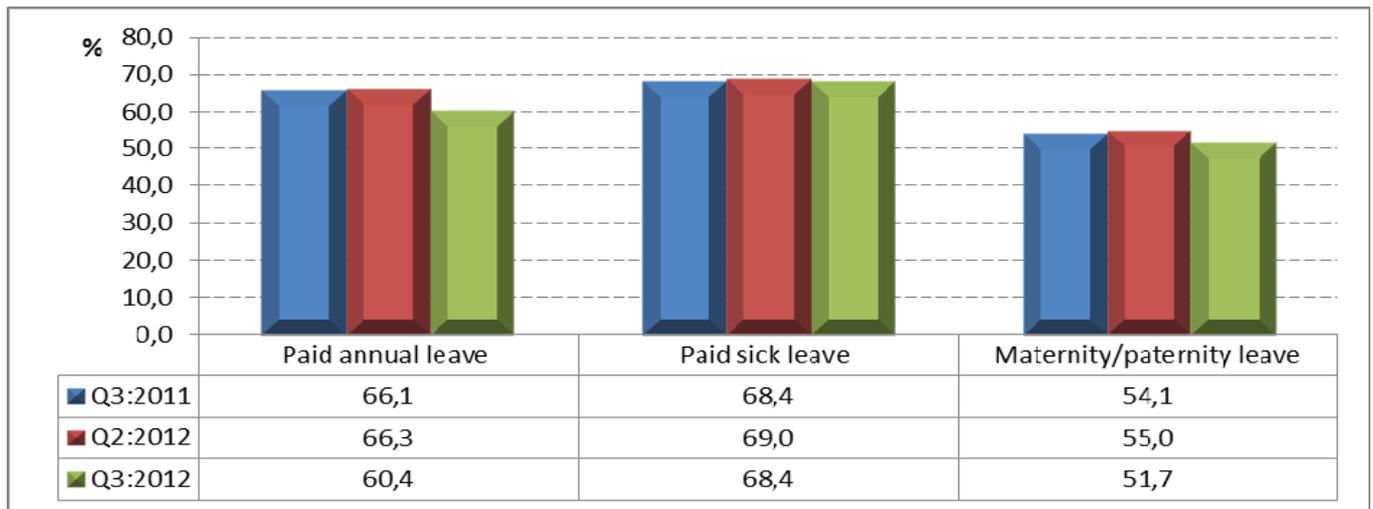

Occupation	Jul-Sep 2011	Apr-Jun 2012	Jul-Sep 2012	Qtr-to-qtr change	Year-on-year change	Qtr-to-qtr change	Year-on-year change
	Thousand				Per cent		
Total	13 318	13 447	13 645	198	327	1,5	2,5
Manager	1 130	1 062	1 135	73	5	6,9	0,4
Professional	763	816	798	-18	35	-2,2	4,6
Technician	1 440	1 577	1 523	-54	83	-3,4	5,8
Clerk	1 426	1 406	1 390	-16	-36	-1,1	-2,5
Sales and services	1 975	1 956	2 062	106	87	5,4	4,4
Skilled agriculture	61	67	67	0	6	0,0	9,8
Craft and related trade	1 655	1 581	1 662	81	7	5,1	0,4
Plant and machine operator	1 097	1 111	1 150	39	53	3,5	4,8
Elementary	2 894	2 957	2 982	25	88	0,8	3,0
Domestic worker	878	913	876	-37	-2	-4,1	-0,2

*Due to rounding, numbers do not necessarily add up to totals.

Elementary occupations account for 21,9% of total employment in Q3:2012. While accounting for the biggest share in total employment, the number of persons employed in Elementary occupations increased by 25 000 in Q3:2012 compared to Q2:2012. The biggest increase in employment was observed in Sales and services (106 000), followed Craft and related trade (81 000) and Managerial (73 000) occupations. In the same period, employment losses were observed in Technician (54 000), Domestic worker (37 000) and Professional (18 000) occupations.

Compared to a year ago, most jobs were created in Elementary (88 000), Sales and services (87 000) and Technician (83 000) occupations. There was a decline in the number of persons employed in Clerical (36 000) occupation.

