

ESS 2008 Data Protocol

Edition 1.2, October 2008

NORWEGIAN SOCIAL SCIENCE DATA SERVICES

Introduction

The object of the ESS 2008 Data Protocol is to offer a comprehensive document with specifications and procedures to be used in the production of national ESS data files. The underlying principle is that resources put into the planning phase of an international survey result in national data of higher quality and standardisation, which in turn will advance the release of the integrated (official ESS 2008) data files from the ESS Data web site, <http://ess.nsd.uib.no>.

In general, the Data Protocol gives specifications for the coding of data, the production and delivery of data files and other electronic deliverables. Some of the specifications, for example coding standards, are found elsewhere on the ESS Archive web site, <http://essdata.nsd.uib.no/>.

The Data Protocol defines what the national teams are required to deposit to the ESS Archive. If the content and quality of the electronic deliverables do not adhere to the specifications in the Data Protocol and the ESS Archive web site, the archive reserves the right to ask for new deliverables.

Please read all sections of this Data Protocol. The first section A describes how the communication between the archive and the data providers is organised.

Section B, "Electronic deliverables", gives an overview of the files and documents the National Coordinators are asked to deliver to the archive. Section B does also describe the more practical issues concerning data delivery, such as common identifiers in the files. Please pay special attention to section B7 "Anonymised data".

Section C of the Data Protocol deals with "principles of variable definitions". This section gives detailed information on the usage of missing values, how multiple responses are dealt with, as well as the rationale behind variable names, labels and categories. Please pay special attention to the coding of "Refusals" in section C1.

The use of international standards is described in section D. To avoid the use of different versions of the same international standards across countries, the national teams are required to use the standards made available from the ESS Archive web site.

Country specific variables and administrative variables are listed, explained and specified in section E, whereas section F contains tables of variable names and definitions for all data files. Section F4 is a flowchart documenting the routings in the ESS Core part of the questionnaire.

Section G refers to programmes for applying labels, categories, and formats in SPSS and SAS. The programmes will be made available from the ESS Archive web site.

Information about National Technical Summaries (NTS) are found in section H of the Data Protocol.

The national teams will be informed by e-mail when the Data Protocol and the ESS Archive web site are updated.

Updates from previous editions

From Edition 1.1 to 1.2

Changes in variable names

The names of the following variables have been changed to reflect changes in the country standard (ISO 3166-1) compared to the standard used in ESS3:

C27: CTZSHIPA changed to CTZSHIPB.

C29: CNTBRTHA changed to CNTBRTHB.

C34: FBRNCNT changed to FBRNCNTA.

C36: MBRNCNT changed to MBRNCNTA.

F32 HINCTNTA, pp. 4 and 17

The variable name for HINCTNTA was misspelled in the chapters concerning changes from the ESS3 protocol and country-specific variables, and has now been corrected. Previous versions of the ESS4 protocol used the correct variable name in Tables F.1 and F.5.

Headers in Table F.3. (Contact forms)

Typos corrected in the headers of Table F.3., documenting contact form variables:

"^: Question changed since ESS2" has been corrected to "Question changed since ESS3".

"~: New question" has been added to header where relevant.

The corresponding modified programmes(dictionaries) are available from "Data protocol and variable definitions" at <http://essdata.nsd.uib.no/>

From Edition 1.0 to 1.1

E4 AGRPBL, p.35

Amended wording of the hidden code 55.

E10 P20CUST and E13 P70CUST, p.36

Added hidden code 55 "Have no effect at all".

E55 SRDSCAG, p.40

Added hidden code 6 "There is no age discrimination at all in [country].

F23 TPORGWK, p.45

New answer categories and format (F2.0).

Main changes from the ESS round 3 Data protocol

New deliverables: Raw data
 Sample design data file (SDDF)
 Country specific variables on religion and education

In ESS round 4 National Co-ordinators (NC's) are asked to deliver raw data to the ESS data archive at NSD. This is in recognition of the large amount of resources put into the collection of the ESS data, and is meant as an ultimate backup. Furthermore, it gives the archive the possibility to go back and check if problems with the data are to surface at a later date. The sample design data files (SDDF) are in ESS round 4 also to be deposited to NSD. NSD's licence for storing these data will be valid for all EU and the EEA countries. More information on data privacy issues can be found in section B8.

In ESS round 4 the following new country specific variables should be deposited: RLGDNXX; Religious denomination at present, RLGDEXX; religious denomination in past and EDLVXX; level of education. This also applies if national instruments are used in measuring the highest level of education for partner (EDLVPXX), father (EDLVFXX) and mother (EDLVMXX). More information on the country specific data can be found in section E.

New instrument: Household income: HINCTNTA

In ESS round 4 a different method of measuring household income has been introduced. The categories are now national categories based on deciles of the actual household income range in the given country. The deciles should be derived from the best available source for the country. A showcard must always be used for this question. More information on the instrument measuring household income can be found in section E. Queries should be referred to ess@city.ac.uk

A. Procedures for the collaboration between the national teams and NSD

The ESS Archive web site

The ESS Archive web site at <http://essdata.nsd.uib.no/> will be the central meeting place between NSD and the national teams during the data delivery and data processing phases of the project. One purpose of the ESS Archive web site is to give all parties in the project easy access to the common set of tools and utilities which are used in the planning and production of the data files. Another purpose is to make the data processing at NSD as transparent as possible. By using the ESS Archive web site, the national teams can control their data delivery, and audit NSD's data processing.

