1. Introduction

The Quarterly Labour Force Survey (QLFS) is a household-based sample survey conducted by Statistics South Africa (Stats SA). It collects data on the labour market activities of individuals aged 15 years and above who live in South Africa. However, this report only covers labour market activities of persons aged 15 to 64 years.

This report presents the key findings of the QLFS conducted from October to December 2014 (Q4: 2014).

2. Highlights of the results

Table A: Key labour market indicators

	Oct-Dec 2013	Jul-Sep 2014	Oct-Dec 2014	Qtr-to-qtr change	Year-on- year change	Qtr-to-qtr change	Year-on- year change
	Thousand					Per cent	
Population aged 15–64 yrs	35 022	35 489	35 643	155	622	0,4	1,8
Labour force	20 007	20 268	20 228	-39	221	-0,2	1,1
Employed	15 177	15 117	15 320	203	143	1,3	0,9
Formal sector (non-agricultural)	10 773	10 843	10 911	68	138	0,6	1,3
Informal sector (non-agricultural)	2 446	2 407	2 448	41	2	1,7	0,1
Agriculture	713	686	742	56	28	8,2	4,0
Private households	1 244	1 180	1 219	38	-26	3,2	-2,1
Unemployed	4 830	5 151	4 909	-242	79	-4,7	1,6
Not economically active	15 015	15 221	15 415	194	400	1,3	2,7
Discouraged job-seekers	2 200	2 514	2 403	-111	203	-4,4	9,2
Other (not economically active)	12 815	12 707	13 012	305	198	2,4	1,5
Rates (%)							
Unemployment rate	24,1	25,4	24,3	-1,1	0,2		
Employment/population ratio (absorption rate)	43,3	42,6	43,0	0,4	-0,3		
Labour force participation rate	57,1	57,1	56,8	-0,3	-0,3		

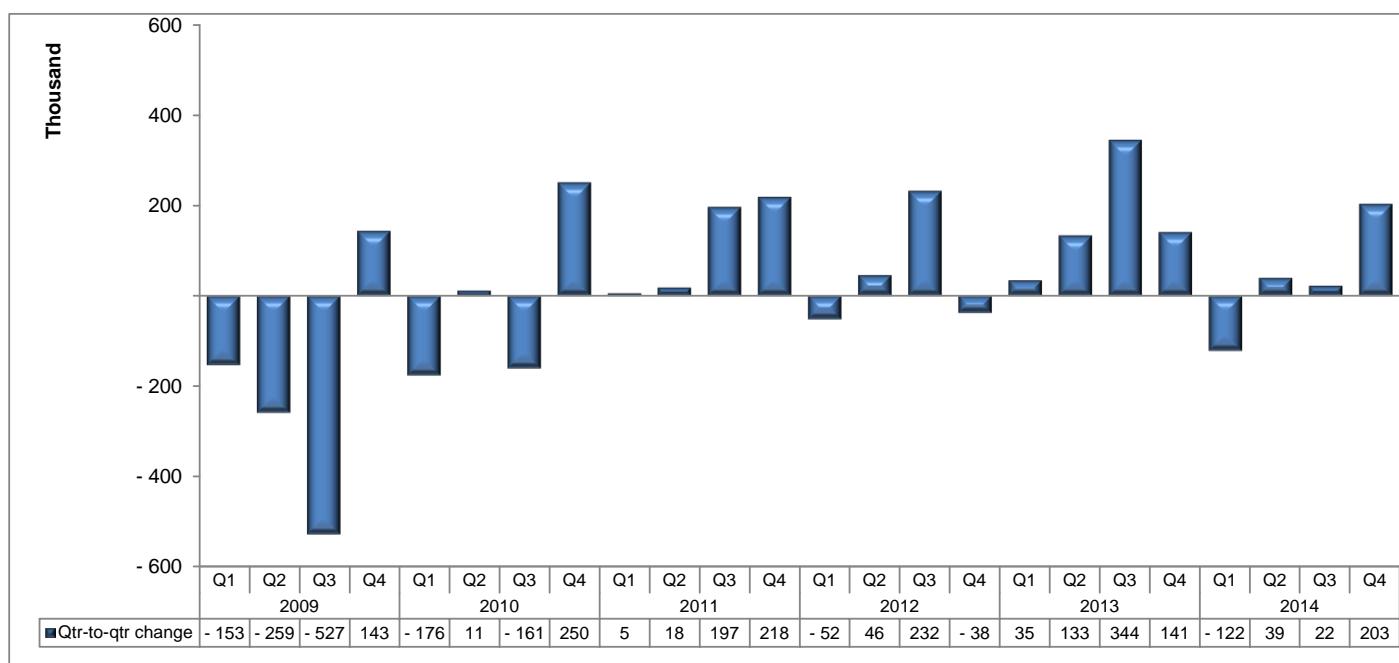

Due to rounding, numbers do not necessarily add up to totals.

Between Q3: 2014 and Q4: 2014, the number of employed people increased by 203 000. Employment increases were observed in all sectors – 68 000 in the formal sector and 41 000 in the informal sector. The Agricultural and Private households industries also observed increases in employment (56 000 and 38 000 respectively). During this period the labour force decreased by 39 000, while the number of unemployed people decreased by 242 000. This resulted in the following changes in the labour market rates - unemployment rate decreasing by 1,1 percentage points to 24,3%, absorption rate increasing by 0,4 of a percentage point and the labour force participation rate decreasing by 0,3 of a percentage point. The number of discouraged work-seekers decreased by 111 000 and the other (not economically active) group increased by 305 000, resulting in a net increase of 194 000 among the not economically active population.

Compared to Q4: 2013, employment increased by 143 000 in Q4: 2014, largely due to increases in the formal sector which grew by 138 000 jobs. The Private households industry shed 26 000 jobs during this period. The number of unemployed people increased by 79 000, resulting in a 0,2 percentage point increase in the unemployment rate. The not economically active population increased by 400 000 - discouraged job-seekers increased by 203 000 and the (other) not economically active group increased by 198 000.

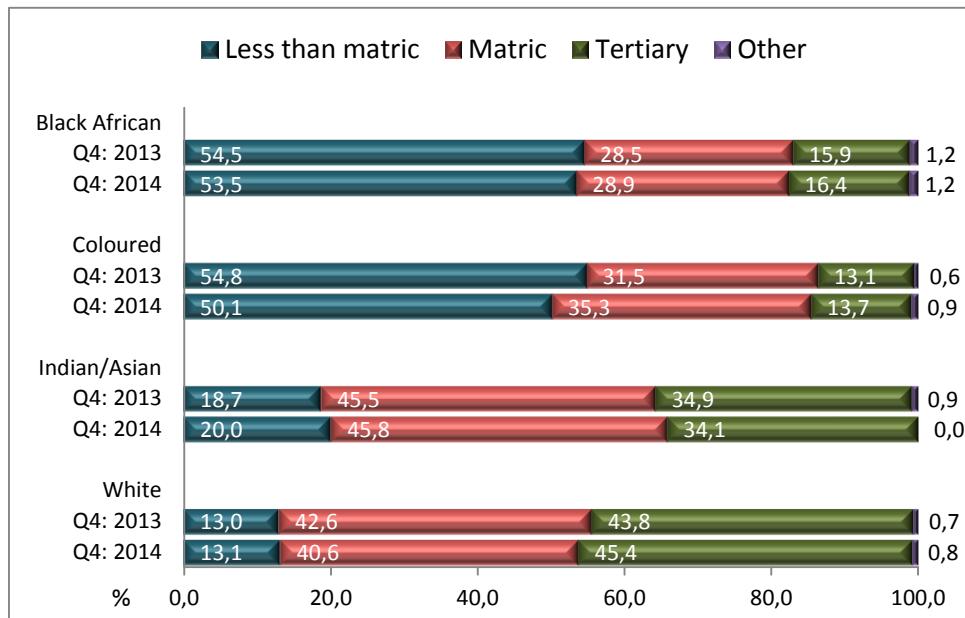

3. Employment

Figure 1: Quarter-to-quarter change in employment, Quarter 1: 2009 to Quarter 4: 2014

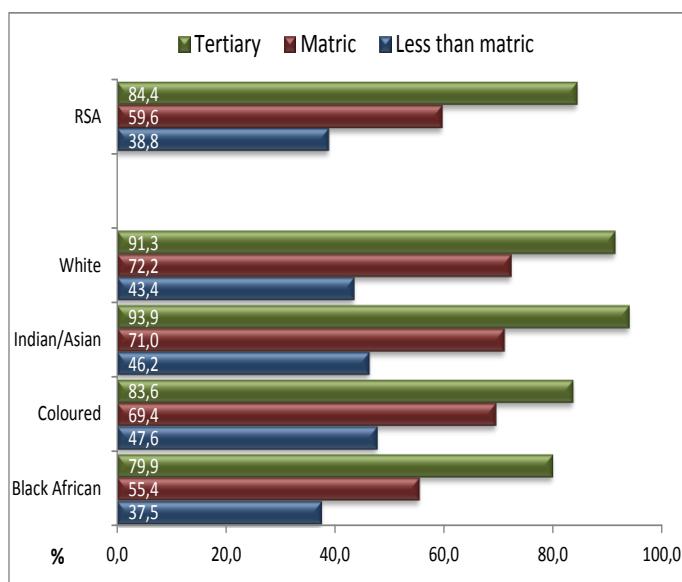

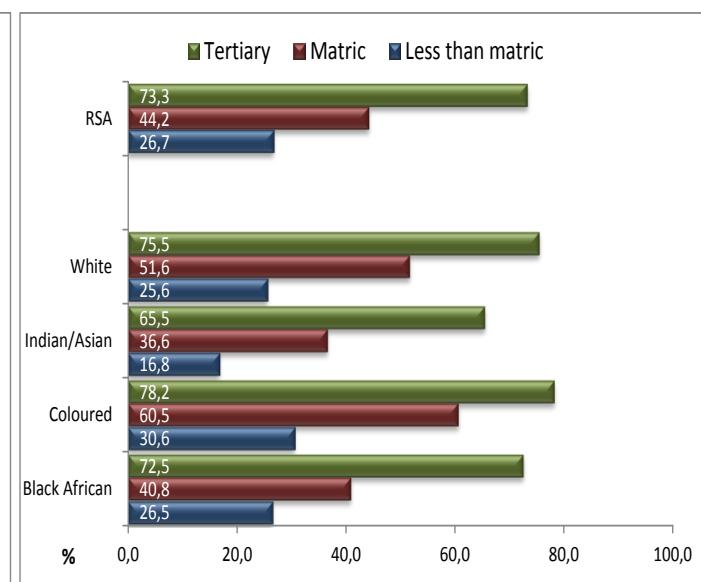

The number of employed people increased for three subsequent quarters since Q2: 2014, with the largest gain recorded in Q4: 2014. Employment gains of 39 000 and 22 000 were recorded in Q2: 2014 and Q3: 2014 respectively, while in Q4: 2014 a gain of 203 000 was recorded.

