D. WILLINGNESS TO PAY FOR A GRID CONNECTION

For each household, CAPI will randomly assign one of the seven following amounts in the placeholder \${CF}: 0% of the connection fee in local currency and respectively 14%, 29%, 43%, 57%, 71%, 100%.

D.1	Interviewer/CAPI check: Is the household connected to the national grid?		Yes.....1 →F.1 No.....2
D.1A	D.1A Enumerator: Please select the appropriate category and prices to the category. Note- Zambia has different connection prices for different locations. Filter Question for Section D– the EA is		Rural1 Urban low cost...2 Urban medium cost...3 Urban high cost....4
D.2	Enumerator: Record Respondent ID for this section	<input type="text"/>	Individual ID from Household Roster

Electricity requires several types of payments. There are three parts to the cost of electricity: connection, wiring, and monthly use. In other words, to use electricity you need to have a wire from a meter in your house to the pole first. That is the connection. You also need to have wires to connect appliances within your house to the meter. This is the wiring. Finally, to keep using electricity you must pay for what is used and measured by the meter, or it will be turned off, this is the cost of monthly use. I would like to ask you questions only about the first cost of connecting – getting a wire from the electricity poles to a meter on your house.

If you could pay a “lump sum” price for an electricity connection, in other words, you are offered a price and a period of time to decide whether to take this price. If you decide to take the price, you have to pay all at once, after which you are immediately connected. As you answer the next few questions, assume that all other wiring fees and monthly service fees for using electricity, once you have the connection, remain the same as they are now.

D.3	Would you be willing to pay \${CF} upfront for an electricity connection?		Yes.....1 →D.9 No.....2
D.4	Would you be willing to pay \${CF} for an electricity connection, if you were given 3 months to make the payment?		Yes.....1 →D.9 No.....2 Don't Know.....8

D.7	If the connection fee were waived, would you get a grid connection?		Yes.....1→D.9 No.....2 Don't Know.....8
D.8	Why would you not accept the offer?		Still cannot afford the wiring costs.....1 Do not need electricity.....2 Electricity service is unreliable.....3 Monthly fee is too expensive.....4 Other, specify.....555

E. WILLINGNESS TO PAY FOR SOLAR DEVICE

Respondent should be most knowledgeable member on household electricity.

For each household, CAPI will 1) randomly assign a Tier 2 (high capacity: enough to power a television) or Tier 1 (low capacity: multiple light bulbs and mobile charging) solar home system; and 2) randomly select one of the three following amounts in the placeholder \${CF}: 33%, 66%, or 100% of the solar device in local currency. K. WILLINGNESS TO PAY FOR AN IMPROVED COOKSTOVE

This module should be asked to only households WITHOUT an improved cookstove (CAPI/enumerator check). The respondent should be the household member who most frequently cooks food for the household, as identified in A.12 OR the household member who decides to purchase the cookstove in I.4.

For each household, determine whether the primary fuel is wood (or crop residues), charcoal or neither (based on responses in Section H). Then randomly assign one of the four following improved cookstoves:

Fuelwood users – (1) Aspirational wood ICS available in country (2) Popular affordable wood ICS available in local market.

Charcoal users – (1) Aspirational charcoal ICS available in country (2) Popular affordable charcoal ICS available in local market.

(After a type of improved cookstove is randomly chosen, price of this type of cookstove will be assigned based on one of the three percentages of the reference price: 33%, 66% or 100%.)

K1a Does the household have an improved cookstove?

Yes...1 → L1

No....2

K.1	CAPI/ Enumerator: Recall responses to Section H (HOUSEHOLD FUEL CONSUMPTION) and record the most frequently used fuel. If not sure, ask respondent. Read options aloud		HH uses more fuelwood or crop residues than charcoal.....1 HH uses more charcoal than fuelwood or crop residues.....2 HH does not use any solid biomass (no charcoal, fuelwood or crop residues).....3 → L.1
K.2	Enumerator: Record Respondent ID for this section		Individual ID from Household Roster
Interview: [INSERT DESCRIPTION OF THE IMPROVED COOKSTOVE] Please, describe and explain the benefit of having ICS and the features of the assigned cookstove. This cookstove can reduce the smoke and fuel consumption significantly. Possibly, your cooking time per meal will be shortened since firepower of this cookstove is stronger than the traditional cookstove. As you answer the next few questions, keep in mind the various benefits from this device as well as your household budget.			
K.3	Would you be willing to purchase this cookstove at [CAPI: Price]?		Yes.....1 No.....2
