Data Collection Organization:

Markinor(stellenbosch)

Fieldwork Period: 01-03-2001 - 22-05-2001.

Universe: National Population, Both sexes, 16 and more years

Sample size: 3000

Estimated Error: 1,8

Questionnaire:

The WVS questionnaire was translated from the English questionnaire by a specialist translator. The translated questionnaire was pre-tested. The pre-tests were part of the general pilots. In total 20 pilots were conducted. The English questionnaire from the University of Michigan was used to make the WVS. Extra questions were added at the end of the questionnaire. Also, country specific questions were included at the end of the questionnaire, just before the demographics.

The sample was designed to be representative of the entire adult population, i.e. 18 years and older, of your country. The lower age cut-off for the sample was 16 and there was not any upper age cut-off for the sample.

Sample:

The sample had to be representative of urban as well as rural populations. Roughly the distribution was as follows:

-South Africa: 60% metropolitan (large cities with populations of 250 000+); 40% non-metropolitan (including cities, large towns, small towns, villages and rural areas).

A standard form of sampling instructions was sent to each agency to ensure uniformity in the sampling procedure. Markinor stratified the samples for each country by region, sex and community size. To this end, statistics and figures that were supplied to us by the agencies were used. However, we requested the agencies to revise these where necessary or where alternatives would be more effective. The agencies then supplied the street names for the urban starting points, and made suggestions for sampling procedures in rural areas where neither maps nor street names were available.

From sample-point level, the respondent selection was done randomly according to a selection grid used by Markinor (the first two pages of the master questionnaire).

Substitution was permitted after three unsuccessful calls.

Six interviews were conducted at each sample point.

The male/female split was 50/50.

The urban sample included all community sizes greater than 500 and the rural sample all community sizes less than 500.

This is the definition of urban and rural used in South Africa.

Remarks about sampling:

-Final numbers of clusters or sapling points:

500

-Sample unit from office sampling:

Street Names

Survey procedure: Personal Face to Face Interview

Fieldwork:

Interviewers were paid according to performance. The interviewer approached was through calls made at different times of day and calls made on different days of week. The minimum number of re-calls required were 3 and 20% of the interviews were back-checked.

Weighting:

Yes

Columns 749-754. Weighting statistics were based on the AMPS (All Media and Products Survey) 200 figures. The ultimate source of these figures is the South African General Population Census, 1997. The data are kept by Statistics South Africa.

Other notes:

Some measures of coding reliability were employed. Each questionnaire is coded against the coding frame. A minimum of 10% of each coders work is checked to ensure consistency in interpretation. If any discrepancies in interpretation are

discovered, a 100% check is carried out on that particular coders work.
Errors were corrected individually and automatically.