Figure 2: Educational attainment of the employed by population group, Q4: 2013 and Q4: 2014

In Q4: 2014, the share of the employed population with tertiary education was highest among the white (45,4%) and Indian/Asian (34,1%) population groups. The majority (more than 50%) of employed black Africans and the coloured population did not complete their matric education. Although there were some improvements in Q4: 2014 compared to Q4: 2013, relatively small proportions of employed black Africans and the coloured population group completed tertiary education compared to their white and Indian counterparts.

Figure 3: Absorption rate for men by education and population group, Q4: 2014**Figure 4: Absorption rate for women by education and population group , Q4: 2014**

Figures 3 and 4 highlight large disparities in the labour absorption rate by education level within population groups – where higher levels of education are associated with higher absorption rates. The figures further shows that the absorption rate for men is higher than the absorption rate for women irrespective of educational attainment. However, the gender gap in absorption rates narrows as the levels of education advance to a tertiary level.

At every education level, the absorption rate among black African men is lower than that of men in other population groups (Figure 3), while the absorption rate among black African women is higher than the absorption rate among Indian/Asian women at all educational levels (Figure 4). The black African population (both men and women) are the only population with absorption rates that were lower than the national rates, irrespective of the educational level.

Table B: Employment by industry

Industry	Oct-Dec 2013	Jul-Sep 2014	Oct-Dec 2014	Qtr-to- qtr change	Year-on- year change	Qtr-to- qtr change	Year-on-year change
	Thousand				Per cent		
Total*	15 177	15 117	15 320	203	143	1,3	0,9
Agriculture	713	686	742	56	28	8,2	4,0
Mining [#]	426	441	427	-14	1	-3,2	0,3
Manufacturing	1 766	1 741	1 749	9	-17	0,5	-1,0
Utilities	127	118	104	-15	-23	-12,5	-18,3
Construction	1 204	1 280	1 334	53	130	4,2	10,8
Trade	3 224	3 197	3 247	50	22	1,6	0,7
Transport	961	933	952	19	-10	2,0	-1,0
Finance and other business services	2 037	2 024	2 039	15	2	0,7	0,1
Community and social services	3 470	3 514	3 501	-12	31	-0,4	0,9
Private households	1 244	1 180	1 219	38	-26	3,2	-2,1

Note: Total includes 'other' industry.

[#]Mining is a very clustered industry, hence the industry might not have been adequately captured by the QLFS sample. For more robust mining estimates, please use the Quarterly Employment Statistics (QES).

*Due to rounding, numbers do not necessarily add up to totals.

The number of employed people increased by 203 000 in Q4: 2014 compared to Q3: 2014. Large quarterly gains were observed in the Agriculture (56 000), Construction (53 000) and Trade (50 000) industries. Job losses were recorded in the Utilities, Mining and Community and social services industries (15 000, 14 000 and 12 000 respectively).

Compared to the same period last year, employment increased by 143 000. Annual increases were observed in the Construction (130 000), Community and social services (31 000), Agriculture (28 000) and Trade (22 000) industries. Employment in the Mining and Finance and other business services industries remained virtually unchanged. The largest decreases in employment were observed in the Private households (26 000) and Utilities (23 000) industries.

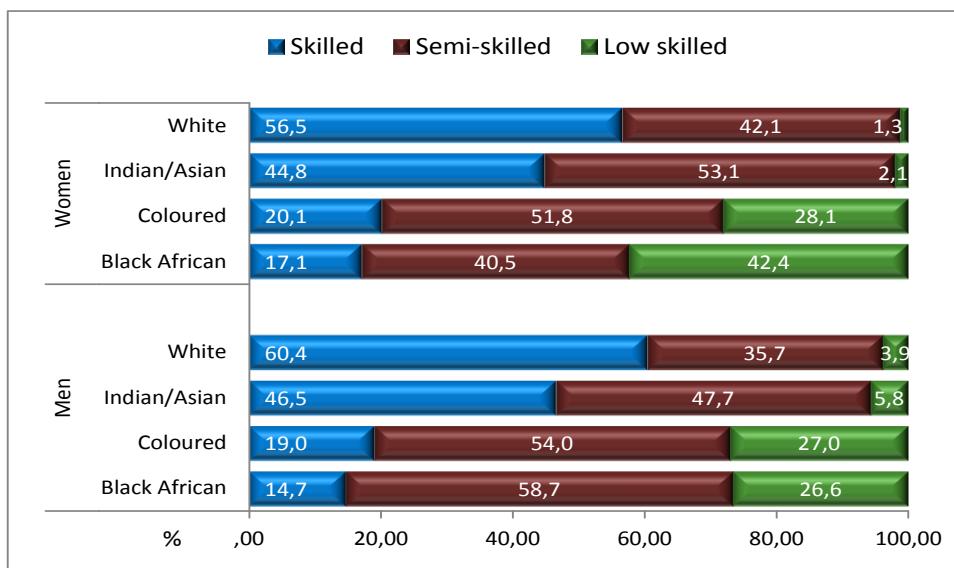

Table C: Employment by occupation

Occupation	Oct-Dec 2013	Jul-Sep 2014	Oct-Dec 2014	Qtr-to-qtr change	Year-on- year change	Qtr-to- qtr change	Year-on- year change
	Thousand				Per cent		
Total	15 177	15 117	15 320	203	143	1,3	0,9
Manager	1 230	1 358	1 337	-22	106	-1,6	8,6
Professional	893	917	654	-264	-239	-28,7	-26,8
Technician	1 637	1 568	1 467	-102	-171	-6,5	-10,4
Clerk	1 624	1 601	1 750	148	126	9,3	7,8
Sales and services	2 298	2 296	2 448	152	150	6,6	6,5
Skilled agriculture	75	86	94	9	19	10,3	25,7
Craft and related trade	1 847	1 816	1 957	141	110	7,7	6,0
Plant and machine operator	1 251	1 270	1 315	45	65	3,6	5,2
Elementary	3 310	3 242	3 356	114	45	3,5	1,4
Domestic worker	1 012	961	943	-18	-69	-1,9	-6,8

*Due to rounding, numbers do not necessarily add up to totals.

The number of employed people increased in six of the ten occupations in Q4: 2014. The largest increases were recorded in the Sales and services (152 000), Clerical (148 000), Craft and related trade (141 000) and Elementary (114 000) occupations. In the same period, large decreases in employment were recorded in the Professional (264 000) and Technician (102 000) occupations.

Annual employment gains were the largest in the Sales and services, Clerical, Craft and related trade and Managerial occupations (150 000, 126 000, 110 000 and 106 000 respectively) in the year ended December 2014. During this period, job losses were recorded in the Professional (239 000), Technician (171 000) and Domestic work (69 000) occupations.

Figure 5: Employed people by occupation, population group and sex, Q4: 2014

Note: 'Skilled' includes Manager, Professional and Technician occupations; 'Semi-skilled' includes Clerk, Sales and services, Skilled agriculture, Craft and related trade and Plant and machine operator occupations; 'Low-skilled' includes Elementary and Domestic worker occupations.

Irrespective of gender, Figure 5 shows that white and Indian/Asian populations are more dominant in skilled occupations compared to black African and coloured population groups. Proportions of employed black African and coloured populations are the largest among low-skilled occupations for both men and women. However, black African women remained vulnerable – about 42% were employed in low-skilled occupations compared to only 1,3% of white women and 2,1% of Indian/Asian women.

