

FOREWORD

The Labour force statistics are pivotal for manpower planning, human resource development and, economic growth. Federal Bureau of Statistics has been conducting Labour Force Surveys (LFS) since 1963. The Survey data is extensively used by the government, researchers and other stakeholders at large. This report presents annual estimates of the LFS 2009-10.

Detailed information on labour force characteristics has been collected from representative sample of 36,201 households to produce gender disaggregated national and provincial level estimates with urban/rural breakdown. The Survey also provides for quarterly representative results at national, rural/urban level. For this purpose, total sample size is evenly distributed into four sub samples, each to be enumerated in a given quarter.

The Survey, along with the quantification of core variables, also estimates important associated attributes of literacy, migration, occupational safety, etc. in accordance with Pakistan Standard Classification of Occupation (PSCO) 1994 revised in the light of International Standard Classification of Occupation (ISCO) 1988.

Effort has been made to make this report a comprehensive, informative and useful document for decision-makers, researchers, planners, economists and other beneficiaries at large. The report is based on the methodology reviewed with the technical assistance of ILO Mission of Oct 2006. The suggestions are, however, welcome for its further improvement.

SUMMARY OF FINDINGS

The Labour Force Survey provides data on (a) age, sex, marital status, literacy, level of education and migration of the population, (b) dimensions of country's labour force, viz (i) employed labour force classified by, industry, formal & informal sectors, occupation, employment status, hours worked and level of education, (ii) occupational safety and health information of the employed persons, and (iii) unemployed labour by level of education and previous experience. **In comparison with the LFS 2008-09, some of the main findings of LFS 2009-10 are outlined as under:**

1. Literacy and Employment

1(a) **Literacy rate** (57.7%) fares marginally higher than that of LFS 2008-09 (57.4%), more in the case of females and, in rural areas. However, rural-urban and male-female disparity seems to be closing a bit.

1(b) **Participation rate** (33.0%) suggests fractional improvement as compared to that of LFS 2008-09 (32.8%). However, improvement is more of rural than urban and female than male provenance.

1(c) **Employment by Major Industries** indicates increase in the share of *manufacturing* (13.2%) while *wholesale & retail trade* (16.3%) sheds some fractions as compared to the respective estimate of LFS 2008-09 (13.0%, 16.5%). All other industry divisions level same during the comparative periods.

1(d) **Employment Status** shows marginal changes-increase in the comparative profiles of own *account workers* and *employers* while decrease in the case of *employees* and *unpaid family workers*. Gender disaggregated figures indicate mixed trend.

1(e) **Unemployment Rate** (5.6%) is fractionally higher than that of the previous survey (5.5%). The change is visible in the case of females while males unemployment rates remain equivalent. Area wise unemployment rates gather steam equivalently.

1(f) **Formal Sector** employment remains same (26.7%) during the comparative periods. However, marginal changes decrease in the proportions of females and increase in the case of urban areas is observed.

2. Informal Sector

2(a) **Informal Sector** accounts for more than seven-tenth (73%) of the employment in main jobs outside agriculture, more in rural (76%) than in urban areas (71%). Formal and informal composition of the comparative surveys remains equivalent during the period.

2(b) **Employment by Major Industry Divisions** is mainly comprised of *wholesale and retail trade* (39.2%), *manufacturing* (21.4%), *construction* (15.8%), *community, social and personal services* (10.8%), and *transport* (10.8%). Comparative Labour Force Surveys indicate a mixed trend during the period.

2 (c) **Employment Status** constitutes *employees* (44%), *own account workers* (42%), *unpaid family workers* (11%) and *employers* (2.5%). Marginal changes—increase in the comparative profiles of *own account workers* and *employers* while decrease in the case of *employees* and *unpaid family workers*—are observed.

3. Occupational Safety & Health

3(a) **Percentage of Employed** reporting some sort of occupational injury/disease in the past twelve months that resulted in the loss of working time or doctor's consultation are about one in thirty three (2.9%). Male workers are more vulnerable (3.5%) relative to female workers (0.9%). Same is the case for rural workers (3.4%) compared to urban workers (1.8%). The profile of vulnerability during the comparative periods seems to be trending up for males and, more in rural than urban areas.

3(b) **Major Industry Division** puts sufferers mainly in the activities of *agriculture* (50.2%), *construction* (14.3%), *manufacturing* (12.8%), *wholesale & retail trade* (10.6%) and *transport/storage & communication* (8.0%). Comparative risk profiles of *agriculture*, *manufacturing* and *construction* improve while those of *community/ social & personal services* and *whole sale & retail trade* deteriorate. Remaining activities level same during the comparative periods.

3(c) **Major Occupational Grouping** finds the largest group of the sufferers (43.5%) in *skilled agriculture & fishery activities*. Comparative figures of the two surveys indicate improvement, for males only, though more than four-fifths (83.9%) of female sufferers belong to this group. The next major groupings are *elementary occupations* (22.3%) and *craft & related trades worker* (18.9%). Risk profile of the former is increasing more for males while the latter's decreasing, more for females. As for the masculine groups of *plant/machine operators & assemblers* and *legislators/senior officials & managers*, the former indicates lesser, while the latter, more vulnerability.

3(d) **Employment Status** finds majority of sufferers (79.2%) either *own account workers* (41.6%) or *employees* (37.6%). In comparison with the respective estimates of the LFS 2008-09 (38.8%, 38.3%), the former group gets a bit riskier for both genders while the latter betokens improvement more for females. *Unpaid family workers* (20.2%) also indicate improvement, even for both genders. *Employers* allude to a sort of deterioration in their risk profile.

