

ESS 2002 Data Protocol

Edition 3, December 2002

NORWEGIAN SOCIAL SCIENCE DATA SERVICES

Introduction

The object of the ESS 2002 Data Protocol is to offer a comprehensive document with specifications and procedures to be used in the production of national ESS data files. The underlying principle is that resources put into the planning phase of an international survey result in national data of better quality and standardisation, which in turn will advance the release of the integrated (official ESS 2002) data files from the ESS data archive.

In general, the Data Protocol gives specifications for the coding of data, the production and delivery of data files and other electronic deliverables. Some of the specifications, for example coding standards, are found elsewhere on the ESS Archive Web Site.

The Data Protocol defines what the national teams are required to deposit to the data archive. If the content and quality of the electronic deliverables do not adhere to the specifications in the Data Protocol and the Archive Web Site, the archive reserves the right to ask for new deliverables.

Please read all sections of this Data Protocol. The first section (A), describes how the communication between the archive and the data providers is organised.

Section B, "Electronic deliverables", gives an overview of the files and documents the National coordinators are asked to deliver to the archive. Section B does also describe the more practical issues concerning data delivery, such as split delivery and common identifiers in the files. Please pay special attention to section B5 "Anonymised data", as this is a prerequisite for delivering data to the archive.

Section C of the Data Protocol deals with "principles of variable definitions". This section gives detailed information on the usage of missing values, how multiple responses are dealt with, as well as the rationale behind variable names, labels and categories.

The use of international standards are described in part D. To avoid the use of different versions of the same international standards across countries, the national teams are required to use the standards made available from the Archive Web Site.

Country specific variables and administrative variables are listed, explained and specified in section E, whereas section F contains tables of variable names and definitions for all data files.

Section G refers to programmes for applying labels, categories, and formats in SPSS and SAS. The programmes are available from the Archive Web Site.

Specifications for national Technical Summaries are found in section H of the Data Protocol.

Edition 3 of the Data Protocol is the final edition. The national teams will be informed by mail in case of future amendments.

Updates from Edition 2

B1. Deliverables, p. 6.

Updated list of electronic deliverables.

F1. Variable definitions, file 1: Main and supplementary questionnaires.

- Category 4 with value label added in D38, p. 31.
- Textual data from F49 and F55, pp. 44, 45. More detailed specification.

F.4. Variable definitions, file 4: Sampling data

Added (pp. 61-64)

F.6. Variable list

Variables from file 4 added.

H. National technical summary, p. 76.

Definitions for the National Technical Summary with guidelines and references to the ESS Archive Web Site.

A. Procedures for the collaboration between the national teams and NSD

The ESS Archive Web Site

The ESS Archive Web Site at <http://essdata.nsd.uib.no/> will be the central meeting place between NSD and the national teams during the data delivery and data processing phases of the project. One purpose of the Archive Web Site is to give all parties in the project easy access to the common set of tools and utilities which are expected to be used in the planning and production of the data files. Another purpose is to make the data processing at NSD as transparent as possible. By using the Archive Web Site, the national teams can control their data delivery, and audit NSD's data processing.

The procedures of data delivery, processing and audit will be as follows:

The NSD team and primary contact persons

The responsibility for the ESS 2002 data at NSD is shared by a team of persons who are trained in the processing of comparative survey data. Each ESS country will be assigned a primary contact person. This person will have the main responsibility for the production of the country's data files. The NSD team has a project email address, essdata@nsd.uib.no. When you send emails to your contact person, please address them to the project email address. In this way you can be sure that your emails are read even if your contact person is out of office.

Data deposit

When electronic deliverables (see section B) are ready for delivery to the archive, the National Coordinators are kindly asked to use Step 2 "Data deposit" on the Archive Web Site. When the transfer is successfully completed, the NSD team will automatically be notified by the system. The assigned contact person will shortly after get in touch with the national team confirming the delivery.

Data processing

Step 3 "Country data" on the Archive Web site gives the national teams access to the data processing catalogue of their country's data. All programmes, data files and output used in the processing will be available for download, making the archive's work as transparent as possible. The production and cleaning of data will be based on a dialog between NSD and the national teams. Whenever the processing involves decisions not specified in the standard procedures, the country's contact person(s) will be notified and asked for advice. Please be aware that if (parts of) the data files deviate too much from the specifications in this Data Protocol, the national team might be asked to make a new delivery containing corrected data.

Data validation

When the processing of data is completed, the national team will be notified and asked to download NSD's data processing report and drafts of the country's data files for validation. First when the processing has been approved by the national team can the files be finalised and included in the integrated files.

B. Electronic deliverables

The deadline for submitting **all** data and documentation files to the archive is **JANUARY 31st 2003**.

The National Coordinators are kindly asked to use Step 2 "Data deposit" on the Archive Web Site. The processing of various country data will be executed on a "first come first served basis". Countries which are able to deliver (parts of) the data before the deadline are strongly encouraged to do so, as it will advance the release of the official, integrated data files (see B2. *Split delivery*).

B1. Deliverables

The electronic deliverables to NSD include data files as well as text files documenting the national survey. When several files are submitted at the same time, please zip them into one file before uploading them to the archive. NSD expects to receive the data files with the Data Protocol variable names, labels and categories (see section G).