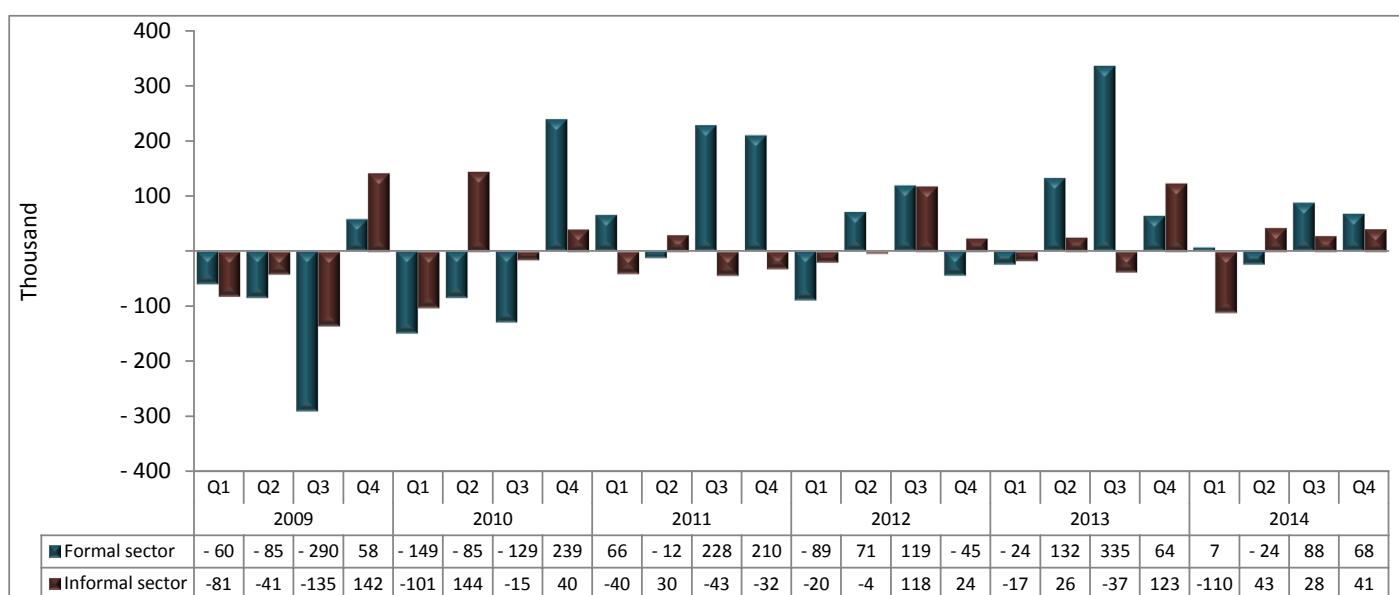

Table D: Employment by province

Province	Oct-Dec 2013	Jul-Sep 2014	Oct-Dec 2014	Qtr-to-qtr change	Year-on- year change	Qtr-to-qtr change	Year-on- year change
	Thousand				Per cent		
South Africa	15 177	15 117	15 320	203	143	1,3	0,9
Western Cape	2 235	2 182	2 170	-12	-65	-0,5	-2,9
Eastern Cape	1 332	1 377	1 336	-42	4	-3,0	0,3
Northern Cape	329	302	320	18	-9	5,9	-2,7
Free State	746	755	772	17	26	2,3	3,5
KwaZulu-Natal	2 527	2 419	2 520	101	-7	4,2	-0,3
North West	869	921	948	28	80	3,0	9,2
Gauteng	4 823	4 820	4 881	61	58	1,3	1,2
Mpumalanga	1 149	1 135	1 138	3	-11	0,2	-0,9
Limpopo	1 168	1 206	1 235	29	67	2,4	5,8

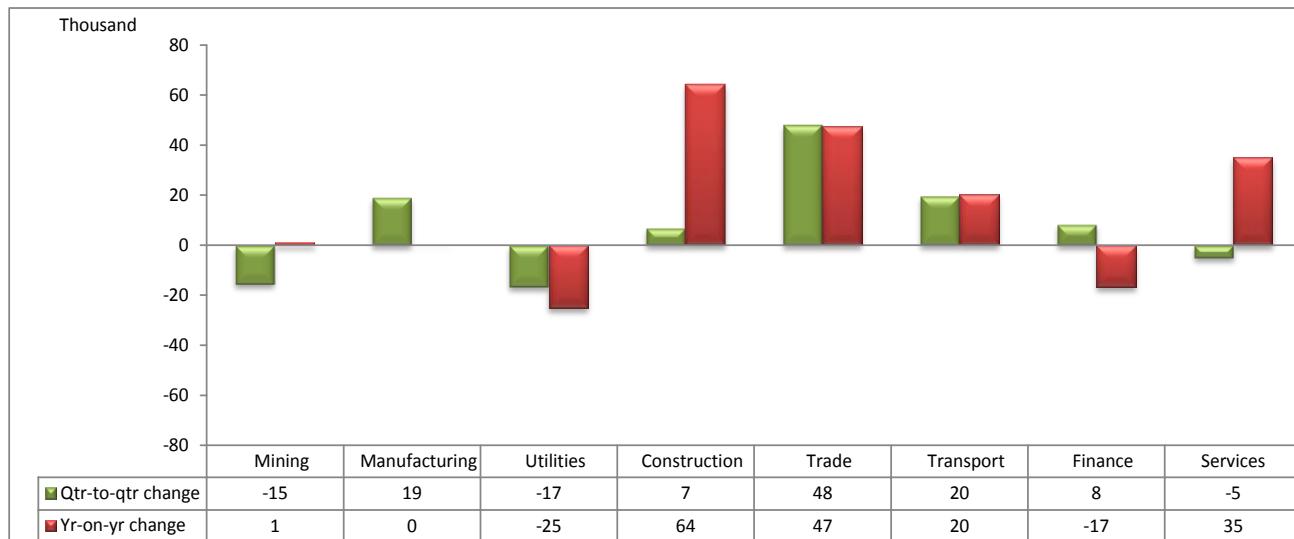

*Due to rounding, numbers do not necessarily add up to totals.

In Q4: 2014 employment gains were recorded in seven of the nine provinces. The largest quarterly employment gains were observed in KwaZulu-Natal (101 000) and Gauteng (61 000). Job losses of 42 000 and 12 000 were respectively recorded in Eastern Cape and Western Cape during this period.

For the year ended December 2014, employment increased in five provinces, with the largest gains recorded in North West (80 000), Limpopo (67 000) and Gauteng (58 000). Western Cape recorded the largest annual decrease in employment during this period, at 65 000.

Figure 6: Quarter-to-quarter changes in employment by sector, Quarter 1: 2009 to Quarter 4: 2014

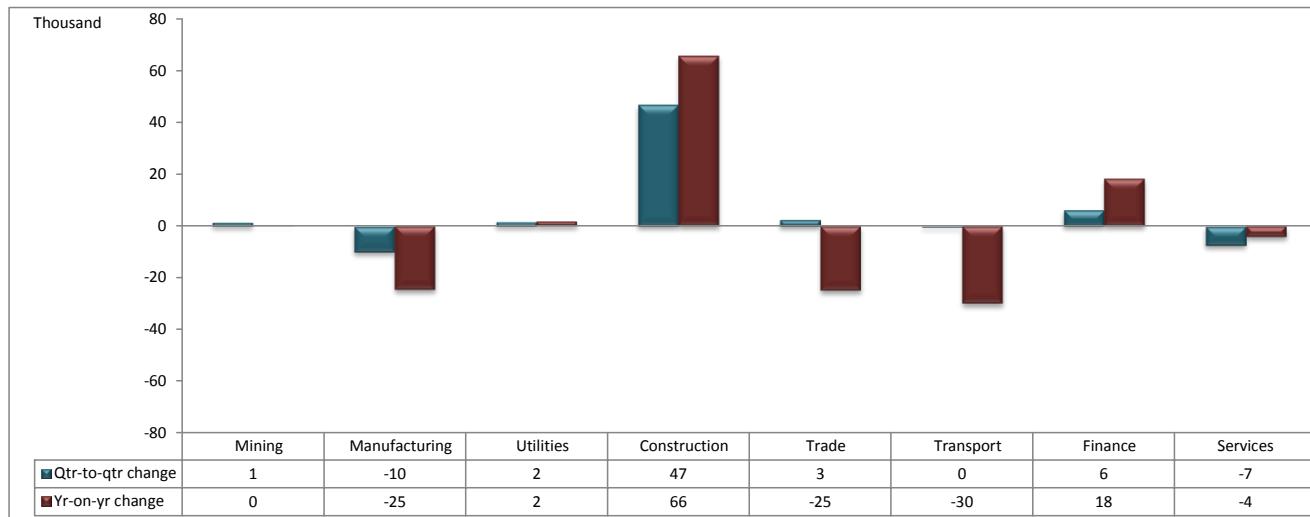

Following a decrease of 24 000 jobs in Q2: 2014, employment in the formal sector increased for two subsequent quarters (88 000 jobs in Q3: 2014 and 68 000 jobs in Q4: 2014). Informal sector jobs increased for three subsequent quarters since Q2: 2014. In Q4: 2014 the informal sector recorded a quarterly gain of 41 000 jobs.

Figure 7: Quarter-to-quarter and year-on-year changes in the formal sector by industry

[#]Mining is a very clustered industry, hence the industry might not have been adequately captured by the QLFS sample. For more robust mining estimates, please use the Quarterly Employment Statistics (QES).

In Q4: 2014, formal sector employment grew by 68 000 compared to Q3: 2014. Large gains in the formal sector jobs were observed in the Trade (48 000), Transport (20 000) and Manufacturing (19 000) industries. Employment declines were observed in the Utilities (17 000), Mining (15 000) and Community and social services (5 000) industries.

An annual gain of 138 000 jobs was recorded in the formal sector in Q4: 2014. The largest employment increases in the formal sector were observed in the Construction, Trade and Community and social services industries (64 000, 47 000 and 35 000 respectively). Employment declined in the Utilities (25 000) and Finance and other business services (17 000) industries; it remained unchanged in the Manufacturing industry and virtually unchanged in the Mining industry.

Figure 8: Quarter-to-quarter and year-on-year changes in the informal sector by industry

[#]Mining is a very clustered industry, hence the industry might not have been adequately captured by the QLFS sample. For more robust mining estimates, please use the Quarterly Employment Statistics (QES).

Informal sector employment grew by 41 000 in Q4: 2014 compared to Q3: 2014. The Construction industry recorded the largest employment gain at 47 000. The Manufacturing and Community and social services industries shed jobs during this period (10 000 and 7 000 respectively).

Compared to Q4: 2013, informal sector jobs increased by the largest numbers in the Construction and the Finance and other business services industries (66 000 and 18 000 respectively). The sector recorded large employment declines in Transport (30 000), Trade (25 000) and Manufacturing (25 000).

