Preface

The Sri Lanka Household Income and Expenditure Survey (HIES) is conducted by the Department of Census and Statistics (DCS) under the National Household Sample Survey Program. The HIES is an year long sample survey which is conducted in 12 consecutive monthly rounds and an equally distributed country representative sample is enumerated in each monthly round to capture seasonal and regional variations in household income, expenditure and consumption patterns. The HIES series which was started in 1980/81 was conducted once in every five years until the HIES 2006/07 was conducted and thereafter, as rapidly changing economic conditions demanded far more frequent monitoring of income and expenditure patterns, the DCS, with the help of the rapid developments in the ICT, decided to conduct the HIES once in every three years in Sri Lanka. The HIES 2012/13 is the eighth survey in the HIES series.

The field data collection of the survey was done in the twelve months starting from July 2012 to June 2013 and successfully covered all the districts for the first time after 26 years. The previous survey, which DCS covered the entire country in a similar investigation was the Labour Force and Socio Economic Survey conducted in 1985/86.

This report is the preliminary report of the HIES 2012/13, which is based only on the information gathered in the first three monthly rounds of the survey and it publishes much needed socio economic development indicator information in Sri Lanka.

D. C. A. Gunewardena
Director General
Department of Census and Statistics

Acknowledgements

Planning and execution of the survey was done by staff of the Samples Survey Division (SSD) under the direction of Mr. W. W. M. A. S. Premakumara, Additional Director General Statistics.

Field data collection activities of the survey were done by Statistical Officers and Statistical Assistants attached to divisional secretariat divisions and district statistics offices under the direct supervision of Deputy Director/ Senior Statistician/ Statistician in Charge of the respective district statistics offices.

Survey supervision activities were carried out by Mr. J. S. N. P. Dharmawardana, Miss. C. Jayawickrama, Senior Statisticians and Mr. P. A. Subawickrama, Mr. D. C. A. Fernando, Mrs. W. A. C. Wijebandara, Mr. H. T. Fonseka Mr. U. B. Saputhanthiri, Mrs. D. D. Deepawansa, Statisticians of the sample surveys division and heads of the statistics divisions of each district.

Co-ordination of the field work and data cleaning activities were performed by Statistical Officers, Statistical Assistants, ICT Assistants, Data entry operators and Coding clerks under the supervision of Mr. J. S. N. P. Dharmawardana, Miss. C. Jayawickrama, Senior Statisticians and Mr. P. A. Subawickrama, Mr. D. C. A. Fernando, Mrs. W. A. C. Wijebandara, Mr. H. T. Fonseka Mr. U. B. Saputhanthiri, Mrs. D. D. Deepawansa, Statisticians.

Data keying was done by the staff of the ICT Division and District offices under the directions of Mr. S. A. S. Bandulasena, Director, and Mr. W. H. P. W. Weerasiri, Deputy director ICT). Development of samples selection, Data cleaning, Estimation and tabulation programs were done by Mr. K. M. R. Wickramasinghe, Assistant Director (ICT).

This publication was jointly prepared by the Statistical Assistants, Mrs. A. N. Ekanayake, Mr. M. B. F. M. Shiras, Mr. K. B. G. U. Jayatissa, Mr. S. Balasankar, Mrs. C. S. Liyanage, Mrs. D. S. P. Meegoda, Mr. W. Ravi de Silva, Mr. R. P. A. S. Pathirana and Mr. S. Jegan, under the supervision of Mrs. D. D. Deepawansa Statistician and Mr. K. M. R. Wickramasinghe, Assistant Director (ICT) contributed editing and preparing the report for printing.

Printing of the report and other survey materials were done by the staff of the Printing Division under the supervision of Mr. W. C. Weerawansa Senior Statistician (presently retired) and Mr. D. C. A. Fernando, Statistician.

The services provided by the Management assistants, Office assistants the Sample Survey Division are acknowledged for their valuable contributions during the whole survey process.

Finally, I wish to express my sincere appreciation to all the respondents of the survey for their invaluable cooperation extended to make this project a real success.

Executive Summary

Demographic Characteristics

Household population - Sri Lanka	20.2 million
Male population - Sri Lanka	9.5 million
Female population - Sri Lanka	10.7 million
Urban population - Sri Lanka	3.6 million
Rural population - Sri Lanka	15.7 million
Estate population - Sri Lanka	0.9 million
Number of households - Sri Lanka	5.2 million
Male headed households - Sri Lanka	4.0 million
Female headed households - Sri Lanka	1.2 million
Percentage of female headed households - Sri Lanka	22.6 %
Percentage of never attended school population - Sri Lanka	4.2 %

School Education

Percentage of currently attending school children (aged 5-14 years) - Sri Lanka	98.6 %
Percentage of currently attending school children (aged 5-20 years) - Sri Lanka	84.8 %

Income

Mean household income per month - Sri Lanka	Rs. 46,207
Mean household income per month - Urban sector	Rs. 68,336
Mean household income per month - Rural sector	Rs. 42,184
Mean household income per month - Estate sector	Rs. 31,895
Median household income per month - Sri Lanka	Rs. 30,400
Median household income per month - Urban sector	Rs. 41,958
Median household income per month - Rural sector	Rs. 28,921
Median household income per month - Estate sector	Rs. 25,664
Share of income to total household income - Poorest 20% - Sri Lanka	4.4 %
Share of income to total household income - Poorest 40% - Sri Lanka	13.4 %
Share of income to total household income - Richest 20% - Sri Lanka	53.5 %
Gini co-efficient of household income - Sri Lanka	0.48
Gini co-efficient of household income - Urban sector	0.51
Gini co-efficient of household income - Rural sector	0.47
Gini co-efficient of household income - Estate sector	0.39
Average household size - Sri Lanka	3.9
Average household size - Urban sector	4.0
Average household size - Rural sector	3.8
Average household size - Estate sector	4.1

Average per capita income per month - Sri Lanka	Rs. 11,932
Average per capita income per month - Urban sector	Rs. 17,150
Average per capita income per month - Rural sector	Rs. 11,003
Average per capita income per month - Estate sector	Rs. 7,719

Income receiver's mean income per month - Sri Lanka	Rs. 25,778
Income receiver's mean income per month - Urban sector	Rs. 36,174
Income receiver's mean income per month - Rural sector	Rs. 24,079
Income receiver's mean income per month - Estate sector	Rs. 15,035

Number of income receivers per household - Sri Lanka	1.8
Number of income receivers per household - Urban sector	1.9
Number of income receivers per household - Rural sector	1.7
Number of income receivers per household - Estate sector	2.1

Monetary income per month - Sri Lanka	Rs. 39,584
Non- monetary income per month - Sri Lanka	Rs. 6,624

Expenditure

Mean household expenditure per month - Sri Lanka	Rs. 40,887
Mean household expenditure per month - Urban sector	Rs. 59,001
Mean household expenditure per month - Rural sector	Rs. 37,561
Mean household expenditure per month - Estate sector	Rs. 29,779

Expenditure on food and drink per month - Sri Lanka	Rs. 15,358
Expenditure on non-food items per month - Sri Lanka	Rs. 25,529

Food ratio - Sri Lanka	37.6 %
Food ratio - Urban sector	31.4 %
Food ratio - Rural sector	39.1 %
Food ratio - Estate sector	49.6 %

Gini co-efficient of household expenditure - Sri Lanka	0.40
Gini co-efficient of household expenditure - Urban sector	0.41
Gini co-efficient of household expenditure - Rural sector	0.39
Gini co-efficient of household expenditure - Estate sector	0.31

Poverty

Head count ratio - Sri Lanka	6.5 %
Head count ratio - Urban sector	2.4 %
Head count ratio - Rural sector	7.5 %
Head count ratio - Estate sector	6.2 %

1. Introduction

The Household Income and Expenditure Survey (HIES) is conducted by the Department of Census and Statistics (DCS) under the National Household Survey Program (NHSP) of Sri Lanka. The DCS has completed the recent survey, the HIES 2012/13 and till the final report is published, this publication exposes preliminary information of the survey to fulfill urgent data needs of the country.

1.1 History

The HIES was firstly started as Labour Force and Socio Economic Survey (LFSES) in 1980/81 and it was conducted for the second time in 1985/86. The LFSES, through a single survey, provided comprehensive information on labour force, household income and expenditure and demographic characteristics of the households and household population in Sri Lanka. In 1990 the LFSES was separated into the under mentioned 2 individual surveys as the labour force information of the country was more frequently needed.

1. Labour Force Survey (LFS)
2. Household Income and Expenditure Survey

The first HIES, conducted as a separate survey was the HIES 1990/91 and this survey provided information on household income and consumption expenditure to measure the levels and to observe the changes of living conditions in the country. The HIES information is also used to estimate consumption needs of the country and to compute various other important indicators related to poverty and price indices. Generally the HIES surveys a sample of 25,000 housing units throughout the country to facilitate the information be given at district level. Field data collection of the survey is carried out in twelve consecutive monthly rounds to capture seasonal variations in income, expenditure and consumption of households. The data collection of the survey is done through direct interviews using the survey questionnaire, which included the following three main sections.

1. Demographic characteristics
2. Household expenditure (on food and non-food)
3. Household income (monetary and non-monetary)

The HIES gathers information related to demographic characteristics of the members of the surveyed households, expenditure on food and non-food items and income received by each household member from all the different sources in a compulsory manner. Starting from the HIES 2006/07, the survey questionnaire was further expanded beyond the collection of just demographic, income and expenditure information, introducing 7 new sections to collect almost all the other household information that helps to

understand total living standards of the households and the following are the new areas covered by the HIES starting from the HIES 2006/07.

1. School education (aged 5-20 years)
2. Health information
3. Inventory of durable goods
4. Access to infrastructure facilities
5. Household debts and borrowings
6. Housing, sanitary and disasters
7. Land and agriculture holdings

The HIES 2012/13 is the eighth in the HIES series and the field work of the survey was completed during the period from July 2012 to June 2013 covering all the districts in Sri Lanka.

1.2 Limitations of the data

Information given in this preliminary report of the HIES 2012/13 is based on the data collected in the first three months, July, August and September, 2012 out of the total 12 survey months spanned from July 2012 to June 2013.

The information in this report is presented at national, sector and province levels along with the previous survey findings wherever possible to facilitate effective temporal comparisons. However the final report of the survey, which covers an island wide sample of over 25,000 households covering all the districts, provides all of the information published by this report and many more at district level too.

1.3 Survey methodology

Sample design of the survey is two stage stratified and the Urban, Rural and the Estate sectors in every district are the selection domains. Thus the district is the main domain used for the stratification. The sampling frame is the list of housing units prepared for the Census of Population and Housing (CPH) 2011.

1.3.1 Selection of Primary Sampling Units

Primary sampling units (PSUs) are the census blocks selected at the first stage selection and the sampling frame, which is the collection of all the census blocks prepared in CPH 2011 is used for the selection. The PSU selection is carried out within all the independent selection domains assigned with different sample size allocations, which totals into the country sample size of 2,500 PSUs. The method of selection of the PSUs at the first stage is systematic with a selection probability given to each census block proportionate to the number

of housing units available in the census blocks (size) within the selection domains (PPS).