SECTION-I

METHODOLOGY

Introduction

Federal Bureau of Statistics has been carrying out Labour Force Survey (LFS) since 1963. Along the way, the questionnaire and methodology of the survey have been undergoing pertinent improvements to keep current with best practices. The questionnaire was revised in 1990 to include probing questions on marginal economic activities, likely to be carried out mostly by women and tend to go unrecorded with conventional questions. The questionnaire was further improved in 1995 to reckon with the size and composition of migration and informal sector. The scope of the survey was extended in 2001-02 to take the stock of occupational safety and health of employed persons. The questionnaire was further articulated for undertaking 1st quarterly LFS 2005-06. This practice has since been continuing. The surveys conducted so far are given at Annexure-I.

2. This report presents annual results of LFS 2009-10. The survey's sample size comprises 36,400 households divvied up into four distinct, nationally representative samples, each enumerated in a given quarter.

Objectives

3. The major aim of the survey is to collect a set of comprehensive statistics on the various dimensions of country's civilian labour force as a means to pave the way for skill development, planning, employment generation, assessing the role and importance of the informal sector and, sizing up the volume, characteristics and contours of employment. The broad objectives of the survey are as follows:

- To collect data on the socio-demographic characteristics of the total population i.e. age, sex, marital status, level of education, current enrolment and migration etc;
- To acquire current information on the dimensions of national labour force; i.e. number of persons employed, unemployed, and underemployed or out of labour market;
- To gather descriptive facts on the engagement in major occupational trades and the nature of work undertaken by the institutions/organizations;
- To profile statistics on employment status of the individuals, i.e. whether they are employers, own account workers, unpaid family workers or paid employees (regular/casual);
- To classify non-agricultural enterprises employing household member(s) as formal and informal;
- To quantify the hours worked at main/subsidiary occupations;
- To provide data on wages and mode of payment for paid employees;
- To make an assessment of occupational health and safety of employed persons by causes, type of treatment, conditions that caused the accident/injury and time of recovery; and

- To collect data on the characteristics of unemployed persons i.e. age, sex, level of education, previous experience if any, occupation, industry, employment status related to previous job, waiting time invested in the quest for work, their availability for work and expectations for future employment.

Reference Period

4. Reference period is week i.e. seven days before the date of enumeration.

Field Operation

5. FBS is the national statistical organization responsible for collection, processing, compilation and dissemination of statistics. It has 34 Regional/Field Offices located all over Pakistan. These offices are equipped and manned with regular and trained field staff for the collection of data from the field.

6. In order to evolve dynamics of field enumeration in line with the survey's objectives, training is imparted to the concerned staff on interviewing techniques and other procedure to be used in the enumeration. For quality control, supervisors from Regional/Field Offices and headquarter, make frequent field visits to keep the collection process on track.

Data Processing and Editing

7. Soon after data collection, the supervisors edit, check and clean the filled-in questionnaires manually for consistency and completeness and refer back to field where necessary.

8. Editing and coding is done at headquarter by the subject matter section. Computer edit checks are applied to get even with errors identified at the stage of data entry. The relevant numerical techniques are used to eliminate erroneous data resulting from mistakes made during coding. The survey records are further edited and rectified through a series of computer processing stages.

Sampling Plan

9. **Universe:** The universe for Labour Force Survey consists of all urban and rural areas of the four provinces of Pakistan defined as such by 1998 Population Census excluding FATA and military restricted areas. The population of excluded areas constitutes about 2% of the total population.

10. **Sample Design:** A stratified two-stage sample design is adopted for the survey.

11. **Sampling Frame:** Federal Bureau of Statistics (FBS) has developed its own sampling frame for urban areas. Each city/town is divided into enumeration blocks. Each enumeration block is comprised of 200 to 250 households on the average with well-defined boundaries and maps. The list of enumeration blocks as updated through Economic Census 2003 and the list of villages/mouzas/dehs of 1998 Population Census are taken as sampling frames. Enumeration blocks & villages are considered as Primary Sampling Units (PSUs) for urban and rural domains respectively.

Stratification Plan

12. **Urban Domain:** Large cities Karachi, Lahore, Gujranwala, Faisalabad, Rawalpindi, Multan, Sialkot, Sargodha, Bahawalpur, Hyderabad, Sukkur, Peshawar, Quetta and Islamabad are considered as large cities. Each of these cities constitutes a separate stratum, further sub-stratified according to low, middle and high income groups based on the information collected in respect of each enumeration block at the time of demarcation/ updating of urban area sampling frame.

13. **Remaining Urban Areas:** In all the four provinces after excluding the population of large cities from the population of an administrative division, the remaining urban population is grouped together to form a stratum.

14. **Rural Domain:** Each administrative district in the Punjab, Sindh and Khyber Pakhtunkhwa (KP) is considered an independent stratum whereas in Balochistan, each administrative division constitutes a stratum.

15. **Selection of primary sampling units (PSUs):** Enumeration blocks in urban domain and mouzas/dehs/villages in rural are taken as Primary Sampling Units (PSUs). In the urban domain, sample PSUs from each ultimate stratum/sub-stratum are selected with probability proportional to size (PPS) method of sampling scheme. In urban domain, the number of households in an enumeration block as updated through Economic Census 2003 and village population of 1998 Census for rural domain is considered as measure of size.

16. **Selection of secondary sampling units (SSUs):** The listed households of sample PSUs are taken as Secondary Sampling Units (SSUs). A specified number of households i.e. 12 from each urban sample PSU, 16 from rural sample PSU are selected with equal probability using systematic sampling technique with a random start.

17. **Sample Size and Its Allocation:** A sample of 36400 households is considered appropriate to provide reliable estimates of key labour force characteristics at National/Provincial level. The entire sample of households (SSUs) is drawn from 2576 Primary Sampling Units (PSUs) out of which 1204 are urban and 1372 are rural. The overall sample has been distributed evenly over four quarters independently. As urban population is more heterogeneous therefore, a higher proportion of sample size is allocated to urban domain. To produce reliable estimates, a higher proportion of sample is assigned to Khyber Pk and Balochistan in consideration to their smallness. After fixing the sample size at provincial level, further distribution of sample PSUs to different strata in rural and urban domains in each province is made proportionately. The distribution of sample PSUs and SSUs in the urban and rural domain of the four provinces is as under: -

SAMPLE SIZE AND ITS ALLOCATION

(Nos.)