3.1 Conditions of employment for employees

Figure 9: Quarter-to-quarter changes in nature of employment contract

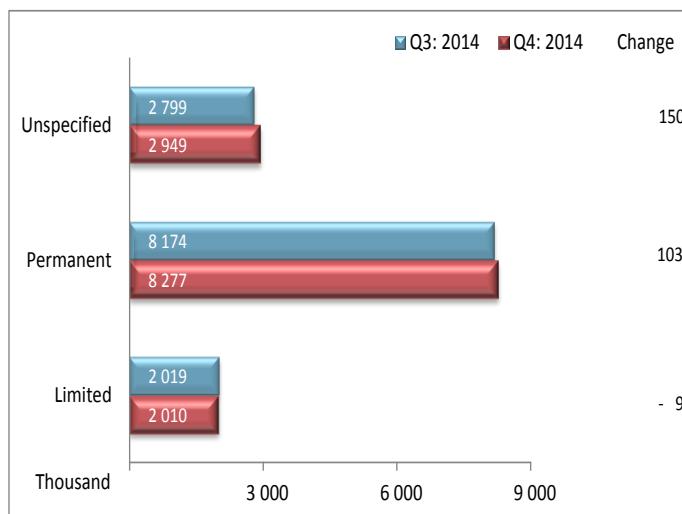

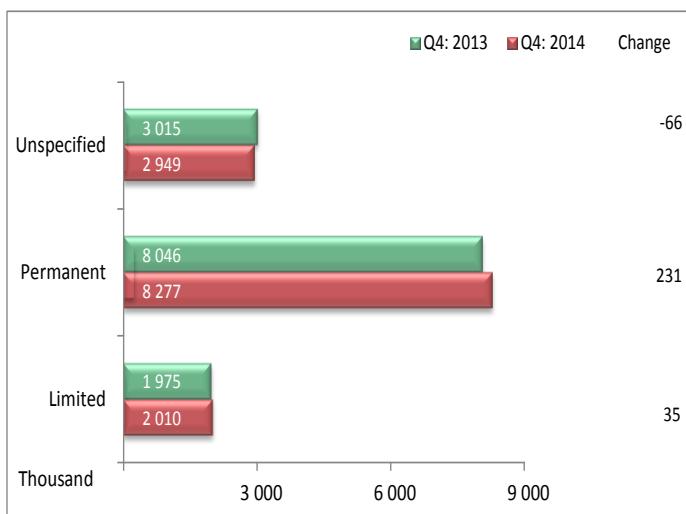

Figure 10: Year-on-year changes in nature of employment contract

Most employees were employed on contracts of a permanent nature. Between Q3: 2014 and Q4: 2014, the number of total employees increased by 244 000 (see Table 3.6 in the appendix). Quarterly increases were observed in the number of employees with contracts of an unspecified duration and among those with contracts of a permanent nature (150 000 and 103 000 respectively). The number of employees with contracts of limited duration decreased slightly by 9 000 (Figure 9).

Over the period Q4: 2013 to Q4: 2014, the number of employees with contracts of a permanent nature and those with contracts of a limited duration increased by 231 000 and 35 000 respectively, while the number of employees with contracts of unspecified duration declined by 66 000.

Figure 11: How salary increment was negotiated, Q4: 2014

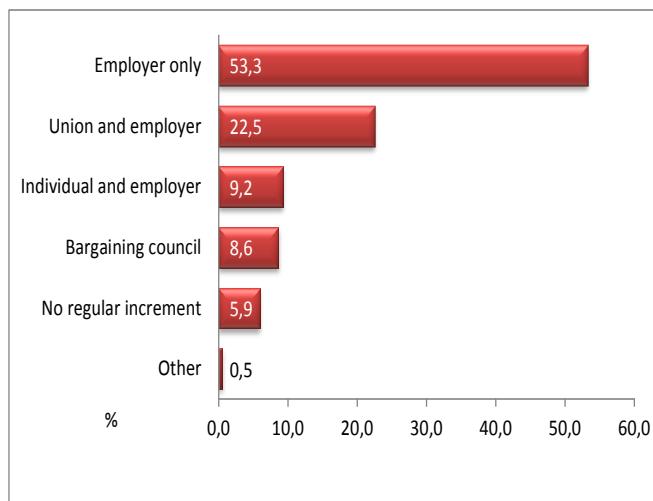

Table E: Year-on-year changes in trade union membership by type of salary negotiation

	Q4: 2013	Q4: 2014	Change
	Thousand		
Individual and employer	60	76	16
Union and employer	2 649	2 742	93
Bargaining council	841	882	41
Employer only	172	193	20
No regular increment	4	7	3
Other	2	1	-1
Total	3 728	3 900	172

Figure 11 shows that most employees (53,3%) had their salary increments determined by their employers only. While 29,5% of employees had a union membership in Q4: 2014 (see Table 3.8 in the appendix), unions negotiated salary increments for 22,5% of employees. About 6% of employees had no regular salary increment in Q4: 2014.

Between Q4: 2013 and Q4: 2014, union membership increased by 172 000 members. Union membership increased in all the types of salary negotiations. The largest increase was among those whose salaries were negotiated between a union and employer (93 000) (see Table E).

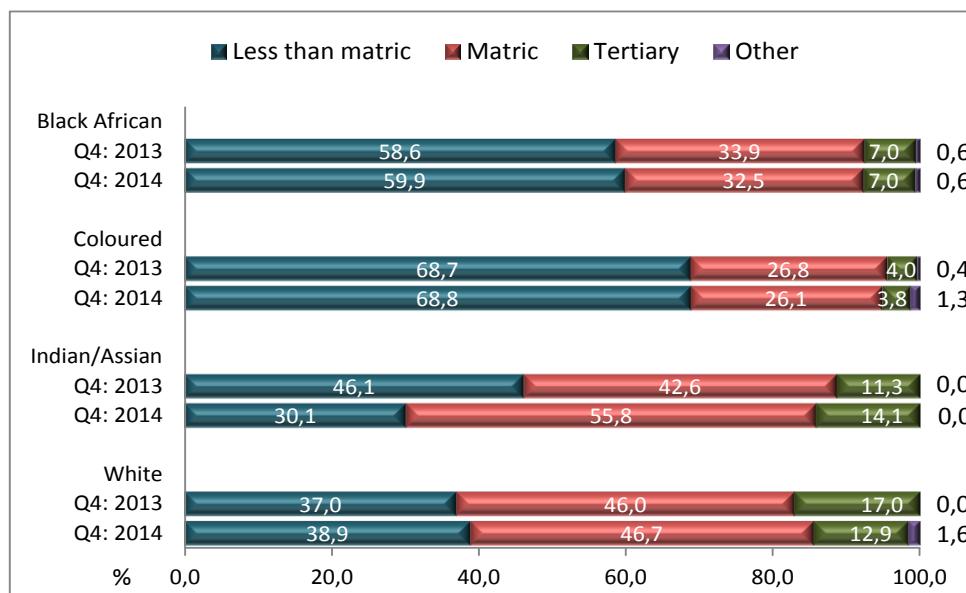

4. Unemployment

Figure 12: Quarter-to-quarter change in employment, Quarter 1: 2009 to Quarter 4: 2014

In Q4: 2014, the number of unemployed people decreased by 242 000 to 4,9 million (see Table A). Figure 12 shows that unemployment increased consecutively in the first two quarters of 2014, while it remained virtually unchanged in Q3: 2014. Increases of 237 000 and 87 000 in the number of unemployed people were observed in Q1: 2014 and Q2: 2014 respectively.

Figure 13: Educational attainment of the unemployed by population group and sex, Q4: 2014

Levels of education below matric were observed in larger proportions among unemployed black Africans and the coloured population. Compared to Q4: 2013, unemployed black Africans with less than matric increased by 1,3 percentage points in Q4: 2014. Seven out of ten coloured people had a qualification of less than matric and the figure remained unchanged compared to a year ago. The proportions of unemployed Indians with less than matric decreased by 16,0 percentage points in favour of those with matric and a tertiary qualification. The proportion of white people with a tertiary qualification decreased from 17,0% in Q4: 2013 to 12,9% in Q4: 2014 (4,1 percentage points decrease).