The selected PSUs are updated to include newly built housing units and to exclude demolished or vacated housing units, which are no longer considered as housing units according to the survey definitions, in order to capture natural growth and to make necessary adjustments for the same. The PSU updating operation in field is generally done within less than one month period just prior to the survey of the PSU and hence it is carried out throughout the entire 12 months survey period.

1.3.2 Selection of Secondary Sampling Units

Secondary Sampling Units (SSUs) or Final sampling units (FSUs) are the housing units selected at the second stage from the 2,500 PSUs selected at the first stage. From each PSU, 10 SSUs (housing units) are systematically selected giving each housing unit in the PSU an equal chance to be selected for the survey. The total sample of size 25,000 housing units results at the end of the sampling process and this sample represents the whole country in different probabilities depend on the different sample sizes allocated for the selection domains.

1.3.3 Sample allocation

Allocation of the number of PSUs or determining the sample sizes for the districts is made proportionate to the number of housing units and the standard deviations of the mean household expenditure values reported in the respective districts in previous surveys (Neymann Allocation). Sector allocation of the district sample is made proportionate to the square roots of the sizes of the respective selection domains (Urban, Rural and Estate sectors in the district). The sample of PSUs within the selection domain is equally distributed among the 12 survey months and the monthly sample too is equally dispersed among all the weeks in the month assigning a specific week for each PSU for the survey activities. Table 1.1 and Table 1.2 depict the sample distribution and response by district and by sector respectively.

Table 1.1 Sample allocation and completion by district

District	Housing units		Households responded
	Selected	Responded	
Sri Lanka	6557	5407	5442
Colombo	770	575	577

Sector	Housing units		Households responded
	Selected	Responded	
Sri Lanka	6557	5407	5442
Urban	1720	1386	1397
Rural	4149	3457	3475
Estate	688	564	570

1.4 Estimation procedure

Let \hat{X}_j be the estimate of any given characteristic for j^{th} district and this could be given by,

$$\begin{aligned}\hat{X}_j = & \frac{1}{m_{j(u)}} \sum_{h(u)=1}^{m_{j(u)}} \frac{1}{P_{h(u)}} \frac{N_{h(u)}}{n_{h(u)}} \sum_{i(u)=1}^{n_{h(u)}} X_{hi(u)} \\ & + \frac{1}{m_{j(r)}} \sum_{h(r)=1}^{m_{j(r)}} \frac{1}{P_{h(r)}} \frac{N_{h(r)}}{n_{h(r)}} \sum_{i(r)=1}^{n_{h(r)}} X_{hi(r)} \\ & + \frac{1}{m_{j(e)}} \sum_{h(e)=1}^{m_{j(e)}} \frac{1}{P_{h(e)}} \frac{N_{h(e)}}{n_{h(e)}} \sum_{i(e)=1}^{n_{h(e)}} X_{hi(e)}\end{aligned}$$

Where,

$m_{j(u)}$ = Number of census blocks selected from the urban sector of the j^{th} district for the survey

$P_{h(u)}$ = Selection probability of the h^{th} census block in the urban sector.

$$P_{h(u)} = \frac{S_{jh(u)}}{\sum_{h=1}^{M_{jh(u)}} S_{jh(u)}}$$

$S_{jh(u)}$ = Measure of size (number of housing units) of the h^{th} census block in the urban sector of the j^{th} district.

$M_{jh(u)}$ = Total number of census blocks in urban sector of the j^{th} district.

$N_{h(u)}$ = Total number of housing units listed in the h^{th} census block in the urban sector.

$n_{h(u)}$ = Number of housing units selected from the h^{th} census block in the urban sector.

$X_{hi(u)}$ = The observed value for the i^{th} sample household in the h^{th} census block in the urban sector.

$m_{j(r)}$, $P_{h(r)}$, $S_{jh(r)}$, $M_{jh(r)}$, $N_{h(r)}$, $n_{h(r)}$, and $X_{hi(r)}$ are corresponding terms for the rural sector and $m_{j(e)}$, $P_{h(e)}$, $S_{jh(e)}$, $M_{jh(e)}$, $N_{h(e)}$, $n_{h(e)}$ and $X_{hi(e)}$ are corresponding terms for the estate sector.

The estimate for the total value of the characteristic X for the 25 districts of the country could be given by,

$$\hat{X} = \sum_{j=1}^{25} \hat{X}_j$$

Note:

The estimation procedure given above is for the total sample to be covered in the 12 monthly rounds and the estimations given in this publication is based on the sample covered only in the first 3 monthly rounds.

1.5 Adjustment for unit non-responses

The state of the occurrence of unit non-responses are determined by examining the final result code recorded under data control section of the survey schedule. Based on the final result codes, the households are grouped into the following categories, which later used as a basis to adjust for the unit non-response.

Result category and description	Result code
1. Schedule completed	1
2. Housing unit demolished or vacant	6
3. Unable to complete schedule, refusal, temporarily away etc.	2,3,4,5,9

Category 1 and 2

These are considered as fully accounted for as a schedule was completed to the extent required by the situation at the time of interview and therefore no adjustment is necessary.

$$\hat{X}_{jk(u)} = \frac{1}{m_{jk(u)}} \sum_{h(u)=1}^{m_{jk(u)}} \frac{1}{P_{h(u)}} \frac{N_{h(u)}}{n_{h(u)}} \sum_{i(u)=1}^{n_{h(u)}} X_{hi(u)}$$

Category 3

This is incomplete therefore a non-response adjustment is made for this category. The assumption made here for the adjustment of non-response is the proportion of households in category 3 is the same as the corresponding proportion for sample households in category 1. This assumption is applied on a block-by-block basis separately for urban, rural and estate sectors. The block weight before adjusting for unit non-response was

$$W'_h = \frac{1}{m_j} \sum_{h=1}^{m_{jk}} \frac{1}{P_h} \frac{N_h}{n_h}$$

Where

N_h = Total number of housing units listed in h^{th} block

n_h = Number of housing units selected in h^{th} block.

The revised weight should take the form

$$W_h = W'_h \cdot \left(\frac{n^1_h - nh_2}{nh_1} \right)$$

, where

n_{h1} = Number of sample households in category 1.

n_{h2} = Number of sample households in category 2.

n^1_h = Total number of households in all the 3 categories (category 1, 2 and 3)

1.6 Definitions and Concepts

Readers should aware about the frequently used definitions of the survey terms prior to interpret or compare the data. The definitions of the terms frequently used in this report are given below.

Household

A household may be a one-person household or a multi person household. A one-person household is a unit where a person lives by himself and makes separate provision for his food, either cooking himself or purchasing. A multi person household is a group of two or more persons who lives together and has a common arrangement for cooking and partaking food. Boarders and servants who share the meals and housing facilities with other members of the household are also considered as members of the household.

Head of the household

Head of a household is a person who usually resides in the household and is acknowledged by the other members of the household as the head of the household.

Residential sector

The residential sector can be either Urban sector, Rural sector or Estate sector.

Urban Sector

Area governed by either Municipal Council (MC) or Urban Council (UC) is considered as Urban Sector.

Estate Sector

Plantation areas, which are more than 20 acres of extent and having not less than 10 residential laborers, are considered as estate sector.

Rural Sector

Residential areas, which do not belong to the Urban sector or Estate sector as described above, are considered as the Rural sector.

Marital Status

The marital status recorded was the current status at the time of the survey. A person whose marriage was registered is classified as married (registered). If the marriage has not been registered according to the law but the person claimed to be married according to the custom or repute then it is also classified as married (customary).

A person is regarded as divorced only if a divorce has been obtained in a court of law. A person who has obtained a judicial or legal separation in a court of law is classified as separated (legally). On the other hand if a person had been voluntarily separated without obtaining a court order then such persons fall into the same category classified as separated (not legally)

Educational attainment

This refers to the highest academic qualification obtained and the professional and technical qualifications are excluded. In the case of person with no such qualifications, the highest grade or class passed in school is considered as the level of education or educational attainment.

Share of income

The share of income is calculated in the form given below

$$\text{Share of income} = \frac{\text{Total income of the households or persons belong to the group}}{\text{Total income of all households or persons in all groups}}$$

Household size

Number of persons usually living in the household including boarders and servants etc. is defined as the household size.

Household income deciles

Income deciles are income groups whose boundaries are defined as to get 10 percent of the total number of households fallen into each group.

Household expenditure deciles

Expenditure deciles are defined similarly as income deciles, but expenditure values are used in place of income values.

Gini Co-efficient

The Gini Co-efficient is the most popular indicator used to measure the depth of inequality of a distribution and defined as the ratio between the area demarcated by the

diagonal and the Lorenz curve and the triangular region underneath the diagonal of the Lorenz plot.

Income receiver

A person who is 15 or more years aged and his or her calculated total monthly income received from any source is more than or equal to Rs.200 then he or she is defined as an income receiver in this survey.

Food Ratio

$$\text{Food ratio (\%)} = \frac{\text{Household expenditure on food and drink}}{\text{Total household expenditure (food and drink and non food)}} \times 100$$

Dependency ratio

In this survey, dependency ratio is defined as follows

$$\text{Dependency ratio} = \frac{\text{Persons aged less than 15 years and above 60 years}}{\text{Persons aged 15 – 59 years}}$$

1.7 Reliability of the estimates

As the actual sample which is based for this publication is limited to 5,442 households surveyed in first 3 months, the estimations given are mostly limited to residential sector level to preserve the reliability of them. However, after carefully considering the sizes of the standard errors, some of the Province level estimations are also been given.

Reliability statistics calculated for some of the estimations of most important variables of the survey are given below to build confidence among advanced data users and to support future sample design activities of similar type of surveys.

Table 1.3: Reliability statistics of selected variables - HIES 2012

Variable	Estimate	Standard error	Coefficient of variation (%)	95% confidence interval		Design effect
				Lower	Upper	
Household expenditure(Rs./month)	40887	821	2.01	39274	42500	1.40
Urban	59001	2730	4.63	53639	64362	1.47
Rural	37561	856	2.28	35879	39242	1.45
Estate	29779	1557	5.23	26721	32838	1.83
Household size (persons)	3.9	0.03	0.77	3.8	3.9	1.37
Urban	4.0	0.07	1.75	3.9	4.1	1.35
Rural	3.8	0.03	0.79	3.8	3.9	1.03
Estate	4.1	0.12	2.93	3.9	4.4	1.44
Household income (Rs./month)	46207	1304	2.82	43647	48768	1.35
Urban	68336	4160	6.09	60165	76506	1.36
Rural	42184	1386	3.29	39463	44906	1.39
Estate	31895	1859	5.83	28244	35546	1.54
Household population (millions)	20.2	0.16	0.79	19.90	20.50	0.39
Urban	3.6	0.06	1.67	3.4	3.7	0.34
Rural	15.7	0.15	0.96	15.4	16.0	0.31
Estate	0.9	0.03	3.33	0.9	1.0	0.36

2. Demographic Characteristics

Collecting information on demographic characteristics is necessary in national household surveys as it provides the base for the subject information be more meaningfully estimated at different levels of population characteristics such as sex, age, level of education, marital status, employment status etc. The information collected in the HIES are based on households in Sri Lanka and therefore the population estimations given in this section are of household population that excludes homeless population and people living in shelters other than the households such as military barracks, prisons, orphanages, and in other similar type of institutions.