Province/ Area	Sample Enumeration Blocks/Villages (PSUs)			Sample Households (SSUs)		
	Urban	Rural	Total	Urban	Rural	Total
Punjab	524	612	1136	6288	9792	16080
Sindh	344	320	664	4128	5120	9248
Khyber Pk	176	256	432	2112	4096	6208
Balochistan	160	184	344	1920	2944	4864
Pakistan	1204	1372	2576	14448	21952	36400

Reliability of Estimate

18. Notwithstanding complete observance of the requisite codes to ensure reliability of data, co-efficient of variations, computed in the backdrop of 5% margin of error exercised for determining sample size, are also given below to affirm the reliability of estimates.

COEFFICIENT OF VARIATION (CVs) OF IMPORTANT VARIABLES

Characteristics/ Variables	Coefficient of Variation (Cvs) in Percentage						
	Pakistan	Rural	Urban	Provinces			
				Punjab	Sindh	Khyber Pk	Balochistan
Total Persons	0.58	0.53	0.68	0.75	1.20	1.26	1.44

Sex Ratio	0.39	0.53	0.58	0.58	0.69	0.94	1.10

Method of Data Collection

19. Data are collected by direct interview method. Generally, the head of household is chosen to provide information about all members of the household. In case of his non-availability at the time of interview, some other informed member of the household down the line is interviewed. The total sample for the year is evenly distributed for enumeration on quarterly basis to offset the effect of seasonal variations. The information collected however relates to the week preceding the date of enumeration.

Coverage

20. The survey covers all urban and rural areas of the four provinces of Pakistan defined as such by 1998 Population Census, excluding Federally Administered Tribal Areas (FATA) and military restricted areas. The population of excluded areas constitutes about 2% of the total population.

21. All sample enumeration blocks in urban areas and mouzas/dehs/villages in rural areas were enumerated except four sample areas (PSUs), due to law & order and flood situation. However, the number of sample households enumerated (36201) is nigh equivalent (99.5% of the total sample size) to the estimated sample size (36400).

SECTION-II

CONCEPTS AND DEFINITIONS

A brief explanation of the key concepts and definitions follows.

1. ***Sex Ratio*** is the average number of males per 100 females.
2. ***Literacy rate*** expresses all those persons ten years of age and above who could read and write in any language with understanding, as percentage of the population ten years and above.
3. ***Level of education*** is categorized as follows:
 - i) ***Below Matric*** comprises less than ten (10) years of schooling.
 - ii) ***Matric but less than intermediate*** encompasses ten (10) to eleven (11) years of education.
 - iii) ***Intermediate but less than Degree*** entails twelve (12) to thirteen (13) years of education.
 - iv) ***Degree & above*** comprises fourteen (14) or more years of education.
4. ***Household*** constitutes all those persons who usually live together and share their meals. A household may consist of one person or more who may or may not be related to each other.
5. ***Migration*** means the population's movement from one administrative district to another administrative district at any time of their lives and excludes the ones moved within the current district.
6. ***Economically Active Population*** comprises all persons of either sex who provide labour services for the production of goods and services as defined by the United Nation System of National Accounts, during the reference period. The production of goods and services includes:
 - i) all production and processing of primary products whether for the market, barter or, own consumption,
 - ii) the production of all other goods and services for the market,
 - iii) the households which produce such goods and services for the market and own consumption, and
 - iv) own account construction.

7. **Currently Active Population** or labour force comprises all persons ten years of age and above who fulfill the requirements for including among employed or unemployed during the reference period i.e. one week preceding the date of interview.
8. **Crude activity rate** is the currently active population expressed as a percentage of the total population in Pakistan.
9. **Refined activity rate** is the currently active population expressed as a percentage of the population 10 years and above. This rate enables international comparison by factoring in the effect of age composition.
10. **Augmented activity rate** is based on probing questions from the persons not included in the conventional measure of labour force, to net-in marginal economic activities viz subsistence agriculture, own construction of one's dwelling etc. Conventionally, persons 10+ aged reporting housekeeping and other related activities are considered out of labour force. However, from the perspective of time use, they are identified as employed if they have spent time on a specific set of marginal economic activities mentioned afore.
11. **Employment** comprises all persons ten years of age and above who worked at least one hour during the reference period and were either "paid employed" or "self employed". Persons employed on permanent/regular footings have not worked for any reason during the reference period are also treated as employed, regardless of the duration of the absence or whether workers continued to receive a salary during the absence. The survey obtains information on the duration of absence as well as on other formal job attachment characteristics of workers in paid and self employment. In line with augmented participation rates, a loose upper bound of employment can be drawn up by including the persons engaged in marginal economic activities.
12. **Occupation** refers to the type of work done during the reference period by the persons employed (or the kind of work done previously if unemployed), irrespective of the industry or the status in employment of the person. It provides description of a person's job. Occupation is classified according to the Pakistan Standard Classification of Occupations based on the International Standard Classification of Occupations, ISCO-88.
13. **Industry** means the activity of the firm, office establishment or department in which a person is employed or the kind of business, which he/she operates. The activity is defined in terms of the kind of goods produced or services supplied by the unit in which the person works. Industry is classified according to Pakistan Standard Industrial Classification (PSIC) 2007.
14. **Self-employment job** is a job where the remuneration is directly dependent upon the profits, or the potential profits, derived from the goods and services produced.
15. **Status in Employment** refers to the type of explicit or implicit contract of employment of the person with other persons or organization. Status of an economically active individual

with respect to his employment i.e. whether he/she is an employer, own account worker, employee or unpaid family worker is defined as follows:-

16. **Employee** is a person who works for a public or private employer and receives remuneration in wages, salary, commission, tips, piece rates or pay in kind. Employees are divided into

- *Regular paid employees with fixed wage*
- *Casual paid employee*
- *Paid worker by piece rate or work performed*
- *Paid non-family apprentice*

17. **Employer** is a person working during the reference period, on own-account or with one or a few partners at a “self-employment job” with one or more employees engaged on a continuous basis.