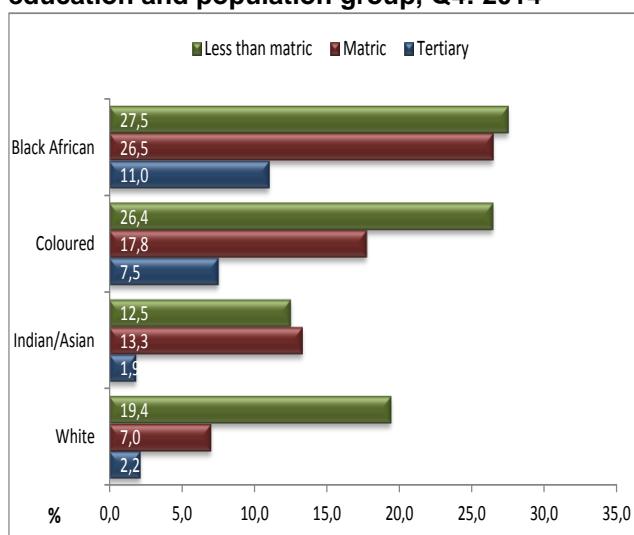

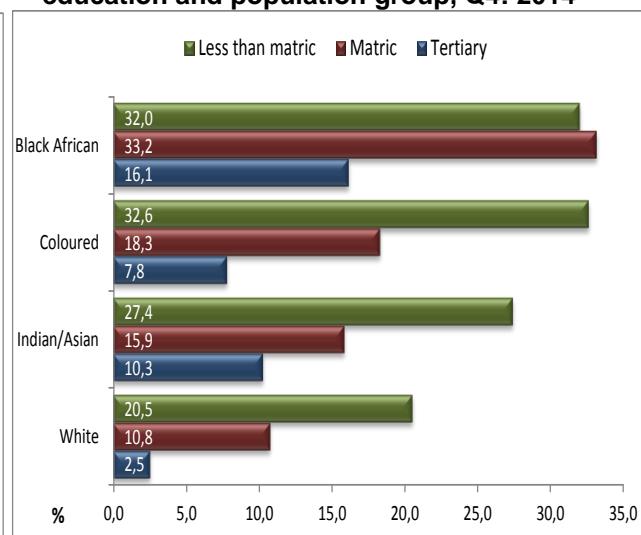

Figure 14: Unemployment rate for men by education and population group, Q4: 2014**Figure 15: Unemployment rate for women by education and population group, Q4: 2014**

Figure 14 and Figure 15 highlight large disparities in unemployment rates by education level and population group. In every education category, the unemployment rate among black Africans is higher than that of other population groups. The figures further shows that the unemployment rate for men is lower than the unemployment rate for women, irrespective of education level. The unemployment rate among men with tertiary qualification ranged from 1,9% (Indian/Asian men) to 11,0% (black African men), while the unemployment rate among women with the same qualification ranged from 2,5% (white women) to 16,1% (black African women). The gender gap is largest among Indians/Asians without matric and tertiary education.

Table F: Unemployment rate by province

	Official unemployment rate					Expanded unemployment rate				
	Oct-Dec 2013	Jul-Sep 2014	Oct-Dec 2014	Qtr-to-qtr change	Year-on-year change	Oct-Dec 2013	Jul-Sep 2014	Oct-Dec 2014	Qtr-to-qtr change	Year-on-year change
	Per cent			Percentage points		Per cent			Percentage points	
	24,1	25,4	24,3	-1,1	0,2	34,0	35,8	34,6	-1,2	0,6
South Africa	24,1	25,4	24,3	-1,1	0,2	34,0	35,8	34,6	-1,2	0,6
Western Cape	21,0	23,6	22,9	-0,7	1,9	22,1	25,5	24,5	-1,0	2,4
Eastern Cape	27,8	29,5	29,1	-0,4	1,3	43,3	43,0	41,9	-1,1	-1,4
Northern Cape	24,9	29,7	28,7	-1,0	3,8	34,8	39,5	38,4	-1,1	3,6
Free State	33,0	34,6	32,2	-2,4	-0,8	40,9	40,9	39,5	-1,4	-1,4
KwaZulu-Natal	19,9	24,1	20,8	-3,3	0,9	36,2	40,8	37,9	-2,9	1,7
North West	27,3	26,8	25,2	-1,6	-2,1	42,2	41,8	40,0	-1,8	-2,2
Gauteng	25,2	24,6	24,6	0,0	-0,6	28,9	29,6	29,6	0,0	0,7
Mpumalanga	27,2	29,3	26,6	-2,7	-0,6	40,2	42,0	40,5	-1,5	0,3
Limpopo	16,9	15,9	15,9	0,0	-1,0	36,1	38,4	37,2	-1,2	1,1

Between Q3: 2014 and Q4: 2014, the official unemployment rate decreased by 1,1 percentage points. Decreases in the unemployment rate were observed in seven of the nine provinces. The largest decreases were recorded in KwaZulu-Natal (3,3 percentage points), Mpumalanga (2,7 percentage points) and Free State (2,4 percentage points). In the same period, the official unemployment rate remained unchanged in Gauteng and Limpopo.

In comparison to the same period last year, Northern Cape, Western Cape and Eastern Cape recorded the largest rise in the official unemployment rate. The largest annual decrease in the official unemployment rate was recorded in North West (2,1 percentage points). Compared to Q3: 2014, the expanded unemployment rate decreased by 1,2 percentage points to 34,6% in Q4: 2014. During this period, eight of the nine provinces recorded decreases in the expanded unemployment rate. The largest decrease was recorded in KwaZulu-Natal at 2,9 percentage points. The expanded unemployment rate in Gauteng remained the same between the two quarters.

5. Job tenure in South Africa

In 2008, Statistics South Africa introduced questions in the Quarterly Labour Force Survey (QLFS) that ask the month and year in which a person started working with their current employer. Utilising this data, the median monthly job tenure is calculated.

The US Bureau of Labor Statistics suggests that "measures of employee tenure can be useful in understanding long-term trends in the labor market". Factors that can affect median job tenure include the age profile of employees, as well as fluctuations in the number of hires and job losses. In addition, job tenure can also serve as an indicator of the degree of mobility in the labour market. It can provide an indication of the rigidity of the labour market as long-tenure jobs are often associated with a more rigid labour regime, while higher levels of unionisation amongst employees also raise the length of job tenure. Caution should be exercised when interpreting the analysis due to small sample sizes; certain categories may also be excluded due to small sample sizes. In addition it should also be noted that due to rounding, totals may not add up.

5.1 Trends in median monthly job tenure 2008–2014

Changes in the composition of the labour force can drive changes in job tenure patterns. For example, an ageing labour force will lengthen job tenure, as age and tenure are highly correlated. In contrast, an increase in female labour participation rates can lead to a decline in average job tenure (Auer, Berg and Coulibaly, 2004)¹. This section presents median monthly job tenure over the period 2008 to 2014.

Table G: Employees by province, 2008–2014

	2008	2010	2012	2014	2008-2014
	Thousands				
South Africa	12 456	11 693	12 313	13 236	780
Western Cape	1 833	1 779	1 887	1 958	125
Eastern Cape	1 086	1 083	1 016	1 181	95
Northern Cape	294	262	284	294	0
Free State	702	672	624	655	-46
KwaZulu-Natal	2 185	1 972	2 050	2 146	-39
North West	799	710	739	853	54
Gauteng	4 000	3 717	3 957	4 199	199
Mpumalanga	839	777	881	968	128
Limpopo	719	721	874	982	263

Table H: Median monthly job tenure by province, 2008 –2014

	2008	2010	2012	2014	2008-2014
	Months				
South Africa	36	44	46	47	11
Western Cape	41	46	47	47	6
Eastern Cape	32	35	37	42	10
Northern Cape	27	28	42	27	0
Free State	37	38	41	47	10
KwaZulu-Natal	32	40	46	45	13
North West	34	47	52	52	18
Gauteng	45	50	53	55	10
Mpumalanga	29	41	43	44	15
Limpopo	35	32	38	41	6

Between 2008 and 2014, the number of employees in South Africa increased from 12,5 million to 13,2 million, constituting an increase of 780 000. Following the economic recession, the number of employees declined to 11,7 million in 2010. An upward trend in the median monthly job tenure was observed over the period 2008 to 2014; the median monthly job tenure increased by 11 months to 47 months (3 years and 11 months) in 2014. This rise may be driven by the fact that during economic downturns, firms tend to first shed those employees who were hired most recently, the last-in-first-out principle.

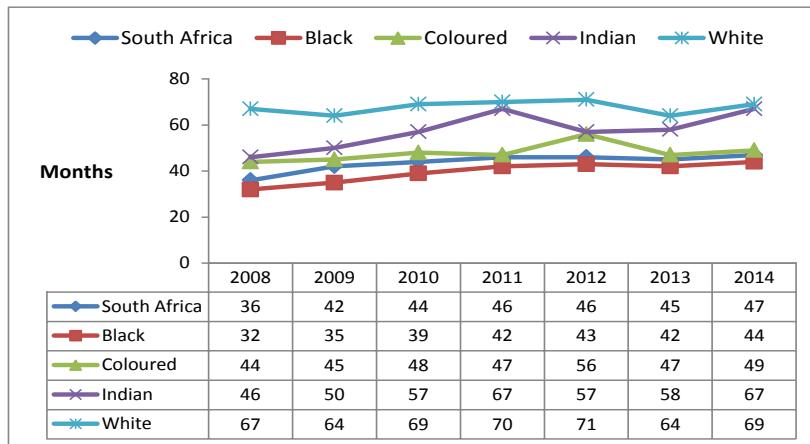

During the period 2008 to 2010, employees decreased in all the provinces, except in Limpopo where the number of employees remained virtually unchanged. The share of employees in North West was the third lowest; however, the decrease in the number of employees in this province was the third highest. Gauteng employees declined by 283 000, followed by KwaZulu-Natal at 213 000 employees and North West at 89 000 employees.

¹ Auer, P., Berg, J. and Coulibaly, I. "Insights into the tenure-productivity-employment relationship", August 2004, Employment Analysis and Research Strategy Department, ILO.

5.2 Job tenure by demographic characteristics

This section analyses median monthly job tenure by demographic variables including population group, sex, age and levels of education.

Figure 16: Median monthly job tenure by population group, 2008–2014

While the gap in median monthly job tenure between black Africans and the white population group narrowed over the period 2008 to 2014, employees from the white population group continue to have the highest job tenure among all population groups. Over the period, the job tenure for black Africans increased from 32 months to 44 months. Between 2008 and 2014, the largest increase in median monthly job tenure was for the Indian population group (21 months or nearly 2 years).