The NSD team and primary contact persons

The responsibility for the ESS 2008 data at NSD is shared by a team of persons who are trained in the processing of comparative survey data. Each ESS country will be assigned a primary contact person. This person will have the main responsibility for the production of the country's data files. The NSD team has a project email address, essdata@nsd.uib.no. When you send emails to your contact person, please address them to the project email address. This will ensure that your emails are read even if your contact person is out of office.

Data deposit

When electronic deliverables (see section B) are ready for delivery to the archive, the National Team are kindly asked to use the "Data deposit" option on the ESS Archive web site. When the transfer is successfully completed, the NSD team will automatically be notified by the system. NSD will shortly after get in touch with the national team confirming the delivery.

Data processing

The "View archive processing" option on the ESS Archive web site gives the national teams access to the data processing catalogue of their country. All programmes, data files and output used in the processing will be available for download, making the archive's work as transparent as possible. The production and cleaning of data will be based on a dialog between NSD and the national teams. Whenever the processing involves decisions not specified in the standard procedures, the national team will be notified and asked for advice. Processing will be done in two steps, each followed by a report documenting the results.

Please be aware that if (parts of) the data files or documentation deviate too much from the specifications in the Data Protocol, the national team might be asked to make a new delivery containing corrected data and/or documentation.

Data validation

When the processing of data is completed, the national team will be notified and asked to download NSD's data processing report and drafts of the country's data files for validation. Only when the processing has been approved by the national team can the files be finalised and included in the integrated files.

Please be aware that the draft file from NSD will be a trial dataset made available in confidence for the National Co-ordinator, so that preliminary analyses may be undertaken as a means of 'testing' the data in advance of their widespread distribution. The file should be available only to persons who have been registered by the CCT as members of the National Co-ordinator's team.

B. Electronic deliverables

The deadline for submitting *all* data and documentation files to the archive is **JANUARY 31st 2009**.

The National Teams are kindly asked to use the ESS Archive web site to deposit their files. All national data files that arrive fully documented and in adherence with the specifications of the Data Protocol, within the deadline, will be included in the first release of the integrated data file in September 2009. The processing of various country data arriving after the deadline will be executed on a "first come first served basis".

B1. Deliverables to NSD

The electronic deliverables to NSD include data files as well as text files documenting the national survey. When several files are submitted at the same time, please zip them into one file before uploading them to the ESS Archive. The data files should be delivered with variable names, labels and categories as specified in the Data Protocol (see section F and G).

Deliverables	Possible file formats	Comment
Data files		
1. Main and Supplementary questionnaire, with additional ESS variables. 2. Interviewer questionnaire 3. Contact form	<ul style="list-style-type: none"> • SPSS system file • SPSS portable file • SPSS set up, reading data file • SAS system file, Windows • SAS portable file • SAS set up, reading data file 	See sections F1 - F3 and G in Data Protocol, and "Data protocol and variable definitions" under <i>Prepare data</i> on the ESS Archive web site for specifications of files
4. Parents' occupation	<ul style="list-style-type: none"> • Same as 1-3, Delimited text format possible for verbatim recorded answers 	See section B2 for specification of file
5. Raw data		See section B3 for specification of file
6. Sample design data file (SDDF)		See section B4 for specification on file
Documents		
5. National technical summary	<ul style="list-style-type: none"> • PDF form (recommended) • Word Processing Format 	See section H in Data protocol and "Survey documentation" under <i>Prepare data</i> on the ESS Archive web site
6. Population statistics 7. Main questionnaire 8. Supplementary questionnaire 9. Interviewer questionnaire 10. Contact form 11. Show cards	<ul style="list-style-type: none"> • Word Processing Format • ASCII text if txt is the only possible output from the CAPI system 	In all languages fielded in the country
12. Interviewer and fieldwork instructions 13. Advance letters, brochures and other written information to the respondents	<ul style="list-style-type: none"> • Word Processing Format • PDF 	Please compile the show cards in one file (one file for each language fielded in the country)
14. If CAPI: CAPI programmes	ASCII text	

B2. File 4: Parents' occupation

The main questionnaire includes questions about father's and mother's occupation when the respondent was 14 years old (F53 and F59). These verbatim recorded answers are not required to be post-coded, but can also be registered as string variables (in original language), and should be deposited in a separate file to be archived at NSD.

The file can have different formats, preferably SPSS or SAS, but delimited text files or spreadsheets can also be used. However, please make sure that the files can be transferred to a SPSS.por file. The files must contain, in addition to the two verbatim variables, the variables IDNO "RESPONDENT'S IDENTIFICATION NUMBER" and CENTRY "COUNTRY".