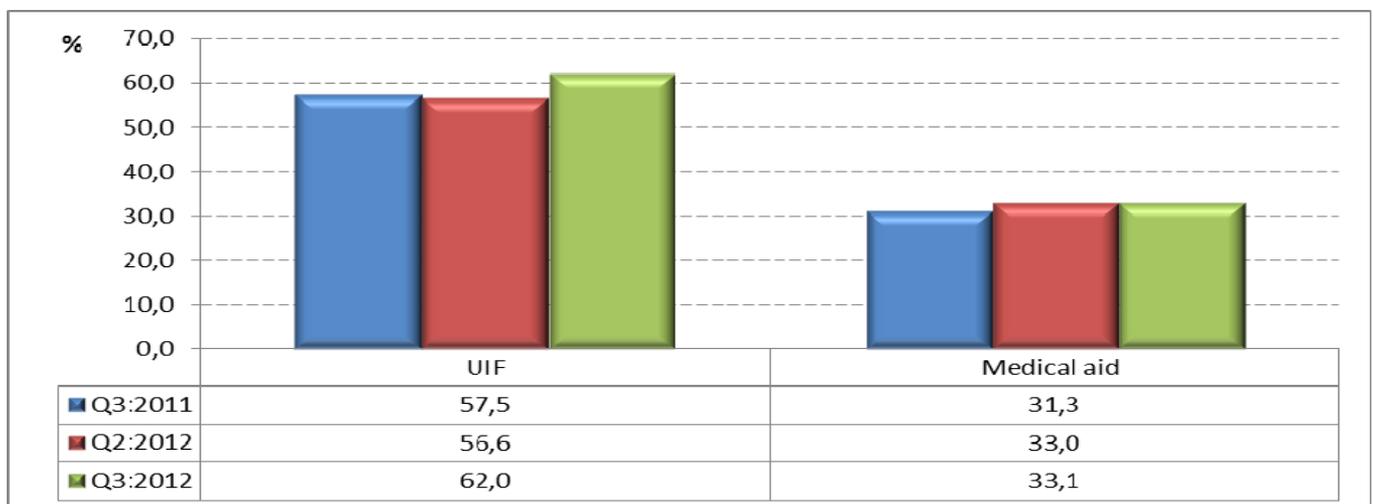

Figure 10: Employee access to selected leave benefits

Between Q2:2012 and Q3:2012, the proportion of employees with access to paid annual leave and paid sick leave declined, while maternity leave benefit increased. Entitlement to paid sick leave benefit was the most available benefit offered by employers, with paid sick leave available to 68,4% of employees in Q3:2012, 0,6 of a percentage point decline from the previous quarter. The proportion of employees with paid annual (vacation) leave declined by 5,9 percentage points from 66,3% in Q2:2012 to 60,4% in Q3:2012; while the maternity/paternity leave benefit declined by 3,3 percentage points.

Compared to the same quarter in 2011, the proportion of employees with paid sick leave benefit remained unchanged at 68,4%. There was a 2,4 percentage points decline in the proportion of employees with maternity/paternity leave and a decrease of 5,7 percentage points for the paid annual leave benefit.

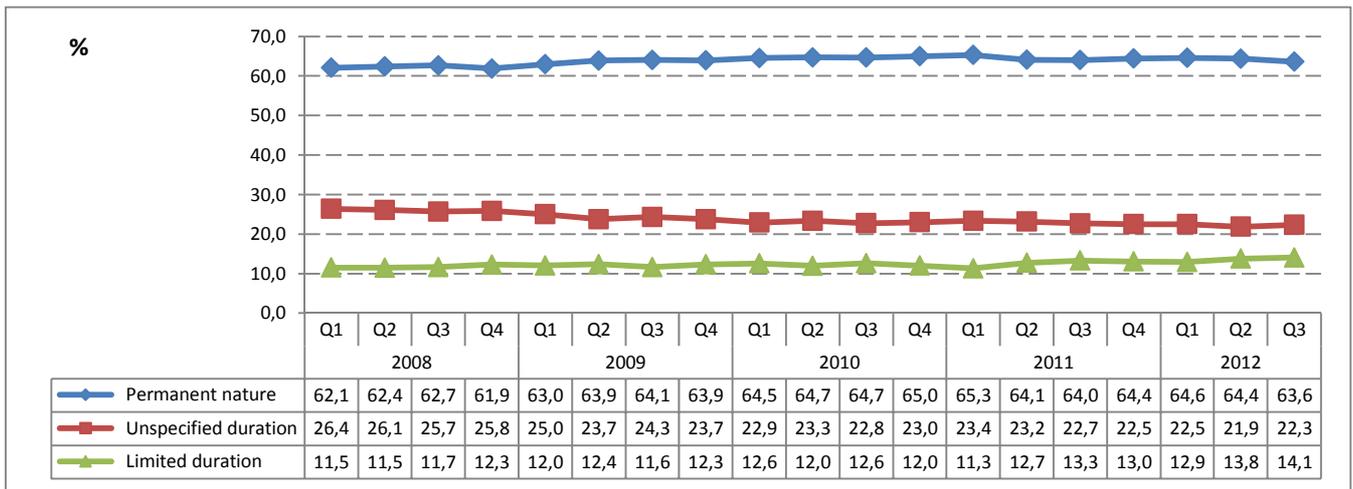

Figure 11: Employee access to other benefits

More than half of the employees indicated that their employers paid Unemployment Insurance Fund (UIF) contributions on their behalf, while about a third of employees were entitled to medical aid benefits from their employers. Between Q2:2012 and Q3:2012, there was an increase of 5,4 percentage points in the proportion of employees for whom their employers paid UIF, while medical aid benefit coverage remained virtually unchanged.