18. **Own account worker** is a person working during the reference period, on own-account or with one or more partners at a “self-employment job”, without any employee engaged on a continuous basis; but, possibly, with one or more contributing family workers or employees engaged on an occasional basis. It includes owner cultivator, share cropper and contract cultivator.

19. **Unpaid family worker** is a person who works without pay in cash or in kind on an enterprise operated by a member of his/her household or other related persons.

20. **Other** includes member of a producer’s cooperative, etc.

21. **Informal Sector** in Pakistan is formulated in terms of household enterprise and size of employment. For statistical purpose, the provenance of employment in informal sector is given as follows:

- § All household enterprises owned and operated by own-account workers, irrespective of the size of the enterprise (informal own-account enterprises),
- § Enterprises owned and operated by employers with less than 10 persons engaged. It includes the owner (s) of the enterprise, the contributing family workers, the employees, whether employed on an occasional or a continuous basis, or as an apprentice, and
- § Excluded are all enterprises engaged in agricultural activities or wholly engaged in non-market production.

22. **Household Enterprise** or equivalently, an unincorporated enterprise, is a production unit that does not have a separate legal entity independent of the household(s) or household members that own it. It is neither a corporation nor has a complete set of accounts that would permit a clear distinction between the production activities of the enterprise from the other activities of the owner(s) i.e. it is not a quasi-corporation.

23. ***Underemployment (Time-related)*** comprises all employed persons who during the reference period satisfied the following two criteria simultaneously:

- i) Worked less than 35 hours per week,
- ii) Sought or were available for alternative or additional work.

24. ***Underemployment (Time-related) Rate*** is the time related underemployed population expressed as a percentage of the currently active population.

25. ***Unemployment*** in Pakistan comprises all persons ten years of age and above who during the reference period were:

- i) **“Without work”** i.e. were not in paid-employment or self-employment; and
- ii) **“Currently available for work”** i.e. were available for paid employment or self-employment: or
- iii) **Not currently available** for the following reasons: illness, will take a job within a month, is temporarily laid off, is an apprentice and is not willing to work: or
- iv) **Seeking work** during last week.

26. ***Unemployment rate*** is the unemployed population expressed as a percentage of the currently active population.

27. ***Multiple job holders*** relates to persons who during the reference period carried out more than one economic activity. The survey obtains information about the occupation, industry, status in employment and informal sector characteristics of secondary jobs.

28. ***Hours actually worked*** relates to the number of hours worked in the main and secondary jobs during the reference period, including any overtime and excluding any absence from work.

29. ***Population not currently active*** or “persons not in the labour force” comprises all persons who were not employed or unemployed during the reference period and hence not currently active. They are classified into the following categories:-

- a) Attending educational institutions,
- b) Engaged in household duties,
- c) Retired or old age,
- d) Too young to work,

- e) Unable to work/handicapped,
- f) Agricultural landlord and/or property owner; nature of ownership includes land, commercial/residential buildings, cinemas, hotels, petrol pumps, power looms, etc. (given on rent or lease). They are owners but they do not work for their properties,
- g) Others (persons who derive their income solely from royalties, dividends, etc; engaged in immoral pursuits such as prostitutes, beggars, thieves and smugglers etc; voluntary social workers doing work outside the family enterprise, living entirely on charity, etc.)

30. ***Occupational Injury/Disease*** refers to any personal injury or disease resulting from an occupational accident/ disease which occurs to employed person (s) i.e. an individual occurrence or event arising out of or in the course of work. Some occupational injuries are serious enough to need treatment, either at hospital, or by a doctor, nurse or some other kind of medical professional, and may mean that the injured person is unable to work, or to work normally, for some time, i.e. they have to take time off work. Other injuries may be less serious/incapacitating, so that the injured person may be able to return to work quickly. All such occupational injuries are taken into consideration. An injury should only be considered as an occupational injury if it was received at the person's work place or in the course of the person's work. Injuries received on the way to or from work are also considered to be occupational accidents. For the purpose of statistics of occupational injuries, the following terms and definitions are used:

- a) ***Occupational accident*** is an unexpected and unplanned occurrence, including acts of non-consensual violence arising out of or in connection with work which results in personal injury, disease or death;
- b) ***Commuting accident*** is an accident occurring on the habitual route between the place of work and: i) the worker's principal or secondary residence; ii) the place where the worker usually takes his/her meal; iii) the place where he/she usually receive his/her remuneration; or iv) the place where he/she receives training, which results in death or personal injury involving loss of time; travel, transport or road traffic accidents in which workers are injured and which arises out of or in the course of work, i.e. while engaged in an economic activity, or at work, or carrying on the business of the employer.
- c) ***Occupational injury*** is any personal injury, disease or death resulting from an occupational accident;
- d) ***Case of occupational injury*** is the case of one person incurring an occupational injury as a result of one occupational accident;
- e) ***Occupational disease*** is a disease contracted as a result of an exposure to risk factors arising from work activity;

- f) ***Incapacity for work*** means inability of the injured person to perform normal duties of work;
- g) ***Fatal occupational injury*** is one which leads to death within one year of the day of the occupational accident causing the injury;
- h) ***Loss of working time*** means the count of time started from the day of accident to the day prior to the day of return to work measured as calendar days, week days or working days in accordance with the severity of the injury. In the case of recurrent absences due to a single case of occupational injury, each period of absence should be measured and the resulting number of days lost for each period summed to arrive at the total loss of working time for the case of injury. Temporary absence from work of less than one day for medical treatment should not be included in time lost.