2.1 Household population

The survey results reveal that female household population exceeds male household population in Sri Lanka. The female household population was 52.8 percent and the male population was 47.2 percent in 2012. There is a no broad change has taken place in male to female household population ratio since 2009/10 to 2012. However the statistics at the sector level show a small decline in growth of male population in both rural and estate sectors during this and the estate sector decline in male population growth is fairly higher than that of the rural sector.

According to survey results, the rural sector dominates the population by sharing 78 percent with 15.7 million persons. Yet the actual proportion and count of rural sector population at national level should be somewhat higher than the above estimation as the HIES 2009/10 covers only the Vavuniya district in the Northern province in which the higher majority of the population lives in the rural sector.

The urban sector and the estate sector population estimations in 2012 are 3.6 and 0.9 million respectively and the respective proportions are 17 percent and 5 percent (Figure 01).

Figure 2.1: Distribution of Household population by sector - 2012

The HIES and other household surveys select one member from usually living members of each household as the head of the household and therefore the number of households equals the number of heads of the households. Usually the head of the household is the main decision taker of the household as named and agreed by the rest of the members.

According to general cultural practices of the country, in most of the households, a male, usually the husband or the father of the family is selected as the head of the household and this situation is reflected in Table 2.2, which shows that male headed households occupy 77.4 percent of the total households in Sri Lanka.

Table 2.1: Household population by sex and sector - 2009 to 2012

Sector	2009/10*						2012					
	Population (in millions)			Percentage (%)			Population (in millions)			Percentage (%)		
	Total	Male	Female	Total	Male	Female	Total	Male	Female	Total	Male	Female
Sri Lanka	19.7	9.3	10.4	100	47.2	52.8	20.2	9.5	10.7	100	47.2	52.8
Urban	2.8	1.4	1.4	100	48.7	51.3	3.6	1.7	1.9	100	47.2	52.8
Rural	15.8	7.5	8.4	100	47.1	52.9	15.7	7.4	8.3	100	47.1	52.9
Estate	1.1	0.5	0.6	100	45.1	54.9	0.9	0.4	0.5	100	47.7	52.3

* Excluding Mannar, Kilinochchi and Mullaithivu districts in the Northern Province.

Table 2.2: Heads of households (total and percentage) by sex and sector-2012

Sector	Total count (thousands)			Percentage (%)		
	Total	Sex		Total	Sex	
		Male	Female		Male	Female
Sri Lanka	5215.6	4035.5	1180.1	100	77.4	22.6
Urban	891.0	685.7	205.3	100	77.0	23.0
Rural	4099.3	3179.9	919.4	100	77.6	22.4
Estate	225.3	169.9	55.4	100	75.4	24.6

2.2 Age composition

The age distribution of the population at national level is one of the most important factors that affect the social and economic development of the country. Age distribution described in this section is limited to 3 major age groups due to the limited size of the preliminary sample of the survey. According to table 2.3, which shows the percentage distributions of the household population by the 3 major age groups at

sector level, the highest population proportion in Sri Lanka is in the broad age group of 15 to 59 years (61.1%) and so are it in all the 3 sectors. The percentages of aging population (60 years and above) and adult population are low in estate sector than the other two sectors in Sri Lanka. Accordingly the percentage of child population (below 15 years) is high in the estate sector.

Table 2.3: Percentage distribution of population by selected age groups and sector - 2012

Sector	Age group (Years)			
	Total	0 - 14	15 - 59	60 and above
	(%)	(%)	(%)	(%)
Sri Lanka	100	25.7	61.1	13.3
Urban	100	24.2	61.0	14.8
Rural	100	25.8	61.2	13.0
Estate	100	28.6	59.1	12.3

Household living standard has a strong relationship with the characteristics of the head of the household. The HIES2012 has also found that 48.6% of the household heads are in the 40-59 years of age group. Among the

total household heads in the country, only 1.2 percent is less than 25 years old and in the estate sector it is about 1.4 percent.

Table 2.4: Percentage distribution of heads of the households by age group and sector-2012

Sector	Age group (years)				
	Total	Below 25	25 - 39	40 - 59	60 and above
	(%)	(%)	(%)	(%)	(%)
Sri Lanka	100	1.2	22.2	48.6	28.0
Urban	100	1.2	20.7	48.0	30.1
Rural	100	1.1	22.4	48.7	27.7
Estate	100	1.4	23.8	49.1	25.8

2.3 Educational attainment

As reported by the survey, the percentage distribution of five years and above aged population by the level of education is given in Table 2.5. The highest percentage of the pertinent population is reported to be in the group of grade 6 - 10 educational attainment group at national level (43.2%) and every sector confirms it. The last column of table 2.5 shows that 1 out of every two thousand persons of the total population is receiving or has attained in special education which is provided to children who suffers from mentally retarded conditions. The Table 2.5 also shows that the most educated

persons of the population choose to live in the urban sector as the urban sector holds the highest percentage (19.7%) of persons who have passed G. C. E (A/L) or higher level examination. In the estate sector only 2.1% has attained G. C. E. (A/L) and 12.1% has never attended in any school. Since 2 out of every 3 persons of the national population bear less than G. C. E. (O/L) qualifications, the contribution so far made by the national education system to the national development is also questioned by the table.

Table 2.5:Percentage distribution of the population (Age 5 years and above) by level of education and sector -2012							
Sector	Educational attainment						
	Total	No schooling	Up to grade 5	Passed grade 6-10	Passed GCE(O/L)	Passed GCE(A/L) and above	Attended/ attending to special education*
	(%)	(%)	(%)	(%)	(%)	(%)	(%)
Sri Lanka	100	4.0	24.4	43.2	16.3	12.0	0.05
Urban	100	2.6	19.5	37.6	20.5	19.7	0.1
Rural	100	3.9	24.5	44.8	15.9	10.9	0.04
Estate	100	12.1	41.6	38.7	5.6	2.1	-

* The education given to children who are unable or limited capabilities in carrying out activities due to disabilities

When we monitor the level of education of heads of the households at sector level, the estate sector shows the poorest educational attainment compared to the other two sectors. Majority of the household heads in the

estate sector (57.7%) falls in to the groups of who have attained only up to grade five level of education (44.5%) and among them about 13 percent has refrained from schooling.

Table 2.6: Percentage distribution of head of household by level of education and sector - 2012						
Sector	Level of education of head of the household					
	Total	No schooling	Up to Grade 5	Grade 6-10	Passed GCE(O/L)	Passed GCE(A/L) and above
	(%)	(%)	(%)	(%)	(%)	(%)
Sri Lanka	100	3.6	22.8	46.5	15.8	11.3
Urban	100	1.9	13.9	39.8	21.2	23.2
Rural	100	3.5	23.5	48.5	15.3	9.2
Estate	100	13.2	44.5	36.7	3.8	1.7

2.4 Marital status

Household income and expenditure survey collects information on the marital status of the persons who are 10 years and above aged and based on this, the percentage distribution of this population by the marital status is given in table 2.7. The survey reveals that 58.1

percent of this population has reported as married and about 32.5 percent has never married. Around 8 persons out of every hundred were recorded as widowed and only 1.8 percent reported either divorced or separated at national level in 2012.

Table 2.7: Percentage distribution of population (age 10 years and above) by marital status and sector - 2012

Sector	Marital status				
	Total (%)	Never married (%)	Married (%)	Widowed (%)	Divorced/ Separated (%)
Sri Lanka	100	32.5	58.1	7.6	1.8
Urban	100	33.1	57.2	8.0	1.7
Rural	100	32.5	58.2	7.5	1.8
Estate	100	29.8	59.8	8.8	1.6

The survey has also reveals that 15.7 percent of heads of the households in Sri Lanka are widows. However, the number of divorced and separated household heads is

not relatively high as more than 78 percent of the heads of the households in Sri Lanka are currently in a some sort of wedlock.

Table 2.8: Percentage distribution of the population of head of households (Age 10 years and above) by marital status and sector - 2012

Sector	Marital status				
	Total (%)	Never married (%)	Married (%)	Widowed (%)	Divorced/Separa ted (%)
Sri Lanka	100	2.4	78.9	15.7	3.0
Urban	100	2.8	78.9	14.8	3.6
Rural	100	2.4	79.0	15.8	2.8
Estate	100	2.1	77.2	16.6	4.0

2.5 Female headed households

Female-headed household is a household in which a female adult member is the one who is responsible for the care and organization of the household or she is selected as the head of the household by the other members of the household. The survey estimates that out of 5.2 million households, in Sri Lanka, 1.1 million

households or 23 percent of the households are female headed households. Table 2.9 shows that the age distribution of female heads of households and the survey has found that the majority of female heads of the households are in the age group of 40 - 59 years.

Table 2.9: Percentage distribution of female heads of households by age group and sector - 2012

Sector	Total	Age group		
		Less than 40	40 - 59	60 and above
	(%)	(%)	(%)	(%)
Sri Lanka	100	19.7	41.6	38.6
Urban	100	18.9	44.3	36.7
Rural	100	20.3	40.1	39.6
Estate	100	12.7	56.9	30.4

The survey confirms that among the total female heads of the households, in Sri Lanka, more than fifty percent are widows (Figure 02) and small percentage has reported as never married (4.0%).

Figure 2.2: Distribution of female heads of household by marital status -2012

According to the survey findings, figure 03 shows the distribution of level of education of female heads of the households in Sri Lanka. Among the female heads of the households, majority has attained a level between grade 6 to 10 and 7 percent has never attended in a school.

Figure 2.3: Distribution of female heads of household by level of education -2012

3. School Education

The school education is the affirmative characteristic in the education system in Sri Lanka. The enrolment ratio in primary education in 2010 was 90.2 percent according to the ministry of education. The HIES also collects information related to the school attendance from the persons who are in 5 to 20 years age cohort and the HIES 2012 has found that more than five-in-every six (more than 84 percent) children in this age group in urban and rural sectors in Sri Lanka are currently attending in schools while more than four –in every five in estate sector also do so. Within this population segment nearly around 4 in every 100 persons (4.2%) has never attended in a school and

almost 11 in every 100 children (11.0%) has left the school prematurely. However in this category dropout students from G.C.E O/L and A/L also have been included.

Primary education is compulsory for the children in the age group from 5 to 14 years old according to the education ordinance in Sri Lanka. So it is mandatory for a child to attend school until he is 14 years old. The survey reveals that out of 3.27 million children in 5-14 years aged group, 3.22 million children are currently attending in schools (98.6%), 0.7 percent have attended in past and 0.6 percent have never attended any school.