Deliverables	Possible file formats	Comment
Data files		
1. Main questionnaire and Supplementary questionnaire, with additional ESS variables.	<ul style="list-style-type: none">▪ SPSS system file▪ SPSS portable file▪ SPSS set up, reading raw data file▪ SAS set up, reading raw data file▪ SAS portable file	See sections F1 - F4 and G in Data Protocol, and Step 1 "Data definitions and programmes" on the web site for specifications of files
2. Interviewer questionnaire		
3. Contact form		
4. Sampling data		
5. Parent's occupation	<ul style="list-style-type: none">▪ Ascii text file	See section F5 for specification of file
Documents		
6. National technical summary	ESS form (recommended) Word Perfect Word Rich text format	See section H in Data protocol and Step 1 - "Technical Summary" on the web site
7. Main questionnaire	Word Perfect Word Rich text format Portable document file (Ascii text if txt is the only possible output from the CAPI system)	In all languages fielded in the country
8. Supplementary questionnaire		
9. Interviewer questionnaire		Please collect the show cards in one file (one file for each language fielded in the country)
10. Contact form		
11. Show cards		
12. Advance letters and other written information to the respondents		
13. Interviewer instructions		
14. If CAPI: CAPI programmes	Ascii text	

B2. Split delivery

To advance the release of the official ESS data files in 2003, NSD encourages the national teams (especially countries with field-work period ending in November and early December 2002) to split their delivery. We assume that the coding of verbatim recorded questions will by far be the most time consuming task, and that numeric data could be available weeks ahead of the post-coded data. Please give priority to the numeric data from the main and supplementary questionnaire(s). All other deliverables, however, are to be submitted within January 31th 2003.

B3. Common identifiers in data files

The five different data files should be prepared for merging. Therefore all files must have common identifiers, i.e. respondent's identification number and country code (see section E3). The national teams may deliver their data as separate files, or as one merged file, depending on what is most convenient in each country.

B4. Checking data

The national teams are asked to check and edit the data with respect to uniqueness and consistency of identification number(s), wild codes and data consistency. The final wild code checking should be done after the Data Protocol variable names, labels and categories have been applied to the national data files (see section G).

The minimum requirement is that all data verification and editing depending on access to questionnaires or CAPI files must be done prior to delivering the data to the archive.

The National Coordinators are asked to supply information about the cleaning procedures in the national Technical Summaries (see section H).

B5. Anonymised data

In accordance with data protection regulations in participating countries, only anonymised data will be made available to users. Before depositing data to NSD, each national team is responsible for checking their data with confidentiality in mind.

The checking of anonymity has to be done under the premise that all data files will be merged. Some standard precautions should be made to ensure that the ESS data files embody as much information as possible and still comply with the demands of confidentiality:

Basic precautions

File 1. Data from Main questionnaire and Supplementary questionnaire(s), with additional variables.

- a. Respondent identification number: if the number makes it possible to identify the respondent, or a geographical area with a small population, encrypt the number before deposit
- b. Region (country-specific variable): the categories of the variable should cover areas of large populations, and be in accordance with the requirements specified in section E2.

File 2. Interviewers' questionnaire

Precaution a.

File 3. Contact forms

Precaution a.

- c. Interviewer identification number(s): if the number(s) make(s) it possible to identify the interviewer(s) or a geographical area with a small population, encrypt the number before deposit

File 4. Sampling data

Precaution a.

- d. Identification number of primary and/or secondary sampling units: if the number makes it possible to identify the interviewer(s) or the respondent or a geographical area with a small population, encrypt the number before deposit

Further precautions

Even if all individual and geographical identifiers are encrypted, the dataset contains a lot of factual information about the respondent. Combining information about gender, age, household, region of residence, citizenship, country of origin, parents' geographical origin, language, four-digit occupation code, spouse's four-digit occupation code and textual information about parents' occupation might in some cases violate confidentiality. This depends on the population characteristics of the country and its regions, and anonymity must therefore be assessed at country level by each national team.

If anonymisation beyond the basic precautions (a-d) is necessary, it is recommended to use the following procedures in the following order:

- e. Rounding
- f. Substitution
- g. Cell suppression

Please contact NSD in case precautions e, f, or g is necessary.

C. Principles of variable definitions

C1. Missing values

Analysis of item non-response is an important part of quality control of survey items, and consistent use of missing values in the questionnaire and other documentation ensures uniform coding of skips in the interview. The aim is that the ESS data files will contain detailed information on item non-response.

The missing values in the data files are defined in the following way:

Not applicable: 6, 66, 666 etc., where the respondent has been routed away from the question. This will be coded automatically by those using CAPI, and by the archive for all others.

Refusals: 7, 77, 777 etc., where the respondent has explicitly refused. This should be coded by the interviewers whether they use CAPI or PAPI.

Important notice:

In some questions an explicit refusal code is available. Otherwise, "Refusal" shall not be included in the scale or the list of answer categories presented to the interviewer in the questionnaire:

1. Those using CAPI: Place "Refusal" as an option for the interviewer on the top menu of the screen (where many survey organisations also place Don't know).
2. Those using PAPI and manual registration of the questionnaires: Instruct the interviewers to write (an abbreviation of) "Refusal" at the item. Instruct the registration operators to write in the same number of 7s as there are 8s in "Don't know".
3. Those using PAPI and optical scanning of the questionnaires: The questionnaire should have an administrative column with a "refusal" box identifiable for the scanning programme.

Don't know: 8, 88, 888 etc. These codes are almost always available. They can be included in the list of answering options presented to the interviewers, or placed in administrative columns, menus etc., depending on the routines of the survey organisation.

No answer: 9, 99, 999 etc. are codes for missing data not elsewhere explained, for example respondent/interviewer errors and production/system errors. This will be coded automatically by those using CAPI, and by the archive for all others.