31. ***Range of data*** includes, generally, the information about the number of persons employed who suffered an injury or disease in the 12 months prior to the reference period that caused the worker to take time off and/or consult a doctor. In addition, for each injury or disease suffered, it also obtains information about

- (i) the act that caused the accident or disease,
- (ii) whether time off was taken or treatment was received as a result
- (iii) the conditions that caused the accident or injury
- (iv) the time of recovery

32. ***Income from paid employment*** relates to the amount of money earned by persons in paid employment in their main job. The income may be earned in cash or in kind, and is reported net of security contributions and, deductions for pensions and income tax. It includes the value in rupees of income in kind as well as regular or adhoc bonuses. The information on earnings is recorded per week or month and the information on bonuses is recorded per year, to convert it later on monthly basis. The survey does not obtain information on the income of self employed persons.

33. ***Entitlement to annual leave and sick leave*** relates to the number of days in the year that workers in paid employment are entitled to obtain and sick leave.

34. The questionnaire adopted for the Survey is given at Annexure-II.

SECTION- III

RESULTS

The Survey's estimates are based on the data of 36,201 sample households enumerated through July 2009 to June 2010. Findings are presented in the form of proportions and percentages to provide for all-purpose employability. The population of Pakistan as per Planning & Development Division's projection is estimated at 166.52 millions on 1st January 2010. The same has been used in arriving at absolute numbers in the report.

2. In comparison with that of the preceding LFS 2008-09, a brief account of the survey's main annual estimates follows.

Marital Status

3. Marital status consists mainly in the categories of *never married* and *married*. *Widowed* and *divorced* constitute wee part of the configuration. Since the composition of marital status is beholden to socio-cultural norms, it does not seem to be changing with the passage of time. Detailed information is given at Statistical Appendix Tables-4.

Widowed	3.8	3.8	3.8
Divorced	0.3	0.3	0.3
Total	100.0	100.0	100.0

Sex Ratio

4. Comparative figures for the overall sex ratio are close to each other. Rural figures are proximate to overall pattern while urban ones make a higher trend line. Punjab is more in line with the national trend followed by Khyber Pakhtunkhwa (KP) while, Sindh and Balochistan depart significantly in the same order. Migration, as one of the main factor in determining the size and composition of population, may be viewed for possible explanation in this regard.

Literacy

5. Literacy rate (57.7%) fares marginally higher than that of LFS 2008-09 (57.4%), more in the case of females and, in rural areas. However, rural-urban and male-female disparity seems to be closing a bit. Provinces make two distinct groupings; Punjab (59.6%) & Sindh (58.2%) and, Balochistn (51.5%) & KP (50.9%) with rising inter provincial gap in the case of former and declining one for the latter group. Relevant information is given in Table-3.

Level of Education

6. The comparative shares of literate bespeak marginal improvement in the profile of educational attainment. Nevertheless, all categories remain at the same level except a sort of increase in *below matric* (37.1%, 37.5%). Generally, males are more educated compared to females. The comparative picture is given in table-4. Detail is available at Statistical Appendix Table-3.

Migration

7. Proportion of migrants and degree of populous-ness seem to be correlated positively. In this regard, provinces make a descending sequence of Punjab (67.2%), Sindh (23.0%), KP (9.2%) and Balochistan (0.6%). Migration rises in Punjab and recedes in Sindh and KP while remains at par in Balochistan. Gender disaggregated proportions form similar configuration. Further, the proportion of male migrants is higher than of female migrants in Sindh and KP, lower in Punjab while equivalent in Balochistan.

8. *Inter provincial migration* appears to be positively associated with the level of urbanization and level of economic development. Thus, the proportions of inter provincial migrants is the highest in Sindh (39.8%) followed by Punjab (39.6%), KP (19.8%) and Balochistan (0.8%). Inter-provincial migration in Punjab is on rise, recedes in Sindh and, KP while, remains equivalent in the case of Balochistan. Gender disaggregated proportions form similar pattern. The proportion of female migrants is higher than of male migrants except in KP.

9. The proportion of *intra provincial migrants* bespeaks positive nexus with the degree of populous-ness. Provinces form expected sequence in the order of Punjab (75.0 %), Sindh (18.2%), KP (6.3%) and Balochistan (0.5%). Similar pattern obtains by gender. Intra-provincial migration increases in Punjab, recedes in Sindh and KP while levels same in Balochistan. Proportion of male migrants is higher than of female migrants in all provinces

except in Punjab. Relevant information is given in table-5 and 5.1. Detail is available at Statistical Appendix Tables-11.

10. Stream of migration flow within and between urban and rural areas. Since urbanization is the inevitable concomitant with the process of economic development, rural to urban migration steals most of the limelight due to enormity of consequential demand on the socio-economic resources.

11. **Rural to urban migration** accounts for more than quarter (28.9%) of the total flow of migrants within and between areas. Males are more savvy (33.3%) compared to females (25.7%). Proportions by province form a descending sequence of Balochistan (34.7%), Punjab (31.2%), Sindh (27.0%) and KP (16.4%). Composition by sex in Punjab and Sindh is relatively masculine, KP's feminine while Balochistan's is even.

12. As for change during the comparative periods, the rural to urban migration is on rise in toto and by province, except in Balochistan. The change is more pronounced in the case of males in all provinces. The relevant data is present in the Table 5.2. Detail is available at Statistical Appendix-11.

Reasons of Migration

13. According to the size of the relevant proportions, the *marriage* (31.6%) and movement *with parents* (23.3%) constitute the foremost reasons for migration. The former is proffered more by females while the latter's calculus owes more to males than females. Migration *with spouse* (11.7%) and *homecoming* (9.0%) make the next important couplet. Again, the former is related more by females while the latter is determined more by males than females. Next is the triplet of reasons relating to *found the job* (5.5%), *searching for job* (5.6%) and assorted/*other* explanation (5.8%). All these reasons are related more by males than females.