Table 3.1: Percentage distribution of population (aged 5 to 20 years) by school attendance status and sector - 2012

Sector	Total	School attendance		
		Currently attending	Never attended	Attended in past
	(%)	(%)	(%)	(%)
Sri Lanka	100	84.8	4.2	11.0
Urban	100	84.6	4.2	11.2
Rural	100	85.2	4.0	10.8
Estate	100	80.7	6.1	13.2

3.1 Distance to school

Table 3.2: Percentage distribution of currently school attending children (aged 5 - 20 years) by distance to school and sector - 2012

Sector	Total	Distance to school				
		Less than1 km	1-3km	3-5km	5-10km	10km and above
	(%)	(%)	(%)	(%)	(%)	(%)
Sri Lanka	100	26.3	32.4	16.6	14.0	10.7
Urban	100	27.9	35.9	15.3	10.3	10.5
Rural	100	25.5	32.0	16.6	15.1	10.8
Estate	100	33.0	28.8	22.0	8.1	8.1

Distance to school from the permanent residence is an influential factor in encouraging children to attend school and also to increase new admissions. Table 3.2 shows that nearly 2 out of every 3 school going children (58.7%) in Sri Lanka travel less than 3km to reach their

school. However more than 10% of the children travel more than 10 km distance to reach their preferred school. 33.0% of the estate sector children find their school within 1 km circle from their home.

3.2 Mode of travel to school

This survey has also collected the information about the mode of travel to school from the children who are currently attending school. The survey found that walking is the major mode of travel and 39% of the children walk to school. Nearly 21% of the children use common transportation modes such as private or public busses or trains to go to school.

3.3 Time taken to school

According to the main mode of travel used to go to school, survey recorded the time taken to go to school from the children who are attending school. Table 3.3 gives the information regarding the time spends to reach the school and it shows that one half of the children in Sri Lanka take less than 15 minutes to reach the school from the residence.

Figure 3.1: Distribution of currently school attending children by mode of travel to school – 2012

Table 3.3: Percentage distribution of currently schooling children (Aged 5 -20 years) by traveling time to school and sector – 2012

Sector	Total	Traveling time to school from house			
		15 min or less	16 -30 min	31 - 60 min	More than 60 min
	(%)	(%)	(%)	(%)	(%)
Sri Lanka	100	49.7	34.9	13.0	2.4
Urban	100	60.8	25.3	12.9	1.0
Rural	100	48.1	36.3	13.0	2.6
Estate	100	38.2	42.6	14.2	5.0

4. Health

In the health section of the HIES questionnaire, the health related information is collected from each and every person usually live in the surveyed households considering both the most reason one month and one year reference periods. One month (last month) reference period is considered to investigate persons visits to any of the government or private hospitals, medical centers or health centers to obtain treatments as out-patients and one year (last year) reference period is considered to record the treatments received after admitting to a hospital as in patients.

The survey reveals that 17.2 percent of the household population obtains health treatments at least ones in a month from the government hospitals and 14.5 percent from the private hospitals as out-patients. About 8.3 percent of all the household population has got treatments from the government hospitals and 1.0 percent from the private hospitals at least once in a year as admitted-in-patients. Out of the total household population in Sri Lanka, 14.1 percent of is suffering from at least one chronic illness or disability condition (See Table 4.1).

Table 4.1 Percentage distribution of household population by health status and sector – 2012

Sector	Health status of household population				
	Obtained outpatient health care at government hospital	Stayed at a government hospital as an inpatient	Obtained outpatient healthcare at private hospital	Stayed at a private hospital as an inpatient	Suffering from chronic illness/disability
	(%)	(%)	(%)	(%)	(%)
Sri Lanka	17.2	8.3	14.5	1.0	14.1
Urban	12.4	6.2	13.9	1.0	16.0
Rural	18.1	8.7	15.0	1.1	13.8
Estate	19.9	8.4	8.6	0.3	11.7

The survey finds the information related to the reason for visiting government and private hospitals as outpatients and the results are given in the Table 4.2 and 4.3. It indicates that as usual, majority has visited in both government and private hospitals to take treatment for illnesses. The distribution pattern of reasons to visit hospital does not show much difference between the government and private hospitals at national level. In relation to the information collected regarding the reason for visiting a hospital from the persons who had

obtained any treatments as outpatients, nearly 82 percent has visited the government hospital to obtain treatments for illnesses and about 8 percent for medical tests or for a consultation (see Table 4.2). Also nearly 85 percent among such visitors has visited to private hospital to obtain treatments for illnesses and about 6 percent reported for medical tests or for a consultation (see Table 4.3).

Table 4.2: Percentage distribution of patients obtained treatment from government hospital as outpatients by the reason for visiting and sector – 2012

Sector	Total	Reason for visiting government hospitals as an out patient					
		Treatments for illness	Treatments for injury	Medical tests/ consultations	Preventive injection	Infection	Other
	(%)	(%)	(%)	(%)	(%)	(%)	(%)
Sri Lanka	100	82.5	4.4	8.0	1.4	0.6	3.1

5. Income

The Household Income and Expenditure Survey (HIES) defines the household income as the total income received from all the sources by all the members of the household, either in cash (monetary income) or in kind (non-monetary income). The household income is investigated under 7 main sources categories in the survey questionnaire; wages and salaries, agricultural activities of both seasonal and non-seasonal crops, non-agricultural activities, other regular cash receipts such as pensions, dividends and rents, interest amounts received from various types of savings, current remittances and local and foreign transfers and irregular gains or windfall income such as compensations, lottery wins etc. The income in kind is mostly the estimated values of the household consumed items such as home grown fruits and vegetables, firewood collected etc. The estimated rental values of owner occupied housing units gathered in the consumption expenditure section of the survey questionnaire is also a part of the income-in-kind.

Obtaining income information from individuals and households is a difficult task as many reluctant or forget to disclose many of them and often under report. Therefore to ease the field work, which is the most challenging activity of the survey, and to gather more accurate and reliable data, income information of the household members were collected individually under the six income sections tactically arranged in the HIES questionnaire. Apart from that, an extra column has also been added at household level in the expenditure section to record estimated values of household consumed goods and services received fully or partly free of charge or purchased on price concessions. This information of income in-kind along with the monetary income collected in the six income sections are aggregated and summarized in order to estimate, average monthly household income (mean income), median income, per capita income, income receivers' income and various other indexes such as, Gini coefficients, shares of income etc. at many different geographic and social domain levels.

5.1 Household Income

The mean (average) and median income is the prime statistic used to compare income values reported in different domains over time and between. Mean household income is the value obtained by dividing the total aggregated household income by total number of households in a domain or in an area. Median income is the income value at which the income distribution is divided into two equal size groups. This middle point or

the median is important as always the income of one half of the population falls either above or below that value and the median income is a better indicator than the mean (average) income as the median is not much affected by extreme or unusually high or low values. However both the mean and median are based on all the households in the population.

The survey results revealed that the mean monthly household income in Sri Lanka was Rs. 46,207 in 2012. The highest mean monthly income value reported from the urban sector (Rs. 68,336) and the lowest value reported from the estate sector (Rs. 31,895). Table 5.1 shows that the median monthly household income in Sri Lanka was Rs. 30,400 in 2012, which means one half of the households in the country received more than Rs. 30,400 per month per household in 2012. When the provinces are compared, the Western province which reported the highest average monthly household income which is Rs.64,944 and nearly more than two times higher than the values reported by the Eastern province which reported the lowest values for both the median and the mean household income.

Table 5.1: Household income (mean and median monthly) and household size by sector and province - 2012

Sector/Province	Mean	Median	Household Size
	Rs.	Rs.	Persons
Sri Lanka	46,207	30,400	3.9
Urban	68,336	41,958	4.0
Rural	42,184	28,921	3.8

Northern	37503	23250	3.9
Eastern	28,113	21,688	4.1
North western	46,253	27,679	3.7
North Central	35,771	27,839	3.8
Uva	40,644	25,150	3.7
Sabaragamuwa	36,379	27,800	3.7

Figure 5.1: Mean and median of monthly household income by sector - 2012

In addition to the median value, decile groups also ease the understanding about an income distribution, particularly the inequality of the distribution. The boundary values of the decile groups break a distribution into 10 equal size groups and the first decile holds the population 10 percent to which the lowest values of the distribution are attributed. Hence, to obtain the range values of the household income deciles, all the households are arranged in ascending order of the income and divided into 10 equal size groups. Table 5.2 and 5.3 shows the mean and median household income values reported within the national and sector level household income deciles respectively.

Table 5.2 : Mean and median household income by household income decile - 2012			
Decile group	Range (Rs.)	Mean (Rs.)	Median (Rs.)
All groups		46,207	30,400
1	less than 10750	6,499	6,813
2	10750 - 16162	13,635	13,650
3	16163 - 20600	18,468	18,471
4	20601 - 25467	23,083	23,126
5	25468 - 30400	27,872	27,748
6	30401 - 36576	33,377	33,264
7	36577 - 45325	40,714	40,700
8	45326 - 57499	51,147	51,050
9	57500 - 86000	68,681	66,767
10	More than 86000	178,709	126,868

The point to note here is that the median equals the upper boundary of the fifth decile group in any distribution by definition and upper boundaries of the other deciles groups mark the breaking points of the respective groups. In most of the income distributions the mean or the average falls beyond the median, resulting positively skewed distributions and the household income distributions at national and sector levels shown in tables 5.2 and 5.3 are live illustrations for a typical income distribution.

The distributions of shares of income of deciles to total household income at each sector and at the national level as well show a similar pattern (Table 5.4). The 10th decile groups in all the sectors and whole country hold very high shares of household income and the corresponding figures for urban, rural and estate sectors are 41.6 percent, 37.0 percent and 29.2 percent respectively.

Table 5.5 shows the household shares and income shares of the national household income deciles to total number of households and total income respectively at national and sector levels. According to the Table 5.5, 18.2 percent of the urban sector households that received 54.2 percent of the total urban sector household income fall in the tenth national decile group in which all the households in this decile received over Rs. 86000 monthly per household. On the other hand when the table 5.5 is carefully examined, it also shows that 50 percent of the estate sector households were among the poorest 40 percent households of the country in 2012 and their contribution to the total household income of the estate sector was 24 percent.

5.2 Inequality of income

Table 5.6: percentage share of income received by poorest to richest households by sector - 2012

Sector	Share of income			
	Richest 20%	Poorest 20%	Middle 60%	Poorest 40%
	(%)	(%)	(%)	(%)
Sri Lanka	53.5	4.4	42.1	13.3
Urban	56.4	4.2	39.5	12.3
Rural	51.9	4.5	43.6	14.0
Estate	45.3	5.5	49.2	16.5

The simplest but a popular way to understand the income inequalities is dividing the population into income quintiles and analyzing the proportions of income calculated at each quintile from poorest to richest. A national household income quintile represents 20% or one fifth of the total households in Sri Lanka. The bottom or the fifth quintile holds the richest 20% households, the top or the first is for the poorest 20% and the 60% from second to fourth quintiles are considered as middle income group. The figure 5.2 shows the share of household income by household income quintiles in Sri Lanka. Table 5.6 shows the percentage share of income received by poorest to richest households by sector in Sri Lanka. It reveals that the poorest 40 percent was receiving nearly 13.3 percent of total household income of Sri Lanka.