C2. Multiple responses and missing values

In general, we think of multiple response as the result of a "mark all that apply" question, or "mention all that you think of" in open-ended questions. Examples of multiple response questions are "In which countries have you been on holiday during the last five years?" (open) and "Here is a list of voluntary organisations. Please tell me which of these organisations you are a member of" (closed).

In the ESS 2002 data files, multiple response variables will have the values 0 "Not marked" and 1 "Marked". Each group of multiple response variables will have one or more additional dichotomous variables for missing values.

One example is question F35a, which results in the variables PDWRKP, EDCTNP, UEMPLAP, UEMPLIP, DSBLDP, RTRDP, CMSRVP, HSWRKP, DNGOTHP and

DNGDKP (Don't know), DNGNAPP (Not applicable, to be coded automatically in CAPI or by the archive for all others), DNGREFP (Refusal) and DNGNAP (No answer, to be coded automatically in CAPI or by the archive for all others). If the respondent does not have a partner, all variables will be assigned the value 0, except DNGNAPP (DOING LAST 7 DAYS, PARTNER: NOT APPLICABLE), which will be assigned the value 1. Correspondingly, if the respondent refuses to answer the question, DNGREFP should be coded as 1, the rest 0.

The following questions and variables are defined as multiple responses in the ESS 2002 questionnaires:

C17:

DSCRRCE - DSCRNA

E1a-12a:

SPTCNN - OTHVNA

F8a:

PDWRK - DNGNA

F35a:

PDWRKP – DNGNAP

I7:

PREWHP – PRENA

The criteria for defining multiple response questions in the ESS 2002 questionnaires are: 1) the respondent see a list of items about the same subject 2) refusals and don't knows item-by-item are most likely not expressed, but hidden by the fact that the respondent does not mention items.

One example is question F8a. If the respondent is permanently disabled, doing housework, but do not want to tell the interviewer that (s)he is disabled (in fact a refusal), the respondent will most likely mention "doing housework" and keep silent about "permanently sick or disabled".

The distinction between multiple response variables and ordinary variables is often subtle. One example is questions E1a – E12a in the ESS 2002 questionnaire. Respondents are asked about quite different aspects of their affiliation to organisations (against criterion 1), but the set-up of the question comply with criterion 2. To keep the data files as simple and robust as possible, the variables have been defined as multiple responses.

C3. Formats

The formats of variables are defined in the table in section F. All numeric variables in the ESS 2002 data files have the formats Fn.0, i.e. they are of width n and with no decimals. String variables have the formats An, "n" the number of characters.

The missing values often decide the format. If a routed variable have a scale from 1 to 5, there is room for "Not applicable" in value 6, and the variable will have the format F1.0. If the scale goes up to 6, the missing values have to begin at 66, and the format changes to F2.0.

C4. Variable names

The principles of variable definitions are bound by two factors: the limitations in statistical packages and the concern for user-friendly metadata. These factors limit the length of variable documentation included in the system files.

The CCT has decided to use *mnemonic* variable names in the data files. The argument is that about half of the questionnaire (the Core) will be replicated in 2004, and that we foresee the replication of rotating modules later on. By using mnemonic variable names, different datasets will have the same variable names, making it easier for both the users and the producers of series of cross-sectional surveys.

To ensure consistency in variable names, NSD has set up an internal guideline for abbreviations of frequently used concepts and words in questionnaires. The table below gives one example:

Concept	Abbreviation
Police	PLC
:	:
Trust	TRST/TST

Thus, question B9, "Trust in the police" becomes TRSTPLC.

In many statistical packages, the upper limit of variable names is eight characters. In order to allow for versions of variables, the limit in ESS is seven characters, leaving space for documenting versions with characters (A, B, C, etc.) as suffix.

C5. Variable labels and categories

The most commonly used statistical packages allow for up to 255 characters in variable labels, but in the ESS data files variable labels will be limited to 70 characters. One reason is that the user should be able to grasp the content "in one glance", another reason is the formatting of outputs from the statistical packages.

For the same reasons, categories (value labels) are limited to approximately 40 characters.

D. Standards and classifications

The Archive Web Site contains all coding standards and coding frames not documented in the source questionnaire or in this Data Protocol. All verbatim recorded questions *except F49 and F55* (see page 15, section E.1) have to be post-coded according to international standards found on the Archive Web Site. In addition, some questions with country-specific design and categories have to be recoded into a common ESS coding frame.

The coding frames on the Archive Web Site are compiled for use by the ESS 2002. They will remain fixed for the 2002 survey, and they are to be considered as the *only valid standards* for the ESS 2002.

D1. International standards

International standards have to be used in the post-coding of the following questions:

C19: CTZSHIP "CITIZENSHIP"

C21: CNTBRTH "COUNTRY OF BIRTH"

Standard: ISO 3166-1

Comment: The documents for download from the Archive Web Site includes two transitionally reserved code elements: "CS" for Czechoslovakia and "SU" for the USSR. These codes might be useful in C21.

C23: LNGHOMA "LANGUAGE MOST OFTEN SPOKEN AT HOME: FIRST MENTIONED"

LNGHOMB "LANGUAGE MOST OFTEN SPOKEN AT HOME: SECOND MENTIONED"

Standard: ISO 639-2

Comment: To simplify the coding of question C23, the most common language(s) in a country can be listed for each of the two items, and if necessary be recoded into the three-character ISO 639-2.

Example: In Slovenia, the answer "Slovenian" can be marked by a tick in the questionnaire, and then registered as "slv" or "1" (1 to be recoded to "slv").