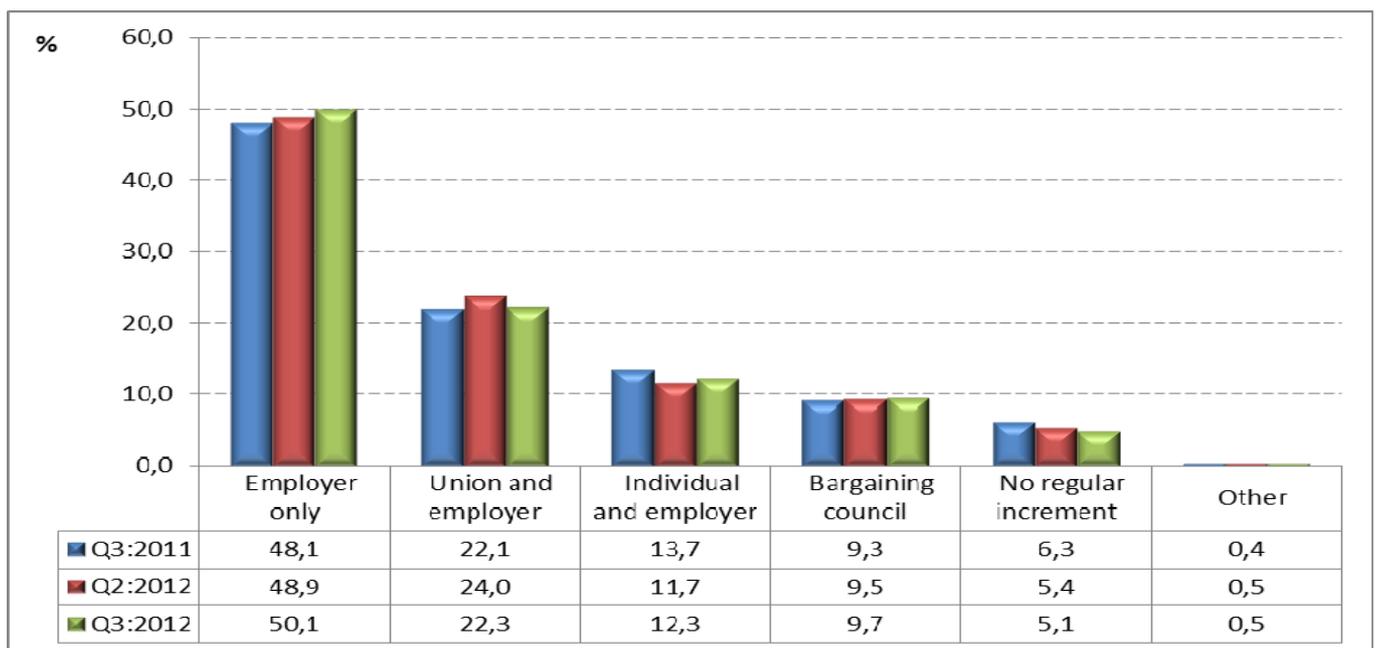

An annual comparison shows an improvement in the proportion of employees whose employers paid UIF benefit for them (up by 4,5 percentage points), while those with medical aid benefit increased by 1,8 percentage points.

Figure 12: Nature of employment contract or agreement , quarter 1:2008 to quarter 3:2012

Since Q1:2008, more than 60,0% of the employees had a permanent employment contract/agreement with their employer, while more than 11,0% had a contract of a limited duration. Between Q1:2008 and Q3:2012, employees with a permanent employment contract/agreement with their employer had increased by 1,5 percentage points, while those with a limited duration contract increased by 2,6 percentage points.

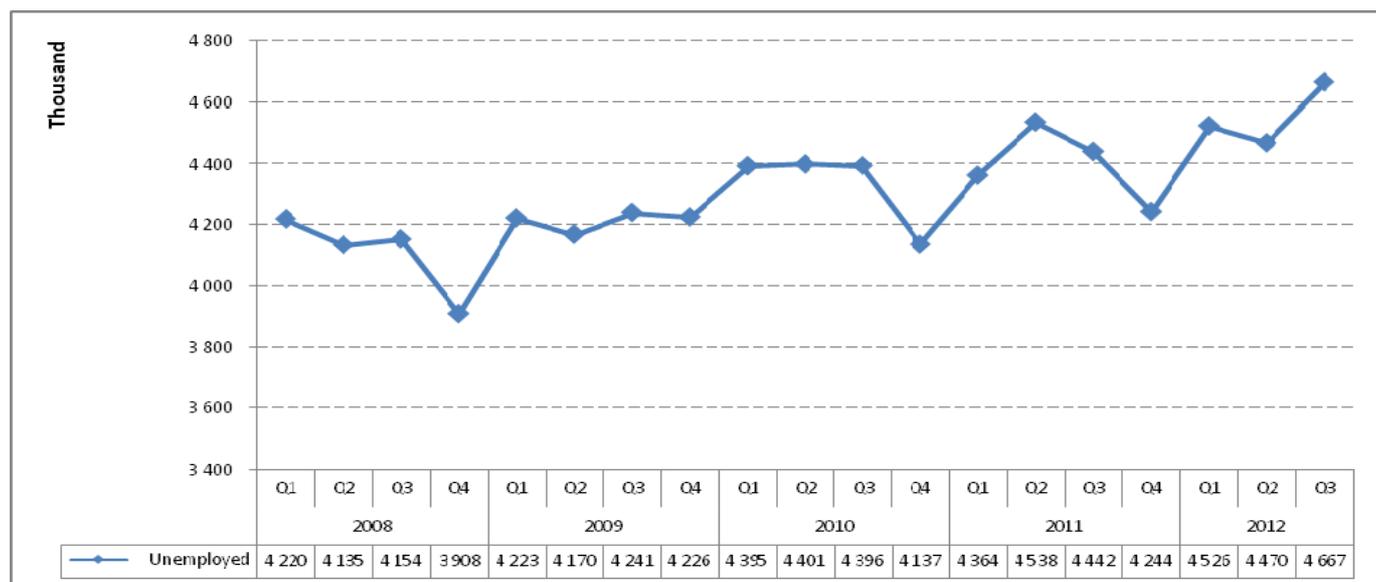

Figure 13: How the employee’s annual salary increment is negotiated

In Q3:2012; 50,1% of employees indicated that their annual salary increases were determined by the employer only, 22,3% by the union and the employer. While 9,7% of the employees reported that their annual salary increase is determined by the bargaining council or other sector bargaining arrangement and 5,1% of employees did not have regular annual increases.