It is shown in Figure 5.2 that the richest 20 percent (9th and 10th decile groups) was receiving nearly 53.5 percent of the total household income of Sri Lanka while the poorest 20 percent (1st and 2nd decile groups) was receiving only 4.4 percent. When the middle

60percent (3rd to 8th decile groups) or the middle three quintiles are considered, the corresponding figure was 42.1 percent.

Figure 5.2: Share of household income by household income quintiles – 2012

5.2.1. Gini coefficient

Gini coefficient (Gini) is one of the widely used indicators to measure the depth of inequality of an income distribution. The Gini is based on the Lorenz curve which plots cumulative percentage of the total income of the population in y axis and cumulative percentage of the households in x axis. The Gini can take values between zero and one and the line drawn at 45 degrees or the diagonal of the Lorenz curve represents a distribution with zero Gini value which indicates perfectly equal or zero level of inequity of the distribution. The Lorenz curve shown in Figure 5.3 is based on the monthly household income values reported in HIES 2012. The survey results revealed that the Gini of the household income in Sri Lanka is 0.48 with urban, rural and estate sectors reporting 0.51, 0.47 and 0.39 for Gini values respectively.

Table 5.7 presents the Gini coefficients of household income, per capita income and income receiver's income by sectors and by provinces. When the sectors are

compared, both the Gini coefficients of household income and per-capita income take the lowest values in the estate sector. Gini values of household, per-capita and income receivers' income are high in Northern province. The North Central province shows the lowest household income inequality with 0.39 of Gini.

Figure 5.3: Lorenz curve for household income distribution – 2012

Table 5.7: Gini coefficients of household income, per capita income and income receiver's income by sectors and by province - 2012

Sector and Province	Gini coefficient of Household income	Gini coefficient of Per capita income	Gini coefficient of Income receiver's income

5.2.2 Household size

Number of persons, including boarders and servants usually live in a household is the definition given for the household size. According to the survey the mean household size in Sri Lanka has come down to 3.9 persons per household in 2012. Table 5.8 shows that the household size gradually increases from about 2.8 persons to about 4.5 persons with the increase of the household income across the first to tenth decile group in Sri Lanka and in all the sectors as well.

5.3 Per capita income

Per capita income is frequently used as a better indicator to understand and compare the country's standard of living over time periods. Per capita income in a domain is calculated by dividing the estimated total household income by the estimated number of household population in the domain and is also used to measure and compare the wealth status between domains. According to the Table 5.10, which shows the mean and median monthly per-capita income of the country by sector and province levels in 2012, the mean monthly per capita income at national level was Rs. 11,932 and the median was Rs. 7,871.

Table 5.10: Mean and median monthly per capita income by sector and by province - 2012

Sector and province	Mean (Rs.)	Median (Rs.)
Sri Lanka	11932	7871
Urban	17150	10167
Rural	11003	7617
Estate	7719	6047
Western	16360	10424
Central	9613	7018
Southern	11065	7557
Northern	9533	6071
Eastern	6871	5266
North Western	12476	7616
North Central	9546	7339
Uva	10998	6772
Sabaragamuwa	9726	7414

The Table 5.9 displays the distributions of per capita income by national and sector level per capita income decile groups. The decile mean values indicate the high positive skewedness of the per-capita income distribution and according to the decile range values, more than seventy percent of the total population receives per-capita income less than the value of the national mean per-capita income (Rs. 11,932). Further comparisons show that the mean income of the richest ten percent of the population is nearly twenty two times higher than that of the poorest ten percent. The urban and rural sectors also shows a similar pattern of high inequality between the rich and the poor but in the estate sector, the per capita income distribution shows the least inequality of the per capita income with relatively narrow distance between the mean and the median, confirming the lowest Gini value among the sectors, reported in table 5.7. However the richest 20 percent of the total population in Sri Lanka shared nearly 53 percent of the total household income in 2012.

Figure 5.3: Share of per capita income - 2012

According to the survey findings, table 5.9 presents the mean and median monthly per capita income values by per capita income decile groups and adds to the knowledge that the poorest 5% persons of Sri Lanka in 2012 received less than Rs. 2,220 monthly which is indicated by the median value of the first per capita income decile. When the per capita income deciles are considered in the table 5.11 the household size goes down from 4.1 to 3.3 as it moves from poorest to richest income groups.

Table 5.11: Mean monthly per capita income, household size and share of income by national monthly per capita income decile - 2012

Decile group	Per capita Income range (Rs.)	Mean income (Rs.)	Household size (Persons)	Share of income (%)

8	11351-14792	12914	3.6	10.8
9	14793-22000	17833	3.4	14.9
10	More than 22000	45686	3.3	38.3

5.4 Income receiver's income

In order to obtain the Income receiver's income, the HIES records the household income, received from all the sources, by source and person. The Income receiver's income is the sum of the income values recorded in each income section arranged according to the income source in the survey questionnaire. If a person is less than 15 years old or his aggregated total monthly income is less than Rs. 250, then he was not defined as an income receiver by the HIES 2012 and

such income values were added to the income of the heads of the respective households. It is evident that the household income is accordingly construct on the income of the income receivers in the household and thus the total household income of the country is equal to the sum of the income values recorded at all of the source sections of the survey questionnaire by the total income receivers in the country.

Figure 5.4: Average number of income receivers per household by sector and province - 2012

According to figure 5.4, average number of income receivers per household in Sri Lanka was 1.8 persons in 2012 and it has remained unchanged since the HIES 2006/07. Further description at the province level added that the lowest average number of income receivers per household was reported from the Eastern province (1.6), the highest was from the Western and central provinces (1.9) and the other provinces are not significantly away from 1.7 persons per household.

Table 5.14: Mean and median monthly Income receiver's income by sector and by province - 2012

Sector and province	Income receiver's income	
	Mean (Rs.)	Median (Rs.)
Sri Lanka	25778	16210

The separate analysis of the income receiver's income of the survey reports that the average monthly income receiver's income and median income for the

country in 2012 was Rs. 25,778 and Rs. 16,210 respectively. Table 5.14 says that the mean income of the monthly income receiver's income reported by the urban sector is nearly two times higher than those reported by the estate sector. When the Income receiver's income reported in the household income decile groups are considered, in Table 5.13, it shows that the higher the number of income receivers higher the household income.

Table 5.17 shows the income receiver's income share to total household income by monthly income receiver's income deciles made at sector levels and national level. When the national monthly income receiver's income deciles are considered in the analysis, it shows that an income receiver in the lowest decile which shared just 0.6 percent to the total income, received less than Rs. 3200 while every income receiver in the highest decile received more than Rs. 47,739 per month sharing massive 42.5 percent of the total income within.

The Gini coefficient values and the summaries of the shares of income of income receivers are shown in table 5.15 and table 5.17 respectively. However there were large differences between the shares of income of poor and rich groups in each and every sector confirming the prevailing high inequalities indicated by the high Gini values reported within the country and within all the sectors in 2012. The share of income of income receivers in the lowest two income receiver's income decile groups or the poorest 20% income receivers was only 2.5 per cent to total income of the country but the income receivers in the last two deciles or richest 20% of the income receivers shared by 57.4 percent. The poorest to richest decile ratio is comparatively low in the estate sector and the poorest 20 percent of income receivers shared the total estate sector household income 3.9 percent which is the highest share when compared to the other two sectors.

Table 5.15: Gini coefficient and income share of income receiver's by sector - 2012

Sector	Gini coefficient	Income share of income receiver's		
		Poorest 20 % (%)	Middle 60% (%)	Richest 20% (%)

5.5 Source of income

The income is received in two main types, either in cash or in kind or in other words monetary and non-monetary and the monetary income includes the receipts of funds transferred through bank drafts and modern electronic means as well. Wages and salaries earned by direct employees, Profits from agricultural and non-agricultural activities, other cash receipts such as pensions, aids, Samurdhi, local and foreign transfers and windfall income such as lottery wins, compensations etc. are identified as monetary income. The non-monetary income is the estimated value of goods and services received in kind and consumed within the survey reference period. This value is formed by home grown fruits and vegetables, firewood, home consumed quantities of the products of agricultural activities, and other goods or concession values received on consumption of goods and services provided by employers or other related parties. Estimated rental value of owner occupied housing units or of freely occupied housing units is also treated as a part of the non-monetary income of the households.

The survey revealed that 85.7 percent of the total household income of the country was received as monetary income in 2012 and it was Rs 39,584 out of Rs. 46,208 on average at national household level. The major part of the monetary income, on average Rs. 16,031 or 34.7 percent of the total household income is sourced from wages and salaries.

The income from agricultural activities is the least contributor among the employment categories. The employment income, in addition to the wages and salaries earned by employees, includes income gained by employers and own account workers engaged in both agricultural and non-agricultural sectors in the country (Table 5.18). The estate sector shows the highest proportion (54.0%) of household income received as wages and salaries alone and recorded the lowest proportion received from other sources of employment income.

Figure 5.5: National distribution of household income by source of income - 2012

5.6 Income distribution by characteristics of household head

The HIES shows that the household income, per-capita income and the income receiver's income in Sri Lanka has a very high positive correlation with educational attainment. The income summarized at different educational attainment groups clearly shows that the higher the educational attainment higher the income as graphically shown by Figure 5.6 and 5.7 which confirms the rise of both mean and median household income in

the groups arranged according to the level of education of heads of the households in the respective groups.

The figures also show how the level of education significantly enhances the potential of earnings of households. If a household head has a higher level of education then the household is more likely to have a higher income.

Figure 5.6: Mean household income by educational attainment of household head-2012

Figure 5.7: Median household income by educational attainment of household head-2012

Figure 5.7 shows that, according to the characteristics of the median, 50 percent of the households that headed by a GCE (O/L) or higher examination passed person, receives an income more than or equal to the average household income of the country and 50 percent of the

degree holder headed households received beyond Rs. 83,000 monthly in 2012. Further survey reveal that fifty percent of the household heads who never attended school receive less than Rs. 25,150 income per month.

Sri Lanka is among the countries that report very high level of gender equality, according to the many recent international and local studies and the HIES 2012 data also support the finding by reporting no significant gender inequality in terms of household income

reported between male and female headed households. However the effect of the level of education of the head of the household on household income is highlighted for both the sexes as shown by Figure 5.8.