F21–F23: ISCOCO "OCCUPATION, ISCO88 (COM)"

F37–F39: ISCOCOP "OCCUPATION PARTNER, ISCO88 (COM)"

Standard: ISCO88 (com)

Comment: The ESS 2002 questionnaire includes three questions to be used in the post-coding of occupation: title, description of work and qualifications needed (F21–F23 resulting in ISCOCO for respondent, F37–F39 resulting in ISCOCOP for partner).

In addition, F15 and F24 can be used in the post-coding of respondent's occupation. These two questions are particularly helpful in the coding of managers in the ISCO major group 1, distinguishing between large and small enterprises and between industries.

Note: Please read "A Guide for Users" (Elias and Birch 1994), available from Step 1 "Classifications and standards" on the Archive Web Site, as an introduction. This does also apply to countries already familiar with the ISCO (com). Every country must ensure that the national coding frame and transition table comply with the standard found on the Archive Web Site. The value labels/formats files described in section G can be used to check for compliance with the standard.

NB! The ISCO (com) standard includes codes on 1 - 4 digit levels, while the variables in the data file should have categories on four-digit level only (except Armed forces, code 100). Where no distinction is made below the level of major, sub-major or minor group, a corresponding

four-digit category should be achieved by the addition of trailing zeros (see Elias and Birch, p. 13). For example, if occupation is registered as 11 (Legislators and senior officials), the value in the data file should be 1100.

F24: NACER1 "INDUSTRY, NACE REV.1"

Standard: NACE Rev.1. 2-digit version.

Comment: See Archive Web Site.

D2. ESS 2002 Coding frames

Common ESS coding frames apply to the following questions:

C10: RLGDNM "RELIGION OR DENOMINATION BELONGING TO AT PRESENT"

C12: RLGDNME "RELIGION OR DENOMINATION BELONGING TO IN THE PAST"

Coding frame: ESS

Comment: See Archive Web Site

F6: EDULVL "HIGHEST LEVEL OF EDUCATION"

Coding frame: ISCED-97 slightly modified

Comment: Countries should use the best possible nationally designed question to establish the respondent's highest level of education. The data should then be re-coded into the common coding frame. See Archive Web Site.

F34: EDULVLP "PARTNER'S HIGHEST LEVEL OF EDUCATION"

F45: EDULVLF "FATHER'S HIGHEST LEVEL OF EDUCATION"

F51: EDULVLM "MOTHER'S HIGHEST LEVEL OF EDUCATION"

Comment: The categories of the questions about highest level of education for respondent's partner and parents in the source questionnaire are identical with the modified ISCED-97 frame for respondent. Countries can either use the frame as it is, or use national categories that can be re-coded into the frame if they prefer so.

E. Country-specific variables, variables from other sources than the questionnaires, and administrative variables

Country-specific variables are marked with the suffix xx in the variable name. Whenever a country-specific variable is included in a national data file, the xx suffix in the variable name should be substituted by the two-character country code of ISO 3166-1. The country codes for the participating countries in ESS 2002 are:

Austria	AT	Luxembourg	LU
Belgium	BE	Netherlands	NL
Czech Republic	CZ	Norway	NO
Denmark	DK	Poland	PL
Finland	FI	Portugal	PT
France	FR	Slovakia	SK
Germany	DE	Slovenia	SI
Greece	GR	Spain	ES
Hungary	HU	Sweden	SE
Ireland	IE	Switzerland	CH
Israel	IL	Turkey	TR
Italy	IT	United Kingdom	GB

Example: In section F of the Data Protocol and in the SPSS and SAS programmes, the variable name of country-specific highest level of education (question F6) is EDULVxx. If Germany and Poland include their country-specific variable on respondent's highest level of education in the data file, EDULVxx should be renamed to EDLVDE and EDLVPL, respectively.

The categories of the country-specific variables should be in English. The national Technical summary should include a short description of the electoral system, political parties, the education system and properties of the variable REGIONxx (see section H).

E1. Country-specific variables from the questionnaires

B14 PRTVTxx "PARTY VOTED FOR IN LAST NATIONAL ELECTION"

PRTVxx1 "PARTY VOTED FOR IN LAST NATIONAL ELECTION 1"

PRTVxxN "PARTY VOTED FOR IN LAST NATIONAL ELECTION N"

Please use country-specific categories in English.

These items need to be country-specific due to differences in electoral systems between countries. There will be two main groups of countries using different principles of organising the data:

i. Only one single vote registered.

ia. Countries where only one national-level election takes places.

Comment: None

ib. Countries where multiple national-level elections take place.

Comment: Please ask about the last election for the **primary legislative assembly**.

⇒ **Principle 1.** Countries belonging to group i. rename PRTVTxx, and use their national list of parties as categories. PRTVxx1 – PRTVxxN are **not** included in these data files.

ii. Two or more votes registered.

ii.a. Countries where voters have **more than one vote for the same assembly** (e.g. parallel and mixed member proportional systems; double ballot systems)

Comment: Please ensure that both/all votes are supplied.

ii.b. Countries using **preferential systems** (e.g. Single Transferable Vote or Alternative Vote).

Comment: Please provide first and second preference vote.

⇒ **Principle 2.** Ranking of votes possible: These countries use the variables PRTVxx1 – PRTVxxN to register the N votes. PRTVTxx is derived from PRTVTxx1 – PRTVxxN, and provided with a label documenting that the variable is derived. The national lists of parties are used as categories.

⇒ **Principle 3.** Ranking of votes **not** possible: Please use the variables PRTVxx1 – PRTVxxN to register the N votes and add their national list of parties as categories. The variable PRTVTxx is **not** included in these data files.

