

2016 POPULATION AND HOUSING CENSUS VILLAGE LIST

IMPORTANT NOTES:

This Population and Housing Census Village List report provides official population and households figures in Lesotho disaggregated by enumeration areas which are classified in accordance to district, constituency, council, ecological zone, and settlement boundaries. A Census Enumeration Area (CEA) is defined as a well delineated territorial unit, in which the enumeration was carried out by a single enumerator during the specified census period of enumeration. The size of CEA is usually established in terms of a number of households it contains. A household is defined as one or more persons living together and eat from the same pot, irrespective of whether they are related by blood or not. The CEA is identified by unique 11 digit code, which is used to distinguish it from other CEAs. For example, the CEA code **01050511023** refers to EA number **023** which is located within district **01** (the 1st two digits), constituency **05** (the 3rd and 4th digits), council **05** (the 5th and 6th digits), ecological zone **1** (the 7th digit) and settlement type **1** (the 8th digit) in the code.

For settlement types, there are 3 of them namely urban (code 1), peri-urban (code 2) and rural (code 3). A Peri-Urban CEAs consist of those villages that are considered neither urban nor rural settlements in terms of socio-economic characteristics, service facilities and settlement patterns. The settlement types can further be divided into 4 ecological zones. These are the lowlands (code 1), foothills (code 2), mountains (code 3) and senqu river valley (code 4).

| District | Constituency | Council | Enumeration Area Code | Ecological Zone | Settlement | Village Name | Households | Population | | |