4. The unemployed population

Figure 14: Total unemployment, quarter 1:2008 to quarter 3:2012

In Q4:2008, there were approximately 3,9 million persons unemployed in South Africa. During the financial and economic crisis, the level of unemployment climbed rapidly, reaching a peak of 4,4 million in Q2:2010, and remaining around this level in the following quarter. The number of unemployed persons rose to 4,5 million in Q1:2012, but declined by 56 000 persons between Q1:2012 and Q2:2012, while there was an increase of 197 000 between Q2:2012 and Q3:2012. The number of unemployed persons at 4,6 million in Q3:2012 is the highest level since the QLFS commenced in Q1:2008.

Table E: The unemployed by sex

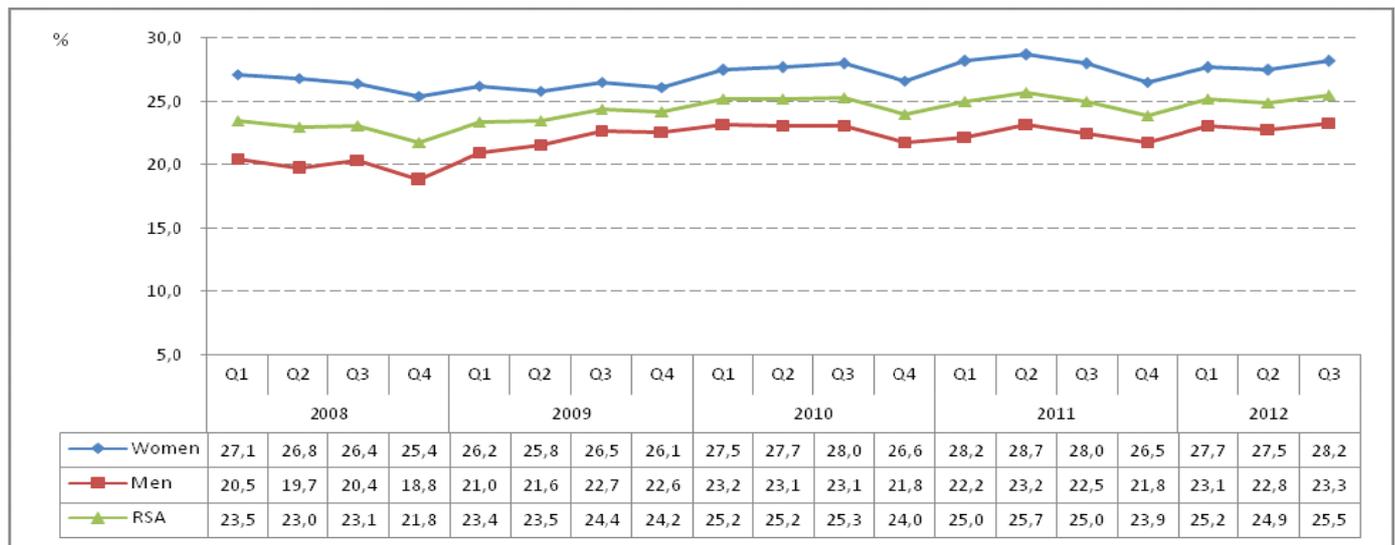

Unemployed	Jul-Sep 2011	Apr-Jun 2012	Jul-Sep 2012	Qtr-to-qtr change	Year-on-year change	Qtr-to-qtr change	Year-on-year change
	Thousand				Per cent		
Total*	4 442	4 470	4 667	197	225	4,4	5,1
Women	2 257	2 227	2 331	104	74	4,7	3,3
Men	2 186	2 243	2 336	93	150	4,1	6,9

*Due to rounding, numbers do not necessarily add up to totals.

The number of unemployed persons increased by 197 000 (or 4,4%) between Q2:2012 and Q3:2012. This increase reflected a rise in both the number of unemployed women (104 000) and unemployed men (93 000). This increase had led an equalisation in the number of men and women who were unemployed in Q3:2012.

Year-on-year, the number of unemployed women increased by 74 000 (or 3,3%), while the number of unemployed men increased by 150 000 (or 6,9%).