The table below sums up the principles:

Number of votes registered	Ranking of votes/preference	
	Possible	Not possible
Only one	Principle 1. Only PRTVTxx included	
Two or more	Principle 2. PRTVTxx (derived) and PRTVxx1 – PRTVxxN included	Principle 3. Only PRTVxx1 – PRTVxxN included

B25b PRTCLxx “WHICH PARTY FEEL CLOSER TO”

B27 PRTMBxx “MEMBER OF WHICH PARTY”

Please use country-specific categories in English.

F6 EDLVxx “HIGHEST LEVEL OF EDUCATION, [COUNTRY]”

If the national instrument provides important additional information compared to the ESS coding frame, please include the country-specific variable on respondent’s highest level of education. Only one country-specific variable is allowed. Please use country-specific categories in English.

All country-specific variables in the main questionnaire are to be included in File 1 (see section F.1).

F49 and F55. The main questionnaire includes questions about father’s and mother’s occupation when respondent was 14 years old (F49 and F55). These verbatim recorded questions are not required to be post-coded, but the answers should be registered as they are (in original language) in a separate text file to be archived at NSD (see section F.5).

E2. Country-specific variables from other sources than the questionnaires

REGIONxx “REGION”

The categories in REGION should meet the following demands:

- 1) They should be units where it is possible to attach contextual data (from national records/registers) and
- 2) The net sample of the geographical units must be representative and large enough for statistical analysis. Alternatively, please document how units can be grouped to fulfil this requirement.
- 3) The units have to be large enough to ensure anonymity of respondents.

It is recommended to use a level (or a grouping of a level) in The Nomenclature of Territorial Units for Statistics (NUTS), established by Eurostat, see

http://europa.eu.int/comm/eurostat/ramon/nuts/introduction_regions_en.html

To be included in File 1 (see section F.1)

E3. Administrative variables

IDNO "RESPONDENT'S IDENTIFICATION NUMBER"

Identifies the respondent uniquely in the national data files. In the integrated data files IDNO and **CNTRY** "COUNTRY" uniquely identify the respondent (see section E.4).

To be included in **all** data files.

Length of face-to-face interview, main questionnaire (A-F):

INWSHH "START OF INTERVIEW, HOUR"

INWSMM "START OF INTERVIEW, MINUTE"

INWEHH "END OF INTERVIEW, HOUR"

INWEMM "END OF INTERVIEW, MINUTE"

To be included in File 1 (see section F.1).

Date of face-to-face interview:

INWDD "DAY OF INTERVIEW"

INWMM "MONTH OF INTERVIEW"

INWYR "YEAR OF INTERVIEW"

To be included in File 1 (see section F.1)

SPLTADM "ADMINISTRATION OF SPLIT BALLOT AND MTMM"

The variable will identify in which design the respondent participated.

To be included in File 1 (see section F.1).

E4. Other variables

CNTRY "COUNTRY"

This variable's values are the two-character country codes in ISO 3166-1. In the Finnish data file, for example, the variable will have the value "FI". Please see table for the codes of countries participating in ESS 2002 at the beginning of this section.

In the integrated data files IDNO and CNTRY uniquely identify the respondent.

To be included in **all** data files (see section F).

F. Variable definitions in data files

Table F.1 – F.4 document the official formats and contents of the variables in the ESS 2002 data files. The tables document the question number, the variable label, format and categories of each variable. The last column has information about skips, coding standards etc. Please use the tables in this section and the source questionnaires simultaneously when setting up national questionnaires and data programmes.

Please bear in mind that the missing values codes 6, 66, 666 etc. and 9, 99, 999 etc. are automatically produced. They will be coded by those using CAPI, and by the archive for all others.

The same applies to multiple response variables for missing values. Thus, for countries **not** using CAPI, the following variables should be left out of the data files or by default assigned the value 0:

C17:

DSCRNAP "DISCRIMINATION OF RESPONDENT'S GROUP: NOT APPLICABLE"

DSCRNA "DISCRIMINATION OF RESPONDENT'S GROUP: NO ANSWER"

E1a-12a:

SPTCNA "SPORTS/OUTDOOR ACTIVITY CLUB, LAST 12 MONTHS: NO ANSWER"

CLTONA "CULTURAL/HOBBY ACTIVITY ORGANISATION, LAST 12 MONTHS: NO ANSWER"

TRUNA "TRADE UNION, LAST 12 MONTHS: NO ANSWER"

PRFONA "BUSINESS/PROFESSION/FARMERS ORGANISATION, LAST 12 MONTHS: NO ANSWER"

CNSONA "CONSUMER/AUTOMOBILE ORGANISATION, LAST 12 MONTHS: NO ANSWER"

HMNONA "HUMANITARIAN ORGANISATION ETC., LAST 12 MONTHS: NO ANSWER"

EPAONA "ENVIRONMENT/PEACE/ANIMAL ORGANISATION, LAST 12 MONTHS: NO ANSWER"

RLGONA "RELIGIOUS/CHURCH ORGANISATION, LAST 12 MONTHS: NO ANSWER"

PRTYNA "POLITICAL PARTY, LAST 12 MONTHS: NO ANSWER"

SETONA "SCIENCE/EDUCATION/TEACHER ORGANISATION, LAST 12 MONTHS: NO ANSWER"

SCLCNA "SOCIAL CLUB ETC., LAST 12 MONTHS: NO ANSWER"

European Social Survey 2002

SAMPLE DESIGN DATA FILE

This is the description of the data file needed regarding the sample design.

The file should contain one record for each selected address, in the case of address-based samples, or for each selected individual, in the case of individual-based (population register) samples. (In the rare event of a design in which where it is possible to select more than one household at an address, extra records will be needed for any extra households thus selected. At the time of writing, the only design of this sort is the Netherlands.)