Figure 5.8: Mean household Income by sex of household head and educational attainment-2012

Figure 5.9: Mean household Income by sex of household head and income group -2012

Figure 5.9 shows the results of an investigation made for any gender inequality among different household income levels from rich to poor in terms of household income and finds perfectly similar distributions of mean household income reported at every household income deciles by both the male headed and female headed households. However it should be noted that, according to the definition of household head, all the 23 percent of

households headed by female heads are not totally depend on income generated by females and there are many households that identify a female as the head as the responsible male is living away from the household due to economic reasons.

6. Expenditure

Expenditure data referred to consumption expenditure incurred by all the persons in surveyed households. Generally all the expenditure incurred by the household during an item specific reference period is collected under the following three sub sections of the survey questionnaire.

1. Expenditure on food
(Included boarders and domestic servants food)
2. Expenditure on non-food.
(Excluded boarders and servants non-food)
3. Expenditure incurred by boarders and domestic servants
(Non-food expenditure and food purchased and consumed outside the household)

In order to obtain accurate data, the first two sections have been divided into 35 sub categories. There are 19 sub categories, such as cereals, prepared foods, pulses, vegetables, fish, meat etc. under the section of expenditure on food. Expenditure on non-food items has been divided into 16 sub-groups, such as housing, fuel and light, durable goods, health and personal care expenses etc.

Under the food expenditure, information was gathered within the 7 consecutive days of the survey week starting from Monday to Sunday to get complete household consumption. For each day number of persons present for meals and consumption quantities and values for each and every consumed food items within the household or purchased and consumed outside the household were reported. Home grown and received-free food items were estimated according to the local market value. Initially this information was recorded in a separate form (food diary) by respondent households on a daily basis.

Considering the non-food expenditure, the amount spent for each item by each member of the household under the given reference period was recorded. This reference period varies from one month to twelve months period depending on the frequency of purchasing of items according to the pattern of consumer behaviour i.e. one month for expenditure on housing, fuel and light, health and personal care expenses; six months for expenditure on clothing and foot wear; twelve months for durable goods etc.

Personal expenditure on boarders and domestic servants who usually live in the household is also reported in the relevant section of the schedule. It is to be noted that the values of purchased non-food items and services incurred during the reference period were added in this section. Considering the local market prices, the estimated values of non-food items received free of charge and balance price of the items received at concession prices are also included

The enumerators were advised to make three visits to households and guide the respondents to carry out these activities in accurate manner. Soon after getting the information from the household, it is corrected where necessary and entered into the main survey schedule by the enumerator.

6.1 Household expenditure

Table 6.1: Average monthly household expenditure and household size by sector and by province - 2012

Sector and	Mean household expenditure	Mean household Size
Province	(Rs.)	(persons)
Sri Lanka	40887	3.9
Sector		
Urban	59001	4.0
Rural	37561	3.8
Estate	29779	4.1
Province		
Western	59117	4.0
Central	35940	4.0
Southern	37452	3.8
Northern	35282	3.9
Eastern	28868	4.1
North-western	34446	3.7
North-central	32497	3.8
Uva	30664	3.7
Sabaragamuwa	31540	3.7

The survey results reveal that the average monthly total household expenditure for both food and drink and non-food items is Rs. 40,887 for Sri Lanka in 2012. When it is disaggregated at residential sectors, monthly household expenditure in urban sector is Rs. 59,001,

rural sector is Rs.37,561 and 29,779 in estate sector on average (Table 6.1). It depicts that an average household in urban sector spends approximately Rs. 30,000 more per month than the estate sector. The Table 6.1 also shows the household size in each sector and province. Eastern province indicates the largest household size and yet the lowest household monthly

expenditure in 2012. Among the provinces in Sri Lanka, the highest mean monthly household expenditure is reported from the Western province (Rs59,117). The mean household expenditure reported by all the provinces other than the Western province is below the national mean.

Considering the table 6.2, the average monthly expenditure of a household in the tenth expenditure decile group (Rs. 130,001) is approximately twelve times greater than that of the first decile group (Rs. 10,232). Similar pattern could be seen in urban and

rural sectors as well. But in estate sector, the variation in mean expenditure among the deciles is not as high as the other two sectors. This feature is graphically shown in the following figure 6.1.

Figure 6.1: Average monthly household expenditure by expenditure decile and Sector – 2012

Table 6.3: Share of household expenditure by household expenditure decile and sector - 2012

10	More than 76949	31.8	More than 103075	33.2	More than 70811	30.6	More than 51696	23.2

According to table 6.3, the expenditure shared among deciles, Sri Lanka and all three sectors show fairly a similar distribution pattern. However when the total

share of first five deciles are compared, one half of the estate sector households share 29% while it is just 23% and 24 % in urban and estate sectors respectively.

Table 6.4: Household size and percentage of households by national household expenditure decile – 2012

3	18134 - 21581	10	5.0	11.0	11.1	3.5	3.0	3.6	3.6
4	21582 - 25449	10	6.8	10.6	11.8	3.7	3.3	3.7	3.9
5	25450 - 30051	10	7.9	10.3	12.6	4.1	3.7	4.1	4.5
6	30052 - 35365	10	9.4	10.1	10.9	4.1	3.9	4.1	4.9
7	35366 - 42427	10	11.7	9.6	9.8	4.3	4.2	4.3	5.0
8	42428 - 53116	10	14.3	9.2	8.3	4.4	4.4	4.4	5.7
9	53117 - 76949	10	16.5	8.7	7.9	4.5	4.5	4.4	6.0
10	More than 76949	10	19.7	8.4	1.3	4.5	4.5	4.5	4.5

According to Table 6.4, household size increases with household expenditure in all the sectors. Considering the sector percentage proportions of households fall in national household expenditure deciles, the tenth decile group contains 19.7 percent of the urban households

which is the highest proportion among sectors. The relevant proportions for the rural and the estate sectors are relatively low (8.4% and 1.3% respectively) confirming with the high sector disparity exists in the country in terms of the household expenditure as well.

Figure 6.2: Lorenz curve for household expenditure - 2012

Gini coefficient of household expenditure in Sri Lanka is reported as 0.40 and the Gini coefficient of per-capita expenditure is 0.39 in 2012.(see Table 6.5)

Table 6.5: Gini coefficient of household expenditure and per capita expenditure by sector – 2012

Sector	Gini Coefficient	
	Household expenditure	Per capita expenditure
Sri Lanka	0.40	0.39
Urban	0.41	0.41
Rural	0.39	0.37
Estate	0.31	0.26

When the sectors are considered, the lowest value for the Gini coefficient of household expenditure is reported in estate sector (0.31). This nature of very low inequity within the sectors can be seen for the per capita expenditure as well. This reflects the less inequity in consumption distribution among the households and people in estate sector than in the other two sectors.

6.2 Food ratio

$$\text{Food Ratio} = \frac{\text{Expenditure on food and drink}}{\text{Total expenditure (food and drink and non-food)}} \times 100$$

The food ratio is one of the principal indicators use to measure living standards of a population. The proportion of expenditure on food and drink to total expenditure is called the food ratio and it is generally given as a percentage.

The survey results reveal that the total average monthly household expenditure for both food and drink and non food was Rs. 40,887 in Sri Lanka in 2012 (Table 6.6). Out of that, an amount of Rs. 15,358 has been spent on food and drink by a household on average. Hence the computed food ratio is 37.6 percent for Sri Lanka in 2012. The computed food ratios for urban, rural and estate sectors are 31.4 percent 39.1 percent and 49.6 percent respectively.

Figure 6.2: Food ratio by province - 2012

Table 6.6: Average monthly household expenditure on food and non food items by sector and by province - 2012

Sector and	Average household expenditure	Average Expenditure on food & drink	Food ratio	Average Expenditure on non-food items	Non food ratio
Province	(Rs.)	(Rs.)	(%)	(Rs.)	(%)
Sri Lanka	40887	15358	37.6	25529	62.4
Sector					
Urban	59001	18513	31.4	40487	68.6
Rural	37561	14704	39.1	22857	60.9
Estate	29779	14779	49.6	15000	50.4
Province					
Western	59117	18070	30.6	41047	69.4
Central	35940	14790	41.2	21149	58.8
Southern	37452	14155	37.8	23297	62.2
Northern	35282	15796	44.8	19486	55.2
Eastern	28868	15872	55.0	12996	45.0
North-western	34446	14218	41.3	20227	58.7
North-central	32497	13348	41.1	19149	58.9
Uva	30664	12781	41.7	17883	58.3
Sabaragamuwa	31540	13637	43.2	17903	56.8

According to the food ratios calculated for each province, the Western province shows the lowest value (30.6 percent). The highest Food ratio is reported from the Eastern province amounting to 55 percent (Figure 6.2). So it is clear that those who live in the Western province spend more on non-food such as housing, education, transport, health, clothing, and

entertainments etc. than that of the households in rest of the provinces. Table 6.7 displays the food ratios of national monthly household expenditure deciles and it shows that the food ratios of the first 8 deciles are higher than the national level of 37.6 percent and first 5 deciles reports the food ratio above 50 percent.

Table 6.7: Average monthly household expenditure on food and drink, and non food items by national household expenditure decile - 2012

6	30401 - 36576	33377	15693	47.0
7	36577 - 45325	40714	16405	40.3
8	45326 - 57499	51147	17032	33.3
9	57500 - 86000	68681	20084	29.2
10	More than 1733471	178709	22672	12.7

Table 6.8 shows the relationship between household income and household expenditure on food and drink using the national household income deciles. It shows that average food and drink expenditure of the first decile group (poorest 10 percent) has exceeded the income by 52.6 percent and the first 5 household deciles

or lower income receiving 50 percent of the households spent more than 50 percent of their total income for food and drink on average. But the expenditure on food and drink of the richest 10 percent of the households (10th decile group) is only 12.7 percent of their total income. This feature is clearly depicted by figure 6.4.

Figure 6.4: Expenditure on food and drink as a percentage of income by national household income decile - 2012

Table 6.9: Average monthly household income and expenditure by national household expenditure decile – 2012

Decile group	Expenditure range	Average income (Rs.)	Expenditure on Food & Drink		Expenditure on non food	
	(Rs.)		(Rs.)	as a % of income	(Rs.)	as a % of income
All Groups		46207	15358	33.2	24791	53.7
1	Less than 13788	15346	6484	42.3	3474	22.6
2	13788 - 18133	20996	9453	45.0	6063	28.9
3	18134 - 21581	26650	11181	42.0	8184	30.7
4	21582 - 25449	27493	12729	46.3	10125	36.8
5	25450 - 30051	34652	14201	41.0	12729	36.7
6	30052 - 35365	36580	16083	44.0	15577	42.6
7	35366 - 42427	49842	17510	35.1	20535	41.2
8	42428 - 53116	52243	19434	37.2	26985	51.7
9	53117 - 76949	71043	21489	30.2	40290	56.7
10	More than 76949	127372	25042	19.7	104057	81.7

According to table 6.9 and figure 6.5 below, it is clear that when the household's expenditure increases then the share of expenditure out of the household income

for non food items also increases. But the relevant share for food and drink remains fairly same up to sixth expenditure decile and beyond that it starts to decrease.