14. *Job transfer* (2.1%) and pursuit of *business* (1.7%) are the fourth most important set of reasons, put forth more by males than females. *Education* (0.9%) and accompanying *with son/daughter* (1.1%) is the last couplet of reason. The former is proffered more by males while the latter is related more by females.

15. As for change during the period marked by the consecutive surveys, the comparative figures seem to be proximate to each other, characterized with marginal changes. Relevant information is given in table-6. Detail is available at Statistical Appendix Table-12.

Migrants Employed by Employment Status

16. Four in five (80%) of migrants are either *employees* (45.5%) or *own account workers* (34.2%). About one in six (17.6%) are *unpaid family workers* and one in forty (2.6%) are *employers*. More males than females are engaged as *employees* (51.0% vs 27.3%), *employers* (3.3%, 0.3%) and *own account workers* (39.1% vs 18.2%) while more females than males work as *unpaid family workers* (54.2% vs 6.6%). As for change during the comparative period, *employees* become more masculine but levels same, *own account workers* casts off a bit gender equivalently, *unpaid family workers* increase due to rising share of females and *employer* remain at the same level for both genders. Relevant information is given in Table-7. Detail is available at Statistical Appendix Table-13.

Labour Force Participation Rates: Crude

17. Crude participation rate (33.0%) suggests fractional improvement as compared to that of LFS 2008-09 (32.8%). However, improvement is more of rural than urban and female than male provenance. Participation rates increase in Punjab (34.5%, 35.1%), while lose some steam in the descending order of KP (27.7%, 26.7%), Balochistan (27.8%, 26.9%) and Sindh (33%, 32.9%). Area and gender wise, change in the foremost is more rural and feminine, middle one's is more urban and masculine while lattermost's is rural and masculine. Similar configuration is observed in the case of augmented participation rates (table-8, figure-1). Detail is presented in Statistical Appendix Tables-14 and 15.

FIGURE-1: CRUDE ACTIVITY (PARTICIPATION) RATES BY SEX FOR PAKISTAN, RURAL AND URBAN

APR:- Augmented Participation Rates are based on additional probing questions asked from persons especially females engaged in housekeeping and other related activities.

Labour Force Participation Rates: Refined

18. Generally, refined activity rates follow the pattern of crude participation rates, though, with wider rural-urban and male-female disparity. Refined activity rate (45.9%) indicates a fractional gain as compared to that of LFS 2008-09 (45.7%). Gender specific rates indicate a sort of offsetting changes; male's participation rates lose a fraction while female's gain by a bit wider margin. However, area wise rates accrue equivalent fractions. Increase is observed in the case of Punjab (47.2%, 48.1%) while decrease in other provinces in the descending order of KP (40.2%, 38.6%), Balochistan (41.8%, 41.2%) and Sindh (45.8%, 45.6%). The change in the two foremost and the lattermost is more pronounced for females and, in rural areas while 2nd last's is urban and masculine. The pertinent data is given in table-9. Detail is at Statistical Appendix Tables-14 and 15.

Labour Force Participation Rates: Age Specific

19. Table-10 (figure 2) presents comparative picture of age specific participation rates (ASPR). As expected, the age intervals between *twenties* and *fifties* (20-59) mark the most productive period of life. The comparative size of gender disparity, though, considerable in all age intervals, seems to be shrinking. Most of age groups post a sort of increase in the participation rates. Similarly, most of the age groups indicate rise in females participation rates while that of males make a mixed picture. Detailed information is at Statistical Appendix Table-14.

Labour Force: Absolute Figures

20. The absolute figure of labour force is the multiple of crude participation rate with mid-reference year estimate of the population. The numbers of employed and unemployed persons are the “labour force multiplied with their percentages”. The labour force increases from 53.72 million in 2008-09 to 54.92 million in 2009-10. The volume of labour force increases in Punjab (1.22 million), and Sindh (0.30 million) while decreases in KP (0.28 million) and Balochistan (0.04 million). The change in the provincial profile is more of rural origin in

Punjab, KP and, Sindh while equivalently urban and rural in Balochistan. Change is more pronounced in the case of females in the northern provinces while, for males in southern ones. Relevant information is given in Table-11.

21. The size of number of employed increases from 50.79 million in 2008-09 to 51.87 million in 2009-10. The size of change makes the expected sequence in the descending order of Punjab (1.20 million), Sindh (0.18 million), KP (0.26 million) and Balochistan (0.04 million). However, change in the former two is positive while latter two's negative. Further, change is more pronounced in rural than urban areas and, for males in Balochistan & Sindh, for females in KP and Punjab. The detail is given in Table-12.

22. Employment share of *manufacturing* (13.2%) puts on while *wholesale & retail trade* sheds (16.3%) some fractions as compared to the respective estimate of LFS 2008-09 (13.0%, 16.5%). The change seems to be male driven. All other industry divisions level same during the comparative periods. Gender disaggregated shares depict the similar configuration. Comparative information is given in table-13 (Figure-3). Detail is at Statistical Appendix Table-16.

23. *Skilled agriculture & fishery workers* constitute the largest group (38%) of the total employed in 2009-10 followed by *elementary occupations* (18%), *craft & related trades workers* (15%), *legislator/senior officials & managers* (12%), *service works* (5%), *technician & associate professionals* (5%), *plant/machine operators & assemblers* (4%), *professional* (2%) and *clerks* (1%). As for distribution across the groupings, *farming activities* (63%), *elementary occupations* (16 %) and *craft & related trade workers* (11%) account for nine-tenth of females workers. However, males seem to be distributed a sort of proportionately in all activities. Comparative labour force surveys present a mixed picture of marginal changes over time. A sort of increase is indicated in the *elementary occupations* and *skilled agricultural & fishery workers*. Change in the former is more pronounced for males while latter's for females. *Legislators/senior officials & managers, technicians & associate professionals* and *plant/machine operators & assemblers* seem to be losing steam. Change in the foremost and the lattermost is more of masculine provenance, while middle one changes genders equivalently. All other groups level same approximately. Relevant information is given in table-14 (Figure -4). Detail is provided at Statistical Appendix Table-17.