Column 1: Name of the variable

Column 2: Short description of the variable - including logical relationship with other variables.

Column 3: Source of the variable.

S = initial office-based sample selection process

F = field-based sampling process (interviewers)

Column 4 : Reason for variable

W = For the construction of design weights

SE = For estimation of design effects and standard errors

The annex contains examples of how the variables should be interpreted for different types of sample design. It is suggested that you look closely at these examples. National co-ordinators may seek advice from their nominated member of the sampling expert panel if necessary.

Note on missing values: Use code 9 for items that are missing through interviewer error. This should apply only to certain items (F in column 3) in the case of address-based sampling. Use 'blank' for items that are not applicable (e.g. 3rd-stage probabilities, in the case of a 2-stage design). We assume that SPSS or SAS system files will be delivered.

NAME of variable	MEANING OF VARIABLE (label) and codes	I	Info
IDNO	Resopndents identification number (<i>same as in main datafile</i>) Code = number	X	SE
CNTRY	Country. Two character country code ISO3166-1	X	
MULTHNUM	Identification number of household on address. Extra code to distinguish between households/persons selected at the same address (<i>applies only to the Netherlands</i>) Code = 1, 2, ... (within IDNO)	X	SE
PROB1	Selection probability at first stage of sampling. Must be numeric > 0, with 12 decimal places (or as many as necessary to provide at least 4 significant figures for all cases). For multi-stage samples, all records with the same value of PSU should have the same value of PROB1.	S	W
PROB2	Only to be used if there are at least 2 stages of selection. Otherwise, PROB2 should be blank. Selection probability at second stage of sampling (conditional upon first stage). Must be numeric > 0, with 12 decimal places (or as many as necessary to provide at least 4 significant figures for all cases). All records with the same combination of PSU/SSU	S or F	W

	should have the same value of PROB2.		
PROB3	Only to be used if there are at least 3 stages of selection. Otherwise, PROB3 should be blank. Selection probability at third stage of sampling (conditional upon first two stages). Must be numeric > 0, with 12 decimal places (or as many as necessary to provide at least 4 significant figures for all cases).	F	W
PROB4	Only to be used if there are 4 stages of selection. Otherwise, PROB4 should be blank. Selection probability at fourth stage of sampling (conditional upon first 3 stages). Must be numeric > 0, with 12 decimal places (or as many as necessary to provide at least 4 significant figures for all cases).	F	W
PSU	To be used if there is more than 1 stage of selection. For 1-stage designs, PSU should be blank. Indicator of the first stage unit (primary sampling unit) to which the sample address/person belongs. Integral. Note that a key to this variable is NOT necessary. In other words, the PSUs can be completely anonymous.	S	SE
SSU	Only to be used if there are at least 3 stages and more than one 3 rd -stage unit is selected within each 2nd-stage unit (only Netherlands?). Otherwise, SSU should be blank. Indicator of the second stage unit (secondary sampling unit) to which the sample person belongs. Integral. Need only be unique within PSU.	S	SE
STRATEX1	Only to be used if explicit stratification was used to select the PSUs (independent selections from each stratum). Otherwise, STRATEX1 should be blank. Indicator of stage 1 explicit stratum to which the sample address/person's PSU belongs. All records with the same value of PSU should have the same value of STRATEX1.	S	SE
STRATIM1	Only to be used if implicit stratification was used to select the PSUs (systematic selections - possibly PPS - from an ordered list). Otherwise, STRATIM1 should be blank. Indicator of order on the list (order of selection) of the sample address/person's PSU. All records with the same value of PSU should have the same value of STRATIM1. All records with the same value of STRATIM1 should have the same value of PSU.	S	SE
STRATIM2	Only to be used if there were at least 3 stages and if implicit stratification was used to select the SSUs (systematic selections from an ordered list). Otherwise, STRATIM2 should be blank. Indicator of order on the list (order of selection) of the sample address/person's SSU within the PSU. All records with the same combination of PSU/SSU (if any) should have the same value of STRATIM2.	S	SE
STRTVAL1	Only to be used if implicit stratification was used to select the PSUs. Otherwise, STRATVAL1 should be blank. The numeric value of the (first) variable used to stratify PSUs.	S	SE

STRVAL2	Only to be used if implicit stratification was used to select the PSUs, based upon a combination of at least two variables. Otherwise, STRATVAL2 should be blank. The numeric value of the second variable used to stratify PSUs.	S	SE
STRVAL3	Only to be used if implicit stratification was used to select the PSUs, based upon a combination of at least three variables. Otherwise, STRATVAL3 should be blank. The numeric value of the third variable used to stratify PSUs.	S	SE

Annex: Examples

Example 1: Single-stage unclustered sample of persons selected from population register, stratified by region.

PROB1 = n/N for all records (n is number of persons selected, N is total eligible number on the register);

STRATEX1 = region indicator;

PROB2, PROB3, PROB4, PSU, TSU, STRATIM1, STRATIM2, STRATVAL1, STRATVAL2, STRATVAL3 blank for all records.

Example 2: Clustered sample of addresses within PSUs, with field selection of one person per address. PSUs selected PPS from an ordered list (order of population size within regions). Equal number of addresses selected from each PSU, systematically from a geographically-ordered list.