Figure 15: Unemployment rate by sex

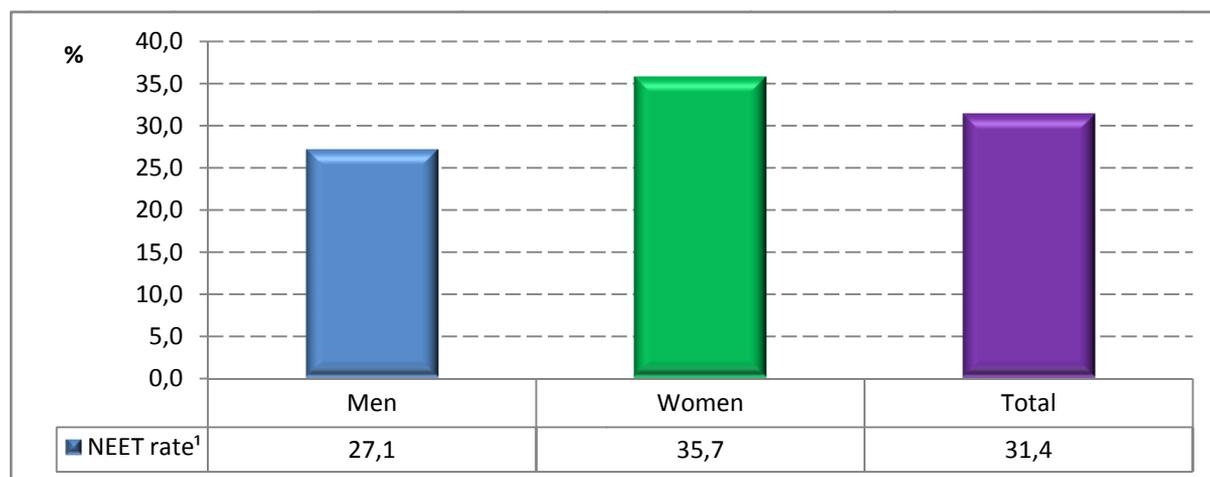

The unemployment rate for women was 27,1% in Q1:2008, while the rate for men was 6,6 percentage points lower, and by Q1:2012 this gap had narrowed to 4,6 percentage points. Unemployment rate for women remained higher than the national average between Q1:2008 and Q2:2012. In Q3:2012 the unemployment rate for women was 2,7 percentage points higher than the national average. Q3:2012 saw an increase in the unemployment rate for both men and women compared to Q2:2012.

People who are not in employment, education or training (NEET)

Recently there has been increasing interest in the challenges faced by young people in the labour market. This interest resulted in a demand for more information on the dynamics of the youth not in employment, education or training (NEET). Consequently Stats SA decided to include questions in the QLFS questionnaire to enable the identification of the NEETs. Statistics on NEETs has been included in this report for the first time.

Approximately a third of the youth aged 15–24 years were not in employment, education or training in Q3:2012, which indicates the vulnerability of this group. The youth who are categorised as NEET are considered to be disengaged from both work and education. In Q3:2012, around 3,2 million youth were NEETs.

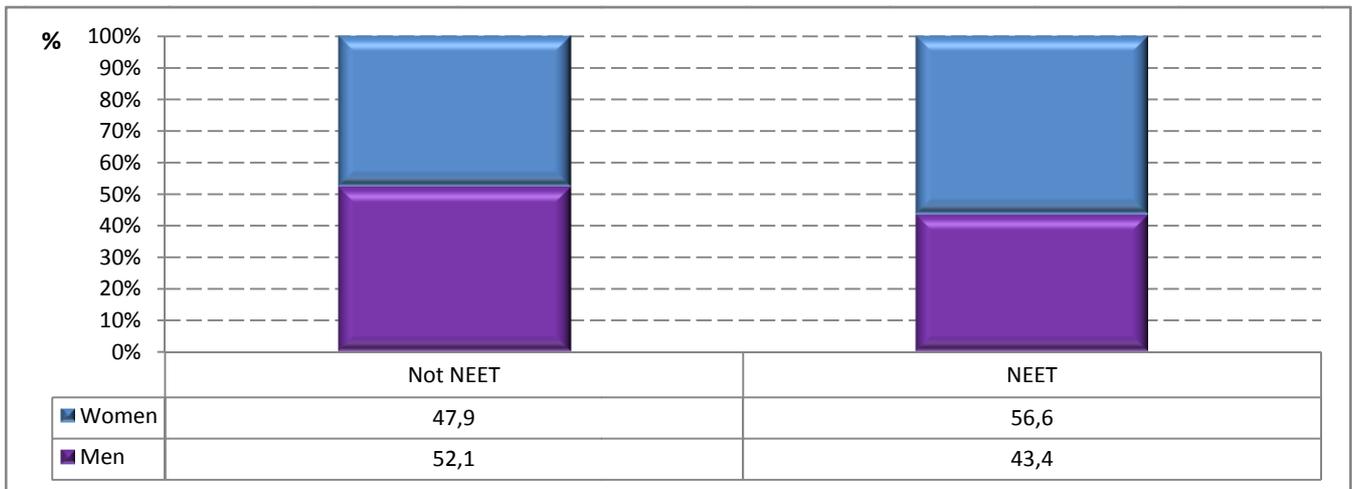

Figure 16: NEET rate of youth aged 15–24 years by sex

¹Note: NEET rate= (Number of unemployed youth +number of youth not in the labour force)-(number of unemployed youth and youth not in the labour force who are in education or training)/ Total number of youth

Figure 16 illustrates that, among the youth (15–24 years), NEET rate was higher among women (35,7%), than among men (27,1%).

Figure 17: Share of 15–24 year olds who are not in employment, education or training by sex

Women account for a bigger share of those aged 15–24 year who are NEET, - 56,6% were women (and 43,4% were men (Figure 17).

Figure 18: Share of the unemployed by education level

In general, lower unemployment rates are associated with higher levels of education. In Q1:2008, 64,1% of the unemployed did not have matric, while only 5,2% of the unemployed had tertiary qualifications. In Q3:2012, 61,0% of the unemployed did not have matric and only 5,9% had tertiary qualifications. The rise in unemployment has been driven by an increase in unemployment for those with educational levels lower than matric.

