### Additional information

#### 2.1 Variable mismatches

- Variable *reason* does not appear in the questionnaire. The variable appears to identify the reason why the interview could not be completed with a specific individual, most likely the manager / supervisor. As it is not empty, it was left untouched in the data set.

#### Other Comments

- Tests p6, p8 and p9, described in the available STATA (c), all exhibit one error in their respective summations to 100 that cannot be edited with any confidence.