Notation: m PSUs selected out of M in population;

N_i addresses in i^{th} PSU, $\sum_{i=1}^M N_i = N$;

total of n addresses selected, i.e. n/m in each of m PSUs;

total number of eligible persons at k^{th} address is μ_k .

$$PROB1 = \frac{m \times N_i}{N}$$

$$PROB2 = \frac{n}{m \times N_i}$$

$$PROB3 = \frac{1}{\mu_k}$$

PSU = 1, 2, 3, m ;

STRATIM1 = 1, 2, 3, m in order PSUs were selected;

STRATIM2 = 1, 2, 3, n/m in order addresses were selected within PSU;

STRATVAL1 = region indicator;

STRATVAL2 = population size of the PSU;

PROB4, SSU, STRATEX1, STRATEX2, STRATVAL3 blank for all record

File 5. F49 Father's occupation and F55 Mother's occupation in main questionnaire.

F5. File 5, F49 Father's occupation and F55 Mother's occupation in main questionnaire.

The main questionnaire includes questions about father's and mother's occupation when the respondent was 14 years old (F49 and F55). These verbatim recorded questions are not required to be post-coded, but the answers should be registered as they are (in original language) in a separate text file to be archived at NSD.

The text file (ascii) can have different formats, but must contain IDNO "RESPONDENT'S IDENTIFICATION NUMBER" and preferably CNTRY "COUNTRY". Two examples of file formats:

Tab delimited format

The file has one record per respondent, IDNO<tab>CNTRY<tab>F49<tab>F55<ctrl-lf>

Record delimited format

The file has three records per respondent, the first record with fixed format

IDNO (Fn.0) CNTRY (A2)<ctrl-lf>F49<ctrl-lf>F55<ctrl-lf>

Table F.5. Variable list

F6. Variable list

File 1. Main and supplementary questionnaires

	IDNO	"RESPONDENT'S IDENTIFICATION NUMBER"
	CNTRY	"COUNTRY"
A1	TVTOT	"TV WATCHING, TOTAL TIME ON AVERAGE WEEKDAY"
A2	TVPOL	"TV WATCHING, NEWS/ POLITICS/CURRENT AFFAIRS ON AVERAGE WEEKDAY"
A3	RDTOT	"RADIO LISTENING, TOTAL TIME ON AVERAGE WEEKDAY"
A4	RDPOL	"RADIO LISTENING, NEWS/ POLITICS/CURRENT AFFAIRS ON AVERAGE WEEKDAY"
A5	NWSPTOT	"NEWSPAPER READING, TOTAL TIME ON AVERAGE WEEKDAY"
A6	NWSPPOL	"NEWSPAPER READING, POLITICS/CURRENT AFFAIRS ON AVERAGE WEEKDAY"
A7	NETUSE	"PERSONAL USE OF INTERNET/E-MAIL/WWW"
A8	PPLTRST	"MOST PEOPLE CAN BE TRUSTED OR YOU CAN'T BE TOO CAREFUL"
A9	PPLFAIR	"MOST PEOPLE TRY TO TAKE ADVANTAGE OF YOU, OR TRY TO BE FAIR"
A10	PPLHLP	"MOST OF THE TIME PEOPLE HELPFUL OR MOSTLY LOOKING OUT FOR THEMSELVES"
B1	POLINTR	"HOW INTERESTED IN POLITICS"
B2	POLCMPL	"POLITICS TOO COMPLICATED TO UNDERSTAND"
B3	POLACTIV	"COULD TAKE AN ACTIVE ROLE IN A GROUP INVOLVED WITH POLITICAL ISSUES"
B4	POLDACS	"MAKING MIND UP ABOUT POLITICAL ISSUES"
B5	PLTCARE	"POLITICIANS IN GENERAL CARE WHAT PEOPLE LIKE RESPONDENT THINK"
B6	PLTINVT	"POLITICIANS INTERESTED IN VOTES RATHER THAN PEOPLES OPINIONS"
B7	TRSTPRL	"TRUST IN COUNTRY'S PARLIAMENT"
B8	TRSTLGL	"TRUST IN THE LEGAL SYSTEM"
B9	TRSTPLC	"TRUST IN THE POLICE"
B10	TRSTPLT	"TRUST IN POLITICIANS"
B11	TRSTEP	"TRUST IN THE EUROPEAN PARLIAMENT"
B12	TRSTUN	"TRUST IN THE UNITED NATIONS"
B13	VOTE	"VOTED LAST NATIONAL ELECTION"
B14	PRTVTxx	"PARTY VOTED FOR IN LAST NATIONAL ELECTION"
	PRTVxx1	"PARTY VOTED FOR IN LAST NATIONAL ELECTION 1"
	PRTVxxN	"PARTY VOTED FOR IN LAST NATIONAL ELECTION N"
B15	CONPLT	"CONTACTED POLITICIAN OR GOVERNMENT OFFICIAL LAST 12 MONTHS"
B16	WRKPRTY	"WORKED IN POLITICAL PARTY OR ACTION GROUP LAST 12 MONTHS"
B17	WRKORG	"WORKED IN ANOTHER ORGANISATION OR ASSOCIATION LAST 12 MONTHS"
B18	BADGE	"WORN OR DISPLAYED CAMPAIGN BADGE/STICKER LAST 12 MONTHS"
B19	SGNPTIT	"SIGNED PETITION LAST 12 MONTHS"
B20	PBLDMN	"TAKEN PART IN LAWFUL PUBLIC DEMONSTRATION LAST 12 MONTHS"
B21	BCTPRD	"BOYCOTTED CERTAIN PRODUCTS LAST 12 MONTHS"
B22	BGHTPRD	"BOUGHT PRODUCT FOR POLITICAL/ETHICAL/ENVIRONMENT REASON LAST 12 MONTHS"
B23	DNTMNY	"DONATED MONEY TO POLITICAL ORGANISATION OR GROUP LAST 12 MONTHS"
B24	ILGLPST	"PARTICIPATED ILLEGAL PROTEST ACTIVITIES LAST 12 MONTHS"
B25a	CLSPRTY	"FEEL CLOSER TO A PARTICULAR PARTY THAN ALL OTHER PARTIES"
B25b	PRTCLxx	"WHICH PARTY FEEL CLOSER TO"
B25c	PRTDGCL	"HOW CLOSE TO PARTY"
B26	MMBPRTY	"MEMBER OF POLITICAL PARTY"
B27	PRTMBxx	"MEMBER OF WHICH PARTY"
B28	LRSCALE	"PLACEMENT ON LEFT RIGHT SCALE"
B29	STFLIFE	"HOW SATISFIED WITH LIFE AS A WHOLE"
B30	STFECO	"HOW SATISFIED WITH PRESENT STATE OF ECONOMY IN COUNTRY"
B31	STFGOV	"HOW SATISFIED WITH THE NATIONAL GOVERNMENT"
B32	STFDEM	"HOW SATISFIED WITH THE WAY DEMOCRACY WORKS IN COUNTRY"
B33	STFEDU	"STATE OF EDUCATION IN COUNTRY NOWADAYS"
B34	STFHLTH	"STATE OF HEALTH SERVICES IN COUNTRY NOWADAYS"
B35	DCLENV	"PREFERRED DECISION LEVEL OF ENVIRONMENTAL PROTECTION POLICIES"
B36	DCLCRM	"PREFERRED DECISION LEVEL OF FIGHTING AGAINST ORGANISED CRIME POLICIES"
B37	DCLAGR	"PREFERRED DECISION LEVEL OF AGRICULTURAL POLICIES"
B38	DCLDEF	"PREFERRED DECISION LEVEL OF DEFENCE POLICIES"
B39	DCLWLF	"PREFERRED DECISION LEVEL OF SOCIAL WELFARE POLICIES"
B40	DCLAID	"PREFERRED DECISION LEVEL OF POLICIES ABOUT AID TO DEVELOPING COUNTRIES"
B41	DCLMIG	"PREFERRED DECISION LEVEL OF IMMIGRATION AND REFUGEES POLICIES"
B42	DCLINTR	"PREFERRED DECISION LEVEL OF INTEREST RATES POLICIES"
B43	GINVECO	"THE LESS GOVERNMENT INTERVENES IN ECONOMY, THE BETTER FOR COUNTRY"
B44	GINCDIF	"GOVERNMENT SHOULD REDUCE DIFFERENCES IN INCOME LEVELS"