Figure 19: Unemployment rate by province

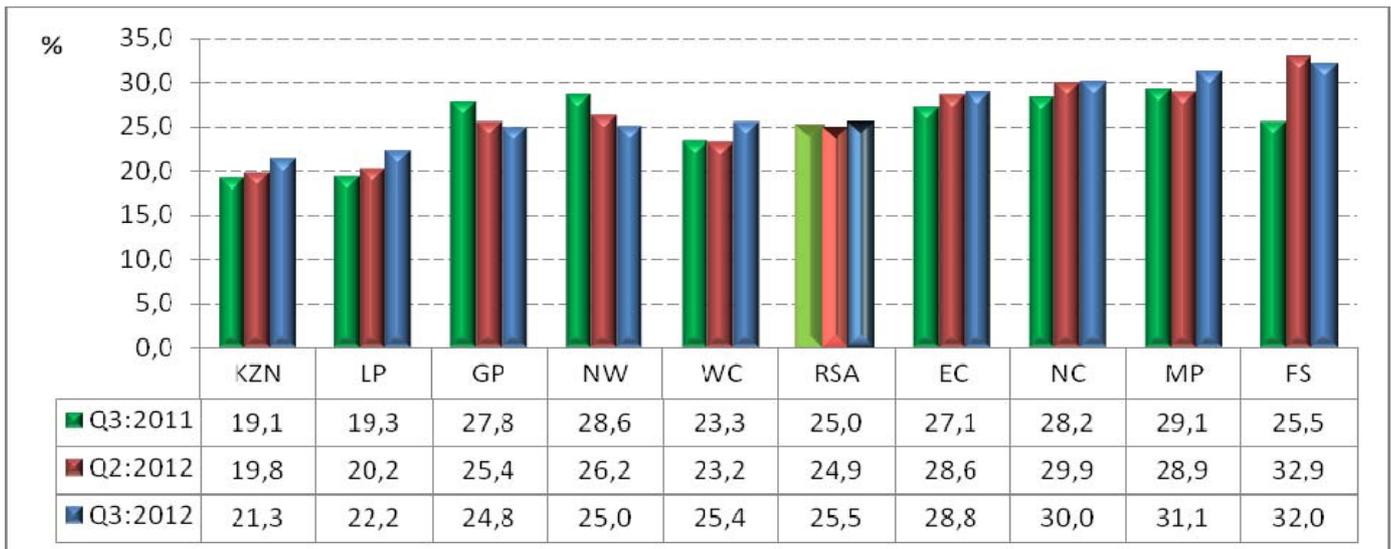

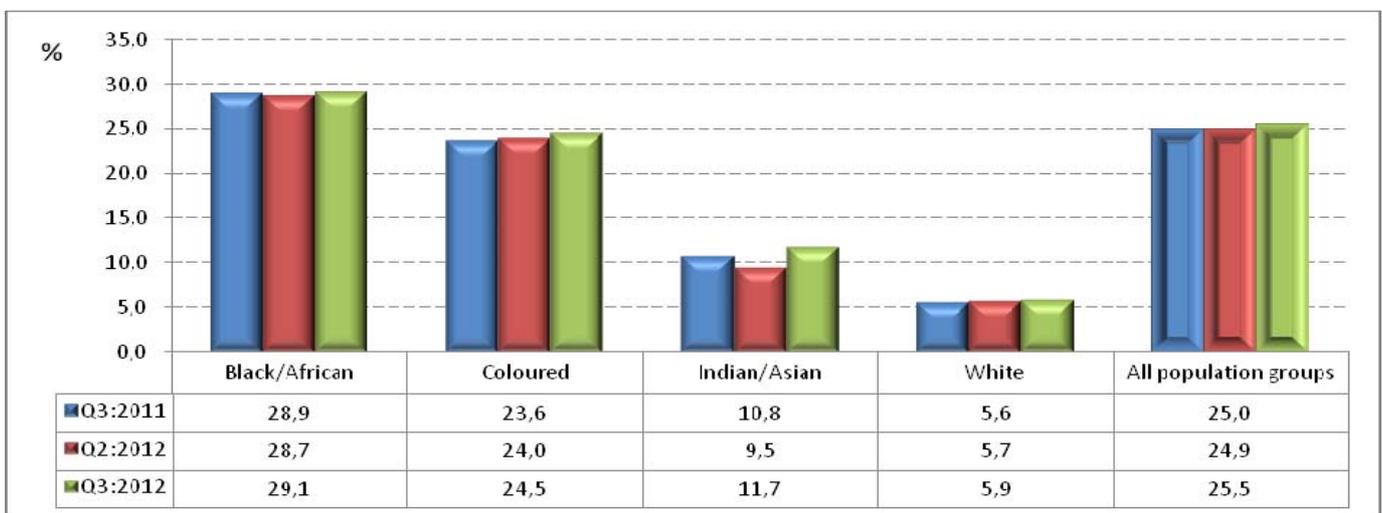

Figure 19 shows an increase in the unemployment rate in six of the nine provinces in Q3:2012 compared to Q2:2012. The biggest increase in the unemployment rate was observed in Mpumalanga (2,2 percentage points), Western Cape (2,2 percentage points) and Limpopo (2,0 percentage points). The highest decrease in unemployment rate was recorded in North West (1,2 percentage points).

In comparison to the same period last year, the unemployment rate increased by 0,5 of a percentage point at the national level. The biggest increases in the unemployment rate were observed in Free State (6,5 percentage points), Limpopo (2,9 percentage points) and KwaZulu-Natal (2,2 percentage points). The biggest decreases in unemployment rate were observed in North West (3,6 percentage points) and Gauteng (3,0 percentage points) in the same period.