Figure 6.5: Average monthly household expenditure as a percentage to average income by national household expenditure decile – 2012

6.4 Food consumption

Table 6.10: Average monthly household expenditure (Rs.) by major food category and sector – 2012

Major food category	Sri Lanka (Rs.)	Sector		
		Urban (Rs.)	Rural (Rs.)	Estate (Rs.)
All food items	15358	18513	14704	14779
Cereals	2509	2237	2484	4055
Prepared foods	1817	3213	1565	879
Pulses	527	507	520	745
Vegetables	1220	1268	1212	1176
Meat	681	1110	591	622
Fish	1418	2072	1322	573
Dried fish	610	538	638	387
Coconuts	794	814	794	720
Condiments	1351	1395	1341	1353
Milk and milk foods	1441	1957	1328	1449
Fats and oils	357	313	360	473
Sugar, Juggery, Treacle	474	487	472	475
Fruits	513	671	492	274
Other food items	1645	1931	1585	1598

Considering the household food consumption quantities and expenditure values reported in the survey, rice, wheat flour and bread have been favorite main food items consumed in households in Sri Lanka (Table 6.10). Thus cereals (rice, wheat flour etc.), and prepared food (bread, buns, hoppers etc.) are the two major

groups, on which the highest proportions of the total food expenditure are spent (Figure 6.6). The urban sector spent more on prepared food than the cereals whereas the estate sector spends little on prepared food and almost one third of their total food expenditure on cereals.

Table 6.11: Average monthly household expenditure (%) by major food category and sector – 2012

Major food category	Sri Lanka (%)	Sector		
		Urban (%)	Rural (%)	Estate (%)
All food items	100.0	100.0	100.0	100.0
Cereals	16.3	12.1	16.9	27.4
Prepared foods	11.8	17.4	10.6	5.9
Pluses	3.4	2.7	3.5	5.0
Vegetables	7.9	6.8	8.2	8.0
Meat	4.4	6.0	4.0	4.2

Dried fish	4.0	2.9	4.3	2.6
Coconuts	5.2	4.4	5.4	4.9
Condiments	8.8	7.5	9.1	9.2
Milk & milk foods	9.4	10.6	9.0	9.8
Fats and oil	2.3	1.7	2.4	3.2
Sugar, Juggery, Treacle	3.1	2.6	3.2	3.2
Fruits	3.3	3.6	3.3	1.9
Other food items	10.7	10.4	10.8	10.8

Table 6.11 shows the percentage distribution of average monthly household expenditure on major food categories given in table 6.10. According to the table 6.11 households in estate sector have spent 27.4 percent of total expenditure for cereals. Households in rural and estate sectors have spent relatively larger amount on cereals whereas those in urban sector have not. They have spent more on prepared foods (17.4 percent of total expenditure). The rural sector and the estate sector consider condiments as an important part of their food and it is the fourth largest food category for both the estate and the rural sectors.

The urban sector households spent more on milk and milk foods than the condiments and the most important finding is their expenditure on fish and meat. When taken together (17.2%) it exceeds the cereals (12.1%) and the prepared foods (17.4 %) is the highest expenditure group for the urban sector. Table 6.12 gives expenditure values and their quantities of some selected food items by sector. The consumption pattern of selected food items such as rice, wheat flour, bread, fresh fish and meat varies from sector to sector. When sectors are compared, it can be seen that the households in estate sector consume more wheat flour, rice (Nadu) and cow milk than those in other two sectors. On the other hand households in the urban sector consume more bread, rice (Samba), chicken, beef, and fresh fish than those in other two sectors. Households in rural

sector consume more rice (Kekulu), Sprats (dried), and coconut than those in other two sectors.

Figure 6.6: Average household expenditure (% of total food expenditure) by food item group - 2012

6.5 Non-food expenditure

Table 6.13 and 6.14 show the distribution on average monthly household expenditure on major non food items and their respective percentages. According to the table 6.13, monthly average non food expenditure per household is Rs. 25,529. The survey results indicate that the average monthly household expenditure on liquor, narcotic drugs and tobacco is Rs. 738 and it is about 2.9 percent of the total expenditure (Table 6.14). Since the respondent households do not disclose the true details on liquor, narcotic drugs and tobacco consumption and expenditure and not every member of the households are separately interviewed in household surveys, the corresponding values may be higher than what was revealed.

As usually reported by the HIES, among major non food expenditure groups, expenditure on housing is the highest non-food expenditure group in Sri Lanka (figure 6.7). It is to be noted that the estimated rental value of

owner occupied housing units, housing units occupied without paying any rental fee are also included in this group. The share of expenditure out of the total non food expenditure on housing is 17.8 percent. The mean expenditure on transport is reported as Rs. 3,607 (14.1%) and it records the third highest amount for non food expenditure among the major non-food categories. This feature can be seen in rural sector as well but an average household in estate sector spends more on transport than housing. Other miscellaneous expenses and other occasional expenses categories largely contain the expenditure on social activities, family functions such as weddings, funerals, payment of debts, construction or renewal of part of the houses, savings, donations made during the one year (last year) reference period. Thus it reports relatively higher monthly value than the other major non-food expenditure groups.

Table 6.13: Average monthly household expenditure (Rs.) by major non-food category and sector – 2012

6.6 Poverty

The HIES has been the main data provider for calculating and determining both poverty and poverty lines of the country for over 3 decades and the Official Poverty Line (OPL) which is currently in use for measuring the poverty status of the country was also determined on the data collected by the HIES 2002 in 2004. The OPL of Sri Lanka is an absolute poverty line constructed using the Cost of Basic Needs (CBN) approach and the bundle of basic needs determined as identified in year 2002 is the nutritional anchor used to evaluate the human development effectively over time. The value of the OPL is the minimum expenditure value required to be met by a person to come out of poverty and the units of the OPL are called as Rs. total (food and non-food) real expenditure per capita.

The term 'real' is used in the units of the OPL as the value of the OPL is updated over time by a price index (Colombo Consumer Price Index) for inflation of prices and a spatial price index is also used to adjust prices or expenditure values reported over regions (districts).

The basic but most widely used measurement of the poverty is Head Count Ratio (HCR) which simply indicates the proportion of poor population in a domain or count of persons below the poverty line as a percentage of the total population in the domain.

The table 6.15 presents the national and sector level movements of the HCR over last 2 decades.

Table 6.15: Poverty head count ratio (%) by sector and survey period - 1995/96 – 2012

Table 6.15: Poverty head count ratio (%) by sector and survey period - 1995/96 – 2012						
Sector	HIES survey period and poverty HCR (%)

Estate	20.5	38.4	30.0	32.0	11.4	6.2

7. Housing Characteristics

Household income and expenditure survey collects comprehensive housing information of all occupied households selected in the sample for the survey starting from HIES 2006/07. The estimated total number of households in Sri Lanka is 5.2 million in 2012 recalling that the HIES 2012/13 covered all the districts.

7.1 Housing unit structure

There are 10 types of housing unit structures have been identified and defined by the HIES 2012. The ten basic types are single houses of Single storied, two storied and more than two storied, Condominiums or Luxury apartments, flats, attached or annexed, line rooms or row houses, slums or shanties and others not explained by any of the above types and the 5 types of housing structures as shown in Figure 7.1.

Table 7.1 indicates the percentage distribution of households by the type of the structure of the housing unit and sector. With respect to the table nearly 91.8 percent of the households in Sri Lanka are single

housing unit and percentage of slums or shanties are 1.8 percent. At sector level, 56 percent of the households in the estate sector are in line rooms or row houses and only 0.3 percent of the urban households are flats.

Figure 7.1 Basic structure types of housing units

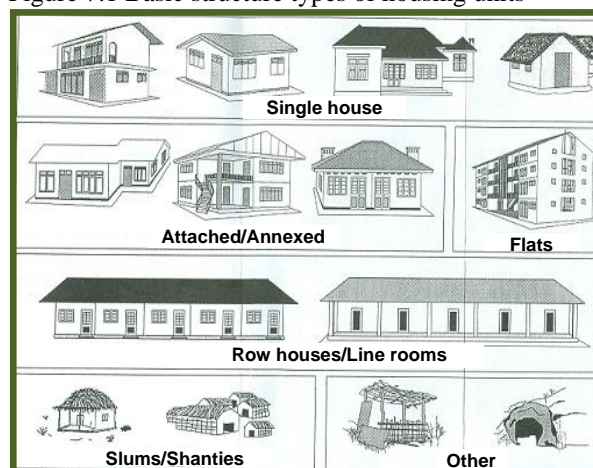

Table 7.1: Percentage distribution of households by type of structure and sector - 2012

Sector	Total	Type of structure							
		Single housing unit			Flats	Attached house/Annex	Line rooms or row houses	Condominium/Luxury	Slums/Shanties and others
		Single storied	Two storied	Higher than two storied					
	(%)		(%)		(%)	(%)	(%)		(%)
Sri Lanka	100	85.7	5.8	0.3	0.3	2.3	3.7	0.2	1.8
Urban	100	71.5	16	1.1	1.7	3.8	2.9	0.9	2.1
Rural	100	91.9	3.8	0.1	-	1.4	1.0	-	1.7
Estate	100	28.7	2.3	-	-	11.9	56.0	0.1	0.9

7.2 Availability of bed rooms

Table 7.2 shows the percentages of households by number of bed rooms (rooms used mostly for sleeping purposes) and sector. The table shows that 1.7 percent households do not have any separate room as bed rooms and 19.1 percent of the households possess only 1 bedroom in Sri Lanka. However, 79.2 percent of the households in Sri Lanka own 2 or more number of bedrooms for their use in the unit.

When the sectors are compared for this statistic, in the estate sector, nearly one half (48.4%) of the households live in units made with less than 2 bed rooms whereas in the rural sector which reports the best figures in this regard, nearly 80.9 percent of the households have 2 or more number of bed rooms and high majority of them (45.2 percent of all) has the luxury of 3 or more number of bed rooms.

Table 7.2: Percentage distribution of households by number of bed rooms the occupy and sector - 2012

Sector	Total	Number of bed rooms					
		No rooms	1 room	2 rooms	3 rooms	4 rooms	5 and more rooms
	(%)	(%)	(%)	(%)	(%)	(%)	(%)
Sri Lanka	100	1.7	19.1	35.3	30.9	10.2	2.8
Urban	100	2.4	19.5	33.1	29.0	12.2	3.8
Rural	100	1.4	17.6	35.7	32.5	10.1	2.6
Estate	100	4.5	43.9	35.2	10.2	3.5	2.7

7.3 Floor area

The proportion of households occupying housing units with floor area more than or equal to 500 square feet in Sri Lanka is 65.9 percent and therefore almost one out of every 3 households live in units with floor area less than 500 square feet. Urban and rural sectors show no big disparity in their size of floor area of the housing

units and therefore the statistics stands close to the national figures. But the estate sector housing conditions are far behind that and still 3 estate households in every 4 (74%), live in units less than the floor area size of 500 square feet.