24. *Employees* constitute the largest group (35.4%) followed by *own account workers* (34.2%), *unpaid family workers* (29.1%) and *employers* (1.3%). Near seven out of ten females work as *unpaid family workers* (66.3%) compared to about two out of ten males (18.7%) while eight out of ten males are *own account workers*, *employees* and *employers*. A sort of increase in the comparative profiles of *own account workers* and *employers* is observed. *Employees* (35.8%, 35.4%) and *unpaid family workers* (29.7%, 29.1%) seem declining, more due to males in the former and, females in the latter case. Comparative data are given in table-15. Detail is at Statistical Appendix Table-18.

Employed: Number of Hours Worked During the Week

25. About one in two hundreds (0.5%) of the currently employed persons constitute the group of people who had a job attachment but did not work last week due to certain reasons. About three out of ten (29%) worked 56 hours or more a week. Near eight in ten (86%) worked more than “35 hours a week”– the duration representing full (time related) employment. As for provinces, the proportion of “not worked” ranges from minimum in Sindh and Balochistan (0.2%) to maximum in KP (0.9%) with Punjab (0.5%) lying in between. For those worked more the 56 hours a week, Punjab’s share is the maximum (31%) and KP’s minimum (19%) with Sindh (29%) and Balochistan (25%) bridging the extremes in the same order. Generally, the profile of comparative surveys is almost similar. Relevant information is given in table-16. Detail is provided at Statistical Appendix Tables-18.

Employed: Informal Sector

26. Informal sector accounts for more than seven-tenth (73%) of the employment in main jobs outside agriculture, more in rural (76%) than in urban areas (71%). On the other hand, formal sector activities are more concentrated in urban areas (29%) as compared to in rural areas (24%). Females in comparison with respective share of males fare more numerous in urban formal and less in rural formal. On the contrary, males are more numerous in urban informal while less in rural informal as compared to respective shares of females. Formal and informal composition of the comparative surveys remains equivalent during the period. Relevant information is given in table-17. Detail is available at Statistical Appendix Table-20.

27. According to size of respective shares, the industry grouping form a descending sequence of *wholesale and retail trade* (39.2%) *manufacturing* (21.4%), *construction* (15.8%), *community, social and personal services* (10.8%) and *transport* (10.8%). The *other* category (comprising of *mining & quarrying; electricity, gas & water* and *finance, insurance, real estate & business services*) accounts for two percent. *Manufacturing*, with more than half (54.6%) of females as compared to about one-fifth (17.8%) of males, is the most feminine while the *wholesale and retail trade*, with more than two-fifth (42.2%) of males compared to about one-eighth (11.5%) of females, is the most masculine group. The latter trends up while former remains unchanged. *Community/ social & personal services* and *construction* seem rising, more for males, while *transport, storage & communication* and *other* level same. Comparative Labour Force Surveys indicate a mixed trend though indication of structural shift is not discernable. Relevant information is given in table-18. About three in ten (29.8%) are reported as *craft & related trade workers*, over a quarter (26.0%) are *legislator/senior officials & managers* and above one-fifth (22%) are engaged in *elementary (unskilled) occupations*. *Services workers/shop & market sales workers* come fourth (9%) followed by *plant/machine operators & assemblers* (6.4%), *technicians & associate professionals* (4%) and *professionals* (2.2%). More than one-half (55%) of females compared to over three-tenth (27%) of males are engaged in *craft & related trade activities*. *Technicians and associate professionals* are also female-intensive while males dominate in rest of occupations though, *skilled agriculture & fishery workers* do exhibit gender even composition. *Plant/machine operators & assemblers* and *legislators/senior officials and managers* are exceptionally male-intensive in the same order. There is mixed scenario of marginal changes during the comparative periods. Main information is given in table-19. Detail may be seen at Statistical Appendix Table-22.

Employment Status: Informal Sector

29. The employment status chiefly consists in the categories of *employees* (44%) and *own account workers* (42%). The former constitutes majority of females (48%) and latter, better part of males (43%). About one in ten workers (11%) is reported as *unpaid family worker* and near one in thirty three (2.5%) are comprised of *employers*. The share of female *unpaid family workers* (20%) is twice the share of males (10%) while *employers* are predominantly male intensive. As far change during the comparative periods, *employees* and *unpaid family workers* indicate a sort of enervation, for both genders in the former case and, male driven in the latter's. *Own account workers* and *employers* betoken a sort of increase more pronounced in the case of females. Relevant information is given in Table-20. Detail is provided at Statistical Appendix Table-23.

Unemployment Rates: Overall

30. The social security net in Pakistan is far from exhaustive. The distribution of assets is highly skewed and something to fall back on in rainy season is simply not available to most of the populace. Thus, a miniscule minority can afford to remain off the work. Further, employment scene is preponderated by agriculture, and informal activities with low threshold of entry, exit and paraphernalia of requisites. As such, most of the people tend to get engaged into some sort of economic activities irrespective of any considerations regarding size of reward and working age, in order to make both the ends meet. Thus, unemployment rate in Pakistan tends to be estimated lower than perceived.

31. Unemployment rate (5.6%) is fractionally higher than that of the previous survey (5.5%). The change is visible in the case of females while that of males remains high equivalent. Area wise unemployment rates gather steam equivalently. The relevant figures are presented in Table-21.