Figure 20: Unemployment rate by population group

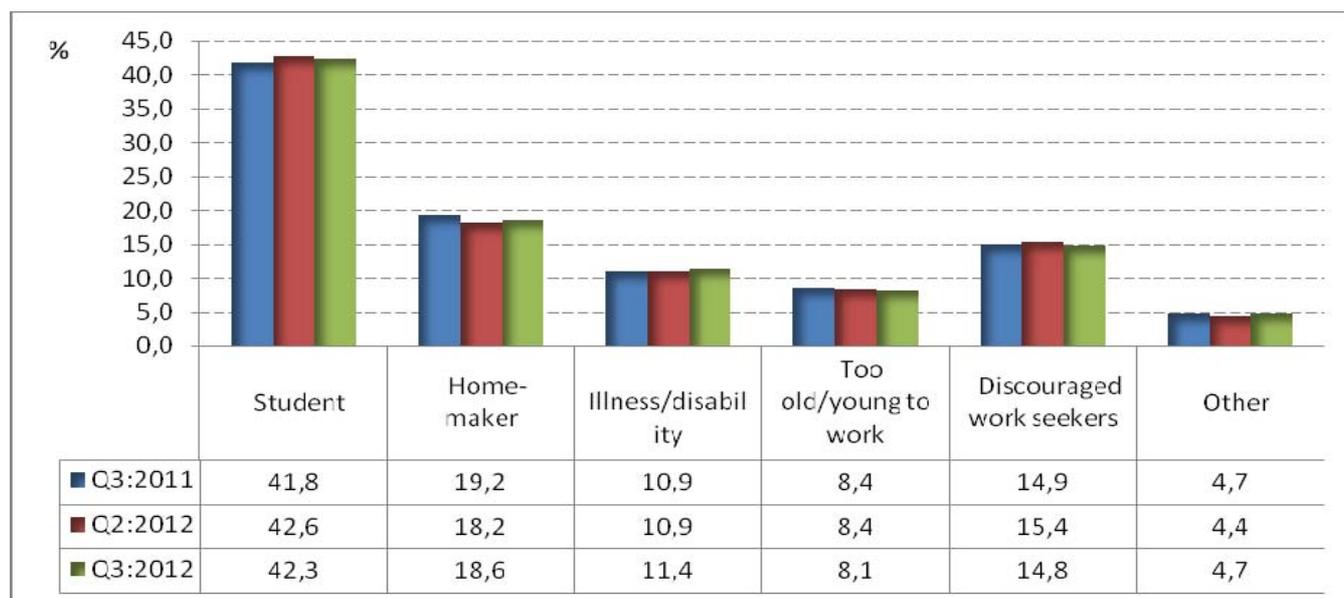

Between Q2:2012 and Q3:2012, the unemployment rate increased among all population groups, with the biggest increase observed among the Indian/Asian population (up by 2,2 percentage points).

The year-on-year comparisons also show an increase in the unemployment rate among all population groups.

5. Characteristics of the not economically active population

Figure 21: The not economically active population

In Q3:2012, students (42,3%) accounted for the largest share of the not economically active population, followed by home-makers (18,6%), while discouraged work-seekers accounted for 14,8% of the not economically active (0,6 of a percentage point lower than in the previous quarter).

Compared to a year ago (Q3:2011), the share of students among the not economically active population increased by 0,5 of a percentage point; while the share of discouraged work-seekers remained virtually unchanged.

PJ Lehohla
Statistician-General: Statistics South Africa

6. Technical notes

6.1. Response details

Table F: Response rates by province

Province	Jul-Sep 2012
	Per cent
Western Cape	90,8
Eastern Cape	98,6
Northern Cape	91,3
Free State	96,9
KwaZulu-Natal	97,5
North West	92,8
Gauteng	80,5
Mpumalanga	94,2
Limpopo	98,4
South Africa	92,7

6.2. Survey requirements and design

The Quarterly Labour Force Survey (QLFS) frame has been developed as a general-purpose household survey frame that can be used by all other household surveys irrespective of the sample size requirement of the survey. The sample size for the QLFS is roughly 30 000 dwellings per quarter.

The sample is based on information collected during the 2001 Population Census conducted by Stats SA. In preparation for the 2001 Census, the country was divided into 80 787 enumeration areas (EAs). Stats SA's household-based surveys use a master sample of primary sampling units (PSUs) which comprise EAs that are drawn from across the country.

The sample is designed to be representative at provincial level and within provinces at metro/non-metro level. Within the metros, the sample is further distributed by geography type. The four geography types are: urban formal, urban informal, farms and tribal. This implies, for example, that within a metropolitan area the sample is representative at the different geography types that may exist within that metro.

The current sample size is 3 080 PSUs. It is divided equally into four subgroups or panels called rotation groups. The rotation groups are designed in such a way that each of these groups has the same distribution pattern as that which is observed in the whole sample. They are numbered from one to four and these numbers also correspond to the quarters of the year in which the sample will be rotated for the particular group.

The sample for the redesigned Labour Force Survey (i.e. the QLFS) is based on a stratified two-stage design with probability proportional to size (PPS) sampling of PSUs in the first stage, and sampling of dwelling units (DUs) with systematic sampling in the second stage.

6.3. Sample rotation

Each quarter, a ¼ of the sampled dwellings rotate out of the sample and are replaced by new dwellings from the same PSU or the next PSU on the list. Thus, sampled dwellings will remain in the sample for four consecutive quarters. It should be noted that the sampling unit is the dwelling, and the unit of observation is the household. Therefore, if a household moves out of a dwelling after being in the sample for, say two quarters, and a new household moves in, the new household will be enumerated for the next two quarters. If no household moves into the sampled dwelling, the dwelling will be classified as vacant (unoccupied).

6.4. Weighting

The sampling weights for the data collected from the sampled households are constructed in such a manner that the responses could be properly expanded to represent the entire civilian population of South Africa. The weights are the result of calculations involving several factors, including original selection probabilities, adjustment for non-response, and benchmarking to known population estimates from the Demographic division of Stats SA.