Figure 17: Median monthly job tenure for men, 2008 and 2014

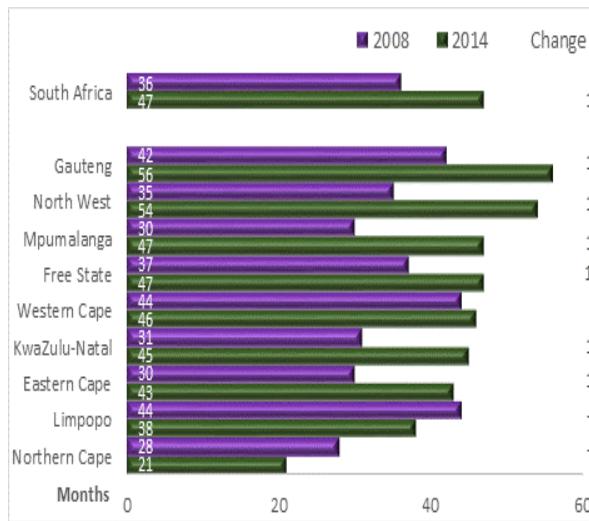

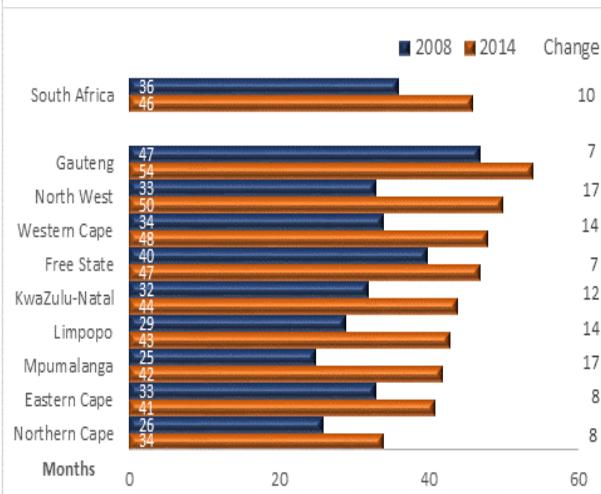

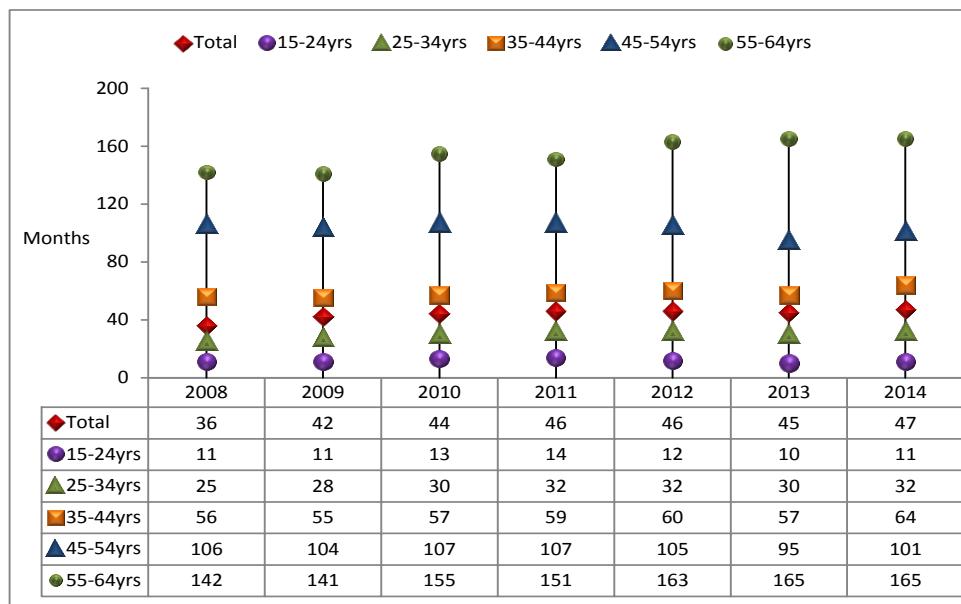

Figure 18: Median monthly job tenure for women, 2008 and 2014

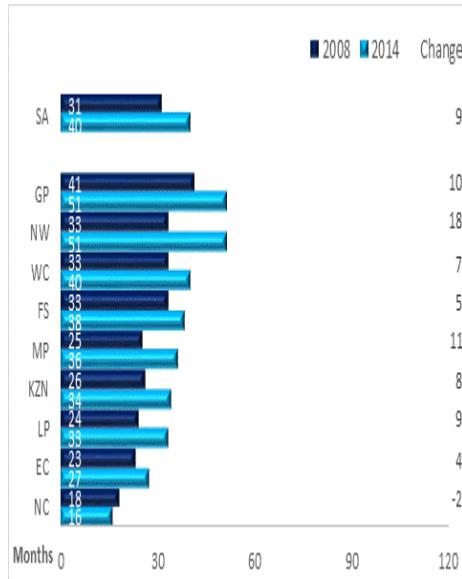

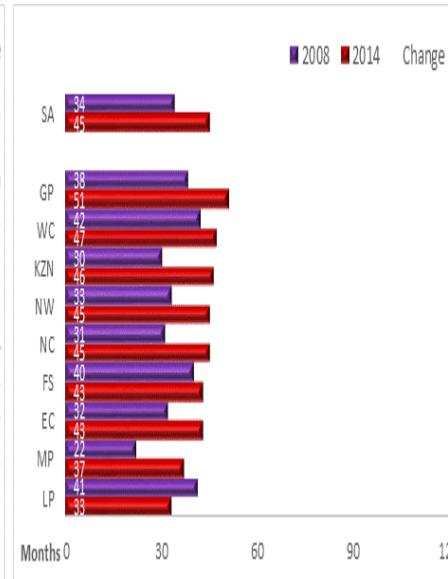

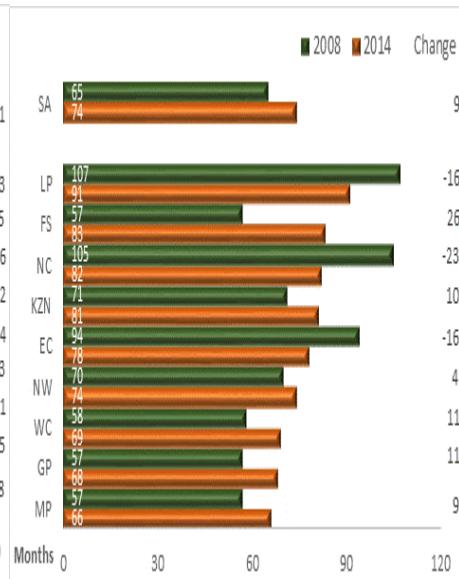

Between 2008 and 2014, job tenure increased by 11 months for men and by 10 months for women. The increase in job tenure for women may reflect the increase in the number of women who were employed as Technicians and Managers, as these occupations are typically associated with higher job tenure.²

In 2014, the highest median monthly job tenure for both men and women was in Gauteng. In 2008, the Western Cape and Limpopo jointly held the first position for men, while for women, Gauteng remained the province with the highest median monthly job tenure. Among men, the largest increase in job tenure over the period was in the North West (19 months) while for women, Mpumalanga and the North West recorded the largest increase (17 months).

² Gender series volume I: Economic Empowerment, 2001–2014, Statistics South Africa.

Figure 19: Median monthly job tenure by age, 2008–2014

Employee job tenure increases with age. In 2014, the median monthly tenure of persons aged 55–64 years was more than 5 times that of persons aged 25–34 years. In 2014, the median monthly job tenure of those aged 55–64 years was 165 months or 13,8 years – up from 142 months (11,8 years) in 2008, which is an increase of 23 months over the period, and the largest rise among all age groups. In contrast, the median monthly tenure for young people aged 15–24 years remained unchanged at 11 months in both 2008 and 2014. Job tenure for youth aged 25–34 years is higher compared to that of their younger counterparts and has increased from 25 to 32 months over the period.

Figure 20: Median monthly job tenure for employees with less than matric, 2008 and 2014**Figure 21: Median monthly job tenure for employees with matric, 2008 and 2014****Figure 22: Median monthly job tenure for employees with tertiary education, 2008 and 2014**

Higher levels of education are associated with longer job tenure. Between 2008 and 2014, job tenure increased among all the levels of education, with the largest increase for employees with matric (11 months), while for the other two educational categories the increase over the period was 9 months. In 2014, the job tenure of a person with a tertiary qualification was more than twice that of a person with a below matric level of education.

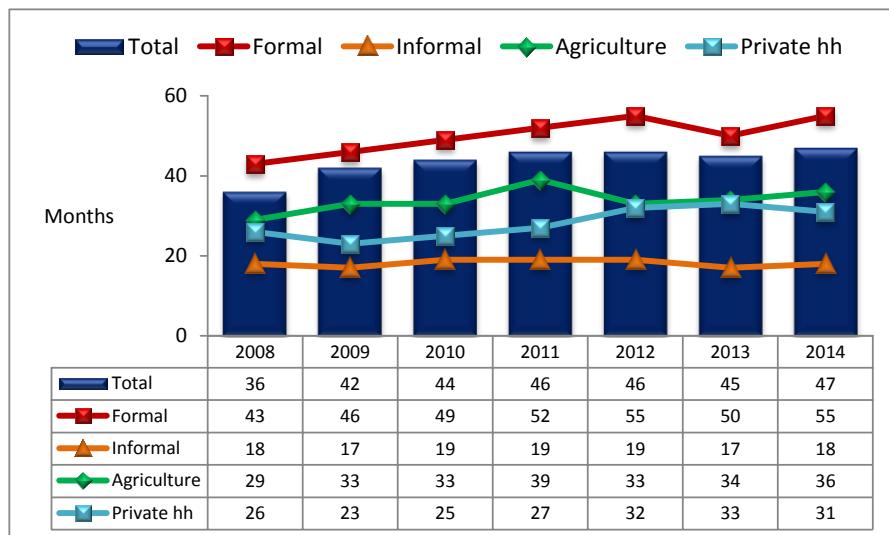

Among employees with less than a matric level of education, Gauteng accounted for the highest median monthly job tenure in both 2008 and 2014 (Figure 20). The largest increase in job tenure for those with less than matric was observed in North West (18 months). In 2008, Western Cape accounted for the highest median monthly job tenure for

employees with a matric qualification; however, in 2014, the highest median monthly job tenure was in Gauteng (Figure 21). The largest increase in job tenure for employees with a matric qualification was in KwaZulu-Natal (16 months), Mpumalanga (15 months) and Northern Cape (14 months). In 2008, Limpopo and Northern Cape recorded the highest job tenure for employees with a tertiary qualification, while in 2014, Limpopo retained the number one spot, followed by Free State. Free State reflected the largest increase over the period (26 months) while job tenure declined the most in Northern Cape (23 months).