G. Programmes for applying Data Protocol variable names, labels and categories

To assist the data producers, and ensure as consistent and harmonized data as possible, NSD offers SPSS and SAS programmes with the official ESS variable names, labels, categories and formats. The programmes can be downloaded from Step 1 "Data definitions and programmes" on the Archive Web Site. Please apply the Data Protocol variable names, labels and categories to the data files before you submit them to the archive.

The package of programmes includes the following syntax/dictionary files (the programmes for the Sampling data file will be provided later):

SPSS

ESSms.sps	Main and supplementary questionnaires, variable names, labels and value labels, syntax
ESSms.por	Main and supplementary questionnaires, dictionary
ESSi.sps	Interviewer's questionnaire, variable names, labels and value labels, syntax
ESSi.por	Interviewer's questionnaire, dictionary
ESScf.sps	Contact forms, variable names, labels and value labels, syntax
ESScf.por	Contact forms, dictionary
ESSstandards.sps	Value labels for ISCO (com), NACE Rev.1, ISO 3166-1 and ISO 639-2, syntax

SAS

ESSms.sas	Main and supplementary questionnaires, variable names, labels and assignment of formats
ESSi.sas	Interviewer's questionnaire, variable names, labels and assignment of formats
ESScf.sas	Contact forms, variable names, labels and assignment of formats
ESSformats.sas	Definition of formats, all data files
ESSstandards.sas	Formats for ISCO (com), NACE Rev.1, ISO 3166-1 and ISO 639-2

Comment to ESSstandards.sps/sas:

If the survey organisation does not have programmes for checking wild codes in the variables:

CTZSHIP "CITIZENSHIP"

CNTBRTH "COUNTRY OF BIRTH"

LNGHOMA "LANGUAGE MOST OFTEN SPOKEN AT HOME: FIRST MENTIONED"

LNGHOMB "LANGUAGE MOST OFTEN SPOKEN AT HOME: SECOND MENTIONED"

ISCOCO "OCCUPATION, ISCO88 (COM)"

NACER1 "INDUSTRY, NACE REV.1"

ISCOCOP "OCCUPATION PARTNER , ISCO88 (COM)"

the value labels/formats in ESSstandards.sps/sas can be added to File 1 to facilitate proof-reading (spotting of empty labels in frequency tables).

H. National technical summary

The meta data documentation will be an important part of the high quality data from the European Social Survey. The meta data documentation will need input from several groups of people engaged in the ESS.

The National Co-ordinators (NCs) will have a central role in providing national technical summaries for the meta data documentation. NSD has therefore made an electronic form for the NCs to download, fill in and deposit to NSD along with the other electronic deliverables. The electronic form can be downloaded from the ESS Archive Web Site (See Step 1 once logged in to the Archive Web Site).

NSD recommends the use of the electronic form, but for those who prefer to write their own report a Word document (National Technical Summary Elements) specifying the required information for the national technical summary report, is available for download from the ESS Archive Web Site.

Please save the national technical summary file as Ntech2002xx, where xx is the country code as specified in Section E (page 14).