6.5. Non-response adjustment

In general, imputation is used for item non-response (i.e. blanks within the questionnaire) and edits failure (i.e. invalid or inconsistent responses). The eligible households in the sampled dwellings can be divided into two response categories: respondents and non-respondents; and weight adjustment is applied to account for the non-respondent households (e.g. refusal, no contact, etc.).

6.6. Final survey weights

The final survey weights are constructed using regression estimation to calibrate to the known population counts at the national level population estimates (which are supplied by the Demography division) cross-classified by 5-year age groups, gender and race, and provincial population estimates by broad age groups. The 5-year age groups are: 0–4, 5–9, 10–14, etc., and 65 years and above. The provincial level age groups are: 0–14, 15–34, 35–64, and 65 years and over. The calibrated weights are constructed such that all persons in a household would have the same final weight.

6.7. Estimation

The final survey weights are used to obtain the estimates for various domains of interest, e.g. number of persons employed in agriculture in Western Cape, number of females employed in manufacturing, etc.

6.8. Reliability of the survey estimates

Since estimates are based on sample data, they differ from figures that would have been obtained from complete enumeration of the population using the same instrument. Results are subject to both sampling and non-sampling errors. Non-sampling errors include biases from inaccurate reporting, processing, and tabulation, etc., as well as errors from non-response and incomplete reporting. These types of errors cannot be measured readily. However, to some extent, non-sampling errors can be minimised through the procedures used for data collection, editing, quality control, and non-response adjustment. The variances of the survey estimates are used to measure sampling errors. The variance estimation methodology is discussed below.

(i) Variance estimation

The most commonly used methods for estimating variances of survey estimates from complex surveys such as the QLFS, are the Taylor-series Linearization, Jackknife Replication, Balanced Repeated Replication (BRR), and Bootstrap methods (Wolter, 2007)¹. The Fay's BRR method has been used for variance estimation in the QLFS because of its simplicity.

(ii) Coefficient of variation

It is more useful in many situations to assess the size of the standard error relative to the magnitude of the characteristic being measured (the standard error is defined as the square root of the variance). The **coefficient of variation** ($_{cv}$) provides such a measure. It is the **ratio of the standard error of the survey estimate to the value of the estimate itself expressed as a percentage**. It is very useful in comparing the precision of several different survey estimates, where their sizes or scale differ from one another.

(iii) P-value of an estimate of change

The p-value corresponding to an estimate of change is the probability of observing a value larger than the particular observed value under the hypothesis that there is no real change. If p-value < 0,01, the difference is highly significant; if p-value is between 0,01 and 0,05, the difference is significant; and if p-value > 0,05, the difference is not significant.

¹Wolter KM, 2007. *Introduction to Variance Estimation, 2nd Edition*, New York: Springer-Verlag.

7. Definitions

Discouraged work-seeker is a person who was not employed during the reference period, wanted to work, was available to work/start a business but did not take active steps to find work during the last four weeks, provided that the main reason given for not seeking work was any of the following: no jobs available in the area; unable to find work requiring his/her skills; lost hope of finding any kind of work.

Economic activities are those that contribute to the production of goods and services in the country. There are two types of economic activities, namely: (1) Market production activities (work done for others and usually associated with pay or profit); and (2) Non-market production activities (work done for the benefit of the household, e.g. subsistence farming).

Employed persons are those aged 15–64 years who, during the reference week: did any work for at least one hour; or had a job or business but were not at work (temporarily absent).

Employment-to-population ratio (labour absorption rate) is the proportion of the working-age population that is employed.

Informal employment identifies persons who are in precarious employment situations irrespective of whether or not the entity for which they work is in the formal or informal sector. Persons in informal employment therefore consist of all persons in the informal sector; employees in the formal sector; and persons working in private households who are not entitled to basic benefits such as pension or medical aid contributions from their employer, and who do not have a written contract of employment.

Informal sector: The informal sector has the following two components:

- i) Employees working in establishments that employ less than five employees, who do not deduct income tax from their salaries/wages; and
- ii) Employers, own-account workers and persons helping unpaid in their household business who are not registered for either income tax or value-added tax.

The **labour force** comprises all persons who are employed plus all persons who are unemployed.

Labour force participation rate is the proportion of the working-age population that is either employed or unemployed.

Long-term unemployment: Persons in long-term unemployment are those individuals among the unemployed who were without work and trying to find a job or start a business for one year or more.

Not economically active: Persons aged 15–64 years who are neither employed nor unemployed in the reference week.

Persons in **underemployment (time-related)** are employed persons who were willing and available to work additional hours, whose total number of hours actually worked during the reference period was below 35 hours per week.

Underutilised labour comprises three groups as follows: persons who are underemployed, persons who are unemployed, and persons who are discouraged.

Unemployed persons according to the **official definition** are those (aged 15–64 years) who:

- a) Were not employed in the reference week **and**;
- b) Actively looked for work or tried to start a business in the four weeks preceding the survey interview **and**;
- c) Were available for work, i.e. would have been able to start work or a business in the reference week **or**;
- d) Had not actively looked for work in the past four weeks but had a job or business to start at a definite date in the future and were available.

Unemployed persons according to the **expanded definition** are those (aged 15–64 years) who:

- a) Were not employed in the reference week **and**;
- b) Were available for work, i.e. would have been able to start work or a business in the reference week.

The job search criterion is relaxed.

Unemployment rate is the proportion of the labour force that is unemployed.

The **working-age population** comprises all persons aged 15–64 years