5.3 Median monthly tenure by industry, occupation and sector

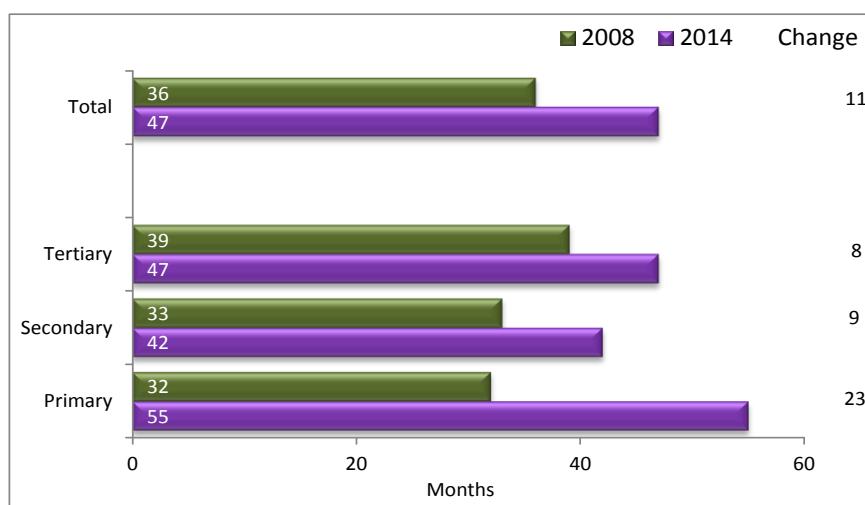

This section focuses on the trends in the length of job tenure over the period 2008 to 2014 by occupation, industry and sector.

Figure 23: Median monthly tenure by sector, 2008–2014

In addition to the formal sector being characterised by job security, employment protection and higher levels of unionisation, job tenure in this sector is also higher relative to the informal sector³. Between 2008 and 2014, job tenure increased in the formal sector (12 months), while it remained unchanged in the informal sector. The median job tenure also increased in the Agriculture and Private households industries (7 months and 5 months respectively).

Figure 24: Median monthly job tenure by industry, 2008 and 2014

Note: 'Primary industry' includes Agriculture and Mining; 'Secondary industry' includes Manufacturing, Utilities and Construction; 'Tertiary industry' includes Trade, Transport, Finance, Services and Private households.

³ Stats SA, "National and provincial labour market: The informal sector: Q2: 2008–Q2: 2014", forthcoming

Between 2008 and 2014, all industry categories reflected an increase in median monthly job tenure. The lowest job tenure in 2008 was observed in primary industries (32 months); however, by 2014, primary industries accounted for the highest job tenure at 55 months.

Figure 25: Median monthly job tenure, low-skilled occupations, 2008 and 2014

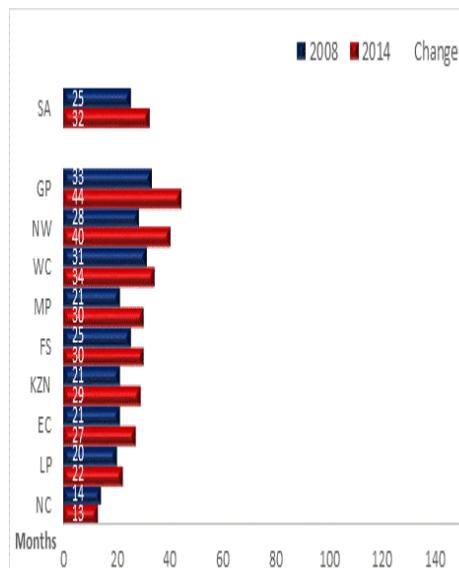

Figure 26: Median monthly job tenure, semi-skilled occupations, 2008 and 2014

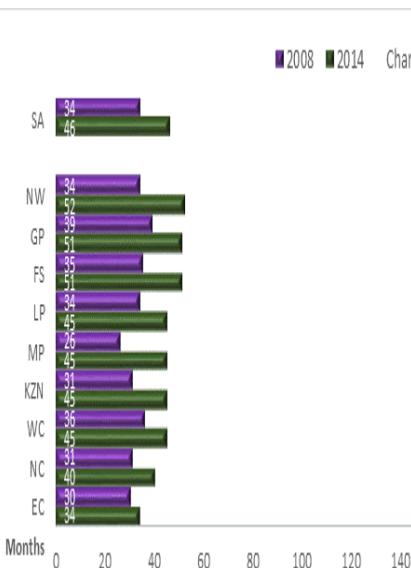

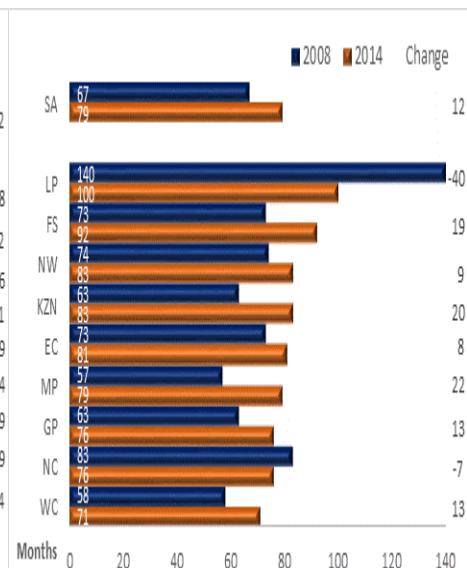

Figure 27: Median monthly job tenure, skilled occupations, 2008 and 2014

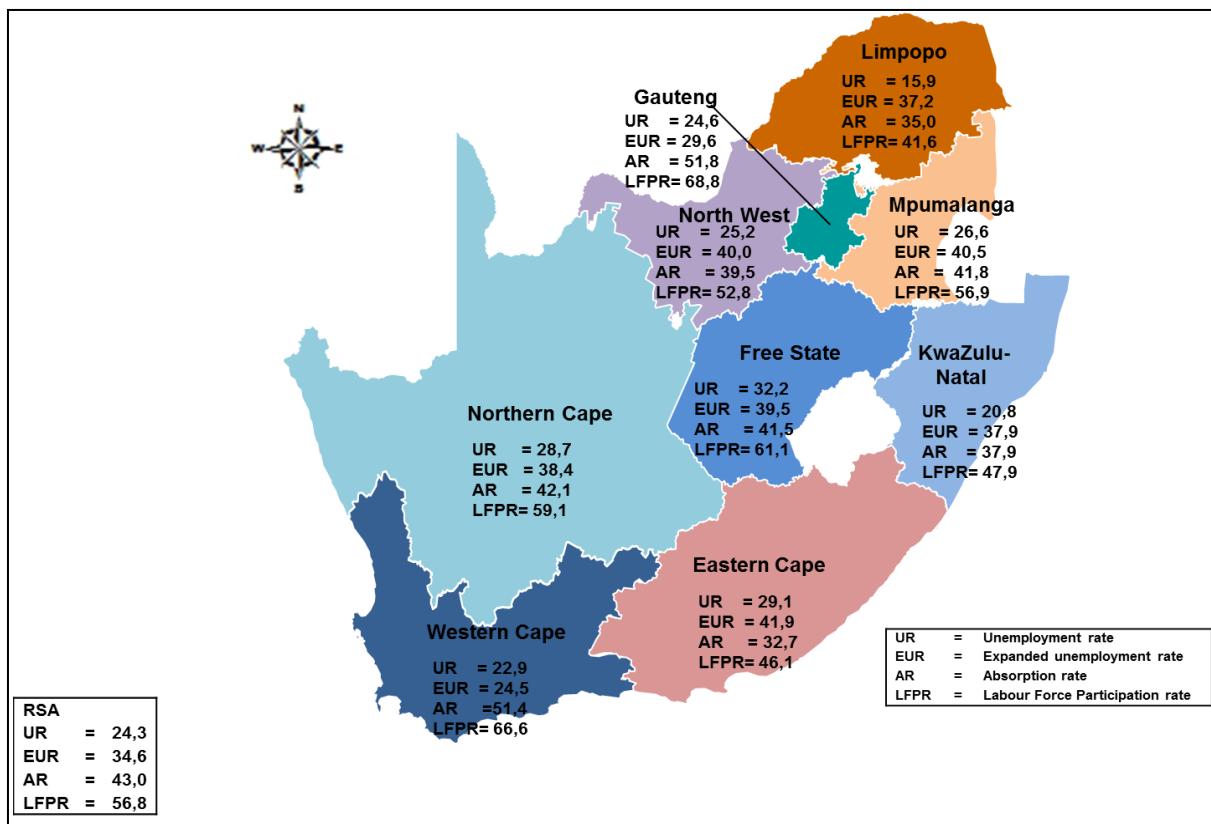

Note: 'Skilled' includes Manager, Professional and Technician occupations; 'Semi-skilled' includes Clerk, Sales and services, Skilled agriculture, Craft and related trade and Plant and machine operator occupations; 'Low-skilled' includes Elementary and Domestic worker occupations.