Unemployment Rates: Age Specific

32. The comparative age specific unemployment rates of *early teens* (10-14), *twenties* (20-29), *latter thirties* to *forties* (35-49) age intervals tend to rise up while that of *latter teens* (15-19) and *above fifties* (50-60+) seem on decline. Comparative change in the age specific rates appears more pronounced in the case of females than males unemployment rates. Relevant data may be seen in Table-22 and figure 5. Unemployed: Absolute Figures

33. The volume of unemployed persons increases from 2.93 million in 2008-09 to 3.05 million in 2009-10. Areas and gender wise, the increase is more of rural and female provenance. Volume of unemployed persons increases in urban Punjab and, Sindh, while decrease in urban KP and, levels same in Balochistan. As for gender specific unemployment,

the change in the comparative profile of Punjab and Sindh is more in the case of females while KP's of males. Balochistan's gender-specific numbers undergo offsetting changes to remain at the same level.

Underemployment Rates: Time-related

34. Underemployment rates decrease from 1.44% in 2008-09 to 1.25% in 2009-10. Gender wise, the decrease is more pronounced in the case of females than males underemployment. Further rural underemployment rate posts higher decrease as compared to urban's. Similarly, change in the area wise underemployment rates is more visible in the case of females than males. Given the stagnating economic scenario, decreasing underemployment rates seems to signify increasing recourse to multiple jobs to help grapple with the rising cost of living. Relevant information is given in Table-24.

Employed: Occupational Safety and Health

35. Questions on occupational safety and health are asked from the employed persons. About one in thirty three (2.9%) employed persons report some sort of occupational injury/disease in the 12 months preceding the date of enumeration that resulted in the loss of working time or the consultation with a practitioner. The percentage suffered finds male workers more vulnerable (3.5%) relative to female workers (0.9%). Similarly, rural workers (3.4%) are more vulnerable than urban workers (1.8%). Vulnerability seems to be rising during the comparative period, for males and, more in rural than urban areas generally. Comparative data sets are given in Table-25.

Major Industry Divisions: Occupational Safety and Health

36. Mainly, the sufferers belong to *agriculture* (50.2%), *construction* (14.3%), *manufacturing* (12.8%), *wholesale & retail trade* (10.6%) and *transport/storage & communication* (8.0%). Females are twice (94.3%) as exposed to risk as males (47.0%) in *agriculture*. Contrarily, males versus females are more vulnerable in *manufacturing* (13.6%, 2.0%) and *community/social & personal services* (3.7%, 1.8%). The activities of *construction*, *wholesale & retail trade* and *transport/storage & communication* are generally masculine in the composition of sufferers. The comparative risk profiles of *agriculture*, *manufacturing* and *construction* improve while those of *community/ social & personal services* and *whole sale & retail trade* deteriorate. Remaining activities level same during the comparative periods. Relevant information is given in table-26. Detail is at Statistical Appendix Table-29.

Major Occupational Groups: Occupational Safety and Health

37. The largest group of the sufferers (43.5%) is found in *skilled agriculture & fishery activities*. Comparative figures of the two surveys indicate improvement, for males only, though more than two four-fifths (83.9%) of female sufferers belong to this group. The next major groupings are *elementary occupations* (22.3%) and *craft & related trades workers* (18.9%). Risk profile of the former is increasing more for males while the latter's decreasing, more for females. As for the masculine groups of *plant/machine operators & assemblers* and *legislators/senior officials & managers*, the former indicates improvement while the latter deterioration. Relevant information is given in table-27. Detail is provided at Statistical Appendix Table-30.

Employment Status: Occupational Safety and Health

38. About eight out of ten sufferers (79.2%) are either *own account workers* (41.6%) or *employees* (37.6%). In comparison with the respective estimates of the LFS 2008-09 (38.8%, 38.3%), the former group gets a bit riskier for both genders while the latter betokens improvement more for females. *Unpaid family workers* (20.2%) also indicate improvement gender evenly. *Employers* allude to a sort of deterioration in their risk profile. Relevant information is given in table-28. Detail is available at Statistical Appendix Table-31.

Types of Treatment Received: Occupational Safety and Health

39. Majority (51.3%) of the sufferers is reported to have *consulted a doctor* or other medical professionals, one-in-ten (11%) get *hospitalized* and about one-fifth (22.4%) *take time off work*. Vulnerability levels same in the 1st and 2nd category during the comparative period, consisting in a sort of offsetting changes in the percentage of male and female sufferers. The last one (i.e took time off work) gets safer for male sufferers exclusively while profile of female sufferers seem to be deteriorating. The rising incidence of taking time off work bespeaks more affordability to pursue treatment. Males (52%) are more inclined to get doctor's advice compared to females (40%). Similarly, males seem in better position to get *hospitalized* (11%) compared to females (7%). The remaining one-seventh (14%) did not avail themselves of any of the aforementioned options increase over time alluding to a sort of increasing marginalization at the workplace. Relevant information is given in Table-29. Detail is available at Statistical Appendix Table-32.

Wages

Major Industry Division: Wages

40. Generally, size of wage seems to higher in tertiary activities followed by secondary and primary assignments. The size of wage also appears to be influenced positively by the element of white-collar ness of an industry/division. The gender differential in wages seems to be influenced by the gender composition of group. Arguably, the nominal wage is trending up during the comparative period. Since females constitute much lower proportion of wage earners, a sort of anomalous position in their case is observed in certain categories, which may be attributed to sampling effect and consequential scariness of response. Relevant information is given in Table-30. Detail is available at Statistical Appendix Table-38.

Major Occupation Group: Wages

41. Generally, wages seem to be associated positively with the element of “white-collar ness” in an occupation. The gender differentials in the wages bespeak nexus with the gender composition of an occupational group. The more a group is masculine, the less it is likely to find females in high paid assignments and thus higher is the average wage of males as compared to that of females. The feminine group of *skilled agriculture & fishery workers* bears this observation out in the contrary perspective. However, the feminine group of *elementary occupations* seems to be an exception though its anomalous position can be explained in term of the greater number of in and out door chores the males are likely to perform as compared to females, in our socio-cultural setting. As for changes during the comparative periods, nominal wages seem to be trending up arguably. Relevant information is given in Table-31. Detail is available at Statistical Appendix Table-39.