Table 7.3 Percentage distribution of households by size of the floor area and sector - 2012

Sector	Total	Floor area (square foots)				
		Less than 100	100 - 250	250 - 500	500 - 750	750 and above
	(%)	(%)	(%)	(%)	(%)	(%)
Sri Lanka	100	4.2	12.0	17.9	19.4	46.5
Urban	100	2.2	8.7	17.8	20.5	50.9
Rural	100	4.7	11.6	16.8	19.2	47.7
Estate	100	3.5	32.4	38.1	17.7	8.3

7.4 Principal materials of wall, floor and roof

Based on the materials used for the construction, walls, floor and roof of the housing units are divided into the basic two types i.e. permanent and semi permanent to ease the understanding of the housing conditions of the country.

1. Permanent materials of construction
 - Walls - Bricks, Cabok, Cement blocks, pressed soil blocks etc.
 - Floor - Cement, Terrazzo, Tile, Granite etc.
 - Roof - Tile, Asbestos, Concrete
2. Semi permanent materials of construction
 - Wall - Mud, Planks, Metal sheets, Cadjan, Palmyrah etc.
 - Floor - Mud and similar basic floors
 - Roof - Metal sheets, Cadjan, Palmyrah etc.

Table 7.4 shows the percentages of households, compiled according to the above categories and displays no big disparity among the sectors in regards to the conditions of the Walls and Floors of the housing units. However more of the estate sector households (66.6%) have stated that the roof of the units they live are in the category of semi permanent and stay way behind the other sectors, urban and rural that reported 5.0 and 8.7 percent respectively for the proportion of roofs made with semi-permanent materials.

Table 7.4: Percentage distributions of households by principal construction materials and sector - 2012

Sector	Wall			Floor			Roof		
	Total	Permanent	Semi Permanent	Total	Permanent	Semi Permanent	Total	Permanent	Semi Permanent
	(%)	(%)	(%)	(%)	(%)	(%)	(%)	(%)	(%)
Sri Lanka	100	92.5	7.5	100	91.7	8.3	100	89.5	10.5
Urban	100	94.0	6.0	100	98.2	1.8	100	95.0	5.0
Rural	100	92.0	8.0	100	90.8	9.2	100	91.3	8.7
Estate	100	94.6	5.4	100	83.4	16.6	100	33.4	66.6

7.5 Drinking water

Information collected on the main source of drinking water (i.e. well, tube well, pipe borne water, stream, river, tank etc.) from households reveals that protected well is the major household source of drinking water in Sri Lanka. Among the drinking water sources only protected wells, pipe borne water and tube wells are considered as safe sources and unprotected wells, rivers, tanks, streams etc. are listed as unsafe sources in the HIES.

Table 7.5: Percentage distribution of households by main source of drinking water and sector - 2012

Sector	Total	Drinking water	
		Safe	Not safe
	(%)	(%)	(%)
Sri Lanka	100	88.7	11.3
Urban	100	98.7	1.3
Rural	100	89.0	11.0
Estate	100	43.2	56.8

Table 7.6: Percentage distribution of households by place of drinking water source and sector – 2012

Sector	Total	Drinking water source	
		Within Premises	Outside Premises
	(%)	(%)	(%)
Sri Lanka	100	81.2	18.8
Urban	100	92.0	8.0
Rural	100	79.6	20.4
Estate	100	67.4	32.6

According to the survey findings, nearly 90 percent of the households in Sri Lanka have access to the safe

drinking water. In sector comparison, around 98.7 percent of the households in urban sector receive safe drinking water whereas the facility is limited to 43.2 percent of the households in the estate sector.

It further exposed that nearly 18.8 percent of the households in the country has to go outside the housing premises to fetch drinking water and Figure 7.1 shows that drinking water source of 0.01 percent of the households were beyond 1000 meters in 2012.

Figure 7.1: Percentage distribution of average distance to outside premises to get drinking water

According to the survey findings, 93 percent of the households in Sri Lanka has sufficient water for drinking purposes and 87.1 percent of the households face no water shortages in bathing or washing purposes. Among the sectors the urban sector households are way ahead of this basic necessity and have reached the universal level while nearly 7.5 and 16.0 percent of the rural and estate sector households had to save and limit the use of drinking water due to insufficiency occurs in some periods of the year.

Table 7.7: Percentage distribution of households by sufficiency of water and sector - 2012

Sector	For drinking			Bathing/Washing		
	Total	Sufficient	Not sufficient	Total	Sufficient	not sufficient
	(%)	(%)	(%)	(%)	(%)	(%)
Sri Lanka	100	93.0	7.0	100	87.1	12.9
Urban	100	97.8	2.2	100	97.7	2.3
Rural	100	92.5	7.5	100	85.0	15.0
Estate	100	84.0	16.0	100	81.6	18.4

7.6 Toilet facilities

Survey reveals that nearly 89.8 percent of the households at national level has their own toilet and about 9.4 percent of the households share with another household or uses a public facility. The survey also

exposed, the worse scenario, that 0.8 percent of the households, mainly the rural households did not have access to any toilet in 2012 and 1.9 percent of the estate sector households used public facilities.

Table 7.8: Percentage distribution of households by availability of toilet and by sector - 2012

Sector	Toilet facilities				
	total	Exclusive for the household	Sharing with another household	Public convenience	No toilet facilities
	(%)	(%)	(%)	(%)	(%)
Sri Lanka	100	89.8	8.5	0.9	0.8
Urban	100	88.6	8.5	2.8	0.1
Rural	100	90.8	7.7	0.5	1.0
Estate	100	75.9	21.7	1.9	0.5

7.7 Disposal of garbage

Disposal of garbage is a severe problem for most of the rural sector households in Sri Lanka as the facility of public garbage collection is mostly limited to the urban sector. Considerable differences exhibited in ways of disposing garbage collected in households between the sectors. In urban sector, the highest percentage of

households (74.9 percent) removes their garbage with assistance provided by publicly operated garbage collecting trucks. In comparison, majority of the households in rural sector burn or bury their garbage and estate sector dumped their garbage within premises.

Table 7.9: Percentage distribution of households by disposal of garbage and sector – 2012

Sector	Disposal of garbage						
	Total	Collected by garbage truck	Buried/ burned	Process for fertilizer	Dumped within premises	Throwing outside premises	Other
	(%)	(%)	(%)	(%)	(%)	(%)	(%)
Sri Lanka	100	20.4	44.7	5.2	27.7	0.9	1.2
Urban	100	74.9	15.7	2.8	5.8	0.3	0.5
Rural	100	9.2	51.7	5.8	31.8	0.7	0.7
Estate	100	7.8	32.2	2.5	38.8	6.6	12.0

7.8 Lighting

Having the electricity for all as the source of lighting is one of the economic development goals in Sri Lanka. Approximately, every 8 out of 9 households (88.9 percent) had the facility in 2012, which is 3.6% increase from 85.3% reported in 2009/10. Almost all the rest of

the households use kerosene as the source of lighting (10.1 percent). When the sectors are considered, the proportion of households with electricity in urban, rural and estate sector households are 97%, 87.5%, and 82.8% respectively.

Table 7.10: Percentage distribution of households by principal type of lighting and sector - 2012

Sector	Lighting				
	Total	Electricity	Kerosene	Solar power	Other
	(%)	(%)	(%)	(%)	(%)
Sri Lanka	100	88.9	10.1	1.0	0.1
Urban	100	97.0	2.7	0.3	0.1
Rural	100	87.5	11.3	1.2	0.4
Estate	100	82.8	16.9	0.2	-

7.9 Cooking fuel

Table 7.11 shows that majority of the households in Sri Lanka still use firewood as their cooking fuel (77.5 percent). L.P. gas is used by 19.0% households and only 3.5 percent used Kerosene and other types of fuels.

It is obvious that most urban sector households used L.P. gas as the main type of cooking fuel (55.5 percent) and one out of every 5 rural households also use LPG as the main cooking fuel in 2012. Firewood is commonly and highly used as cooking fuel in both rural sector and estate sector households and the firewood use is 95.3 percent in the estate sector.

Table 7.11: Percentage distribution of households by principal type of cooking fuel and sector - 2012

Sector	Cooking fuel			
	Total	Firewood	LP Gas	Kerosene
	(%)	(%)	(%)	(%)
Sri Lanka	100	77.5	19.0	3.5
Urban	100	35.2	55.5	9.2
Rural	100	85.7	12.0	2.3
Estate	100	95.3	2.4	2.3

7.10 Tenure

Most of the occupied housing units in Sri Lanka are owned (constructed, purchased or inherited) by a member of the household (82.3 percent). and rented or leased households are reported by only 4.4 percent. In

estates, it is very common to provide line rooms free of rent for estate workers and thus most of the households in estate sector live in housing units on rent free basis (72.7 percent).

Table 7.12 Percentage distribution of households by tenure and by sector - 2012

Sector	Tenure					
	Total	Constructed/ Purchased/ Inherited (Own)	Free Received	Rent free	Rent/Lease	other

6. A. Main source of drinking water**Well**

Protected well within premises	1
Protected well outside premises	2
Unprotected well	3

Main tap line

Tap in side home	4
Tap with in unite / premises (main line)	5
Tap out side premises (main line)	6

Other

Project in village	7
Tube well	8
Bowser	9
River/ Tank / Streams	10
Rainey water	11
Bottled water	12
Other (Specify)	99

B. Distance travels to source of drinking water

	Meters
Within premises	1
Outside the premises	2

C. was there enough water to drink, bath & wash during last year

	Yes	No
1. Drink	1	2
2. Bath / wash	1	2

7.A Availability of toilet facilities**Within unit**

Exclusive for the household	1
Sharing with another household	2

Outside unit

Exclusive for the household	3
Sharing with another household	4

Other

No toilet for the unit and sharing with another household	5
Public toilet	6
* not using toilets	7

B. Type of Toilet

Water sealed connected to a pit/tank	1
Water sealed connected to a sewage system	2
Non water sealed	3
Direct pit	4
Other (Specify)	9

8. Disposal of Garbage

Collected by garbage truck	1
Burned	2
Dumped within premises	3
Process for fertilizer	4
Dumped / Throw away out side premises	5
Other (Specify)	9

9. Principal Type of Lighting

Kerosene	1
Electricity	2
Solar energy	3
Generator / Battery	4
Bio gas	5
Other (Specify)	9

10. Principal Type of cooking fuel

Fire wood	1
Gas	2
Kerosene	3
Electricity	4
Saw dust / Paddy husk	5
Other (Specify)	9

11. (A) Did any of the household member collect fire wood during last month?

Yes

1

 No

2

 → go to Q. 12

(B). Distance & place of collecting firewood

		Meter	
Own land	1		
Forest	2		
Other land	3		

12. (A) Was this housing unit effected by any natural disaster during last year?

Yes

1

 No

2

 → go to section 9

(B) Nature of disaster

	Yes	No
1. Floods	1	2
2. Droughts	1	2
3. Earth slips	1	2
4. Attacked by wild animals	1	2
5. Storms	1	2