Skilled occupations recorded the highest median monthly job tenure in both 2008 and 2014, increasing by 12 months or 1 year over the period. In 2014, the job tenure of an employee employed in a skilled occupation was 2,5 times higher than that of a low-skilled employee.

Low-skilled occupations have the lowest median monthly job tenure compared to semi-skilled and skilled occupations. In 2008 and 2014, Gauteng recorded the highest job tenure for low-skilled occupations, while the lowest job tenure in both years was in the Northern Cape and Limpopo (Figure 25). Among employees in low-skilled occupations, the largest increase was in the North West (12 months), followed by Gauteng (11 months). Figure 26 shows that in 2008, Gauteng occupied the top position, while in 2014, North West had the highest job tenure amongst semi-skilled occupations. Between 2008 and 2014, job tenure increased the most in Mpumalanga (19 months) and North West (18 months) among employees in semi-skilled occupations. In 2014, Limpopo and the Free State had the highest job tenure amongst skilled occupations, while Limpopo recorded the largest decrease (40 months) between 2008 and 2014. The largest increases were recorded in Mpumalanga (22 months) and KwaZulu-Natal (20 months) over the period (Figure 27).

8. Comparison of the QLFS and the QES

Table I: Key differences between the QLFS and the QES

	QLFS	QES
Coverage	Private households and workers' hostels Non-institutional population (15 years and older) Total employment (including informal sector, Private households, Agriculture and small businesses)	Payroll of VAT-registered businesses Employees only Formal sector excluding Agriculture
Sample size	Quarterly sample of approximately 30 000 dwellings in which households reside	Quarterly sample of 20 000 non-agricultural formal sector businesses
Reference period	One week prior to the interview	Payroll on the last day of the quarter
Standard Industrial Classification (SIC)	All industries	Excluding Agriculture and Private households
Formal sector definition (excluding Agriculture and Private households)	Employers and own-account workers registered for VAT or income tax Employees paying income tax and those not paying tax but working in firms with 5 or more workers	Employees on payroll of VAT-registered businesses

Figure 32: Formal sector trends in QLFS and QES

9. Technical notes

9.1 Response details

Table J: Response rates by province

Province	Oct–Dec 2014
	Per cent
Western Cape	90,7
Eastern Cape	95,8
Northern Cape	89,9
Free State	96,1
KwaZulu-Natal	95,9
North West	93,1
Gauteng	76,9
Mpumalanga	93,9
Limpopo	99,4
South Africa	91,4

9.2 Survey requirements and design

The Quarterly Labour Force Survey (QLFS) frame has been developed as a general-purpose household survey frame that can be used by all other household surveys, irrespective of the sample size requirement of the survey. The sample size for the QLFS is roughly 30 000 dwellings per quarter.

The sample is based on information collected during the 2001 Population Census conducted by Stats SA. In preparation for the 2001 Census, the country was divided into 80 787 enumeration areas (EAs). Stats SA's household-based surveys use a master sample of primary sampling units (PSUs) that comprise EAs that are drawn from across the country.

The sample is designed to be representative at provincial level and within provinces at metro/non-metro levels. Within the metros, the sample is further distributed by geography type. The four geography types are: urban formal, urban informal, farms, and tribal. This implies, for example, that within a metropolitan area, the sample is representative of the different geography types that may exist within that metro.

The current sample size is 3 080 PSUs. It is divided equally into four subgroups or panels called rotation groups. The rotation groups are designed in such a way that each of these groups has the same distribution pattern as that which is observed in the whole sample. They are numbered from one to four and these numbers also correspond to the quarters of the year in which the sample will be rotated for the particular group.

The sample for the redesigned Labour Force Survey (i.e. the QLFS) is based on a stratified two-stage design with probability proportional to size (PPS) sampling of PSUs in the first stage, and sampling of dwelling units (DUs) with systematic sampling in the second stage.

9.3 Sample rotation

Each quarter, a $\frac{1}{4}$ of the sampled dwellings rotate out of the sample and are replaced by new dwellings from the same PSU or the next PSU on the list. Thus, sampled dwellings will remain in the sample for four consecutive quarters. It should be noted that the sampling unit is the dwelling, and the unit of observation is the household. Therefore, if a household moves out of a dwelling after being in the sample for, say two quarters, and a new household moves in, the new household will be enumerated for the next two quarters. If no household moves into the sampled dwelling, the dwelling will be classified as vacant (unoccupied).

9.4 Weighting

The sampling weights for the data collected from the sampled households are constructed in such a manner that the responses could be properly expanded to represent the entire civilian population of South Africa. The weights are the result of calculations involving several factors, including original selection probabilities, adjustment for non-response, and benchmarking to known population estimates from the Demography division of Stats SA.

9.5 Non-response adjustment

In general, imputation is used for item non-response (i.e. blanks within the questionnaire) and edits failure (i.e. invalid or inconsistent responses). The eligible households in the sampled dwellings can be divided into two response categories: respondents and non-respondents; weight adjustment is applied to account for the non-respondent households (e.g. refusal, no contact, etc.).

9.6 Final survey weights

The final survey weights are constructed using regression estimation to calibrate to the known population counts at the national level population estimates (which are supplied by the Demography division), cross-classified by 5-year age groups, gender and race, and provincial population estimates by broad age groups. The 5-year age groups are: 0–4, 5–9, 10–14, etc., and 65 years and above. The provincial level age groups are: 0–14, 15–34, 35–64, and 65 years and above. The calibrated weights are constructed so that all persons in a household would have the same final weight.

9.7 Estimation

The final survey weights are used to obtain the estimates for various domains of interest, e.g. number of persons employed in Agriculture in Western Cape, number of females employed in Manufacturing, etc.

9.8 Reliability of the survey estimates

Since estimates are based on sample data, they differ from figures that would have been obtained from complete enumeration of the population using the same instrument. Results are subject to both sampling and non-sampling errors. Non-sampling errors include biases from inaccurate reporting, processing, and tabulation, etc., as well as errors from non-responses and incomplete reporting. These types of errors cannot be measured readily. However, to some extent, non-sampling errors can be minimised through the procedures used for data collection, editing, quality control, and non-response adjustment. The variances of the survey estimates are used to measure sampling errors. The variance estimation methodology is discussed below.

(i) Variance estimation

The most commonly used methods for estimating variances of survey estimates from complex surveys such as the QLFS, are the Taylor-series Linearization, Jack-knife Replication, Balanced Repeated Replication (BRR), and Bootstrap methods (Wolter, 2007)⁴. The Fay's BRR method has been used for variance estimation in the QLFS because of its simplicity.

(ii) Coefficient of variation

It is more useful in many situations to assess the size of the standard error relative to the magnitude of the characteristic being measured (the standard error is defined as the square root of the variance). The **coefficient of variation** (*cv*) provides such a measure. It is the **ratio of the standard error of the survey estimate to the value of the estimate itself expressed as a percentage**. It is very useful in comparing the precision of several different survey estimates, where their sizes or scale differ from one another.

(iii) P-value of an estimate of change

The p-value corresponding to an estimate of change is the probability of observing a value larger than the particular observed value under the hypothesis that there is no real change. If p-value <0,01, the difference is highly significant; if p-value is between 0,01 and 0,05, the difference is significant; and if p-value >0,05, the difference is not significant.

⁴Wolter, K.M., 2007. *Introduction to Variance Estimation, 2nd Edition*. New York: Springer-Verlag.

10. Definitions

Discouraged job-seeker is a person who was not employed during the reference period, wanted to work, was available to work/start a business but did not take active steps to find work during the last four weeks, provided that the main reason given for not seeking work was any of the following: no jobs available in the area; unable to find work requiring his/her skills; lost hope of finding any kind of work.

Economic activities are those that contribute to the production of goods and services in the country. There are two types of economic activities, namely: (1) Market production activities (work done for others and usually associated with pay or profit); and (2) Non-market production activities (work done for the benefit of the household, e.g. subsistence farming).

Employed persons are those aged 15–64 years who, during the reference week, did any work for at least one hour, or had a job or business but were not at work (temporarily absent).

Employment-to-population ratio (labour absorption rate) is the proportion of the working-age population that is employed.

Informal employment identifies persons who are in precarious employment situations irrespective of whether or not the entity for which they work is in the formal or informal sector. Persons in informal employment therefore comprise all persons in the informal sector, employees in the formal sector, and persons working in private households who are not entitled to basic benefits such as pension or medical aid contributions from their employer, and who do not have a written contract of employment.

Informal sector: The informal sector has the following two components:

- i) Employees working in establishments that employ fewer than five employees, who do not deduct income tax from their salaries/wages; and
- ii) Employers, own-account workers and persons helping unpaid in their household business who are not registered for either income tax or value-added tax.

The **labour force** comprises all persons who are employed plus all persons who are unemployed.

Labour force participation rate is the proportion of the working-age population that is either employed or unemployed.

Long-term unemployment: Persons in long-term unemployment are those individuals among the unemployed who were without work and trying to find a job or start a business for one year or more.

Not economically active: Persons aged 15–64 years who are neither employed nor unemployed in the reference week.

Persons in **underemployment (time-related)** are employed persons who were willing and available to work additional hours, whose total number of hours actually worked during the reference period were below 35 hours per week.

Underutilised labour comprises three groups which are defined as follows: persons who are underemployed, persons who are unemployed, and persons who are discouraged.

Unemployed persons are those (aged 15–64 years) who:

- a) Were not employed in the reference week; **and**
- b) Actively looked for work or tried to start a business in the four weeks preceding the survey interview; **and**
- c) Were available for work, i.e. would have been able to start work or a business in the reference week; **or**
- d) Had not actively looked for work in the past four weeks but had a job or business to start at a definite date in the future and were available.

Unemployment rate is the proportion of the labour force that is unemployed.

The **working-age population** comprises all persons aged 15–64 years.