B3. Raw data

In addition to the anonymised and processed data files, the raw data are to be uploaded to the ESS archive web site. By raw data we mean data as they were keyed, either in your capi system or from the questionnaires. If the verbatim recorded answers in F22, F24, F25, and F25a are available in electronic format, please include them in your deposit. The preferred file formats for keyed raw data will be the same as for files 1 to 3, verbatim recorded answers can be delivered either in SPSS or SAS, or in delimited text format.

B4. Specifications and deposit of Sample design data files (SDDF)

The ESS Sampling team is responsible for the specifications and processing of the Sample design data files, and the co-operation will be organised directly between the national team and their contact person in the Sampling team. The Sample design data files are, however, to be uploaded to the ESS Archive web site, and the deposit of these data are mandatory. The ESS round 4 data deposit will not be regarded as complete without this file.

B5. Common identifiers in data files

The files deposited to NSD should be prepared for merging, therefore all files must have common identifiers, i.e. respondents' identification number and country code (see section E2). The national teams may deliver their data as separate files, or as one merged file, depending on what is most convenient in each country.

B6. Checking data

The national teams are asked to check and edit the data with respect to uniqueness and consistency of identification number(s), wild codes and data consistency. The final wild code checking should be done after the Data Protocol variable names, labels and categories have been applied to the national data files (see section G).

The minimum requirement is that all data verification and editing depending on access to questionnaires or CAPI files must be done prior to delivering the data to the ESS Archive.

The National teams are asked to supply information about the coding and cleaning procedures in the national Technical Summaries (see section H).

B7. Anonymised data, files 1-4

In accordance with data protection regulations in participating countries, only anonymised data will be made freely available to users. Before depositing data to NSD, each national team is responsible for checking their data with confidentiality in mind. The national teams will be asked to confirm in their National Technical Summary that the data have been anonymised in accordance with national or EU regulations on protection of individuals with regard to the processing of personal data (see http://ec.europa.eu/justice_home/fsj/privacy/).

The checking of anonymity has to be done under the premise that all four data files will be merged. Some standard precautions should be made to ensure that the ESS data files embody as much information as possible and still comply with the demands of confidentiality:

Basic precautions

File 1. Data from Main questionnaire and Supplementary questionnaire, with additional variables.

- a. IDNO - Respondent identification number: if the number makes it possible to identify the respondent, or a geographical area with a small population, encrypt the number before deposit
- b. REGIONxx - Region (country-specific variable): the categories of the variable should cover areas of large populations, and be in accordance with the requirements specified in section E1.4.

File 2. Interviewer's questionnaire

- a. See above
- c. INTNUM - Interviewer identification number: if the number makes it possible to identify the interviewers or a geographical area with a small population, encrypt the number before deposit.

File 3. Contact forms

- a. See above
- c. See above

File 4. Parents' occupation

- a. See above
- d. Please remember that the files will be merged and that anonymity must be ensured also when the file is linked to other variables. The removal of county, city, or company names are an important factor in the anonymisation of these data.

Further precautions

Even if all individual and geographical identifiers are encrypted, the dataset contains a lot of factual information about the respondent. Combining information about gender, age, household, region of residence, citizenship, country of origin, parents' geographical origin, language, four-digit occupation code, spouse's four-digit occupation code and textual information about parents' occupation might in some cases violate confidentiality. This depends on the population characteristics of the country and its regions, and anonymity must therefore be assessed at country level by each national team.

If anonymisation beyond the basic precautions (a-d) is necessary, it is recommended to use the following procedures in the following order:

- e. Rounding
- f. Substitution
- g. Cell suppression

Please contact NSD in case precautions e, f, or g is necessary.

B8. Deposit of indirectly identifiable data, files 5 and 6.

Sample design data files (SDDF) and Raw Data

NSD are aware that not all SDDF data and raw data can be completely anonymised. NSD will obtain a license for handling these data from the Norwegian Data Inspectorate.

All EU and EEA countries are covered by this licence. If you are in doubt how this effects the deposit of your country's sample design data file and/or raw data, please contact NSD.

Storage and dissemination

The indirectly identifiable data will be stored in a safe environment not connected to any internal or external networks. Researchers can apply for temporary access to the data for research purposes. Access will only be given under strict confidentiality regulations, following the EU data directives.

C. Principles of variable definitions

C1. Missing values

Analysis of item non-response is an important part of quality control of survey items, and consistent use of missing values in the questionnaire and other documentation ensures uniform coding of skips in the interview. The aim is that the ESS data files will contain detailed information on item non-response.

The missing values in the data files are defined in the following way:

Not applicable: 6, 66, 666 etc., where the respondent has been routed away from the question. This missing value might be coded in the national data files before deposit, but the coding will be overwritten by standardised procedures at NSD.

Refusals: 7, 77, 777 etc., where the respondent has explicitly refused. This should be coded by the interviewers whether they use CAPI or PAPI.

Important notice:

In some questions an explicit refusal code is available. Otherwise, "Refusal" shall not be included in the scale or the list of answer categories presented to the interviewer in the questionnaire:

1. Those using CAPI: Place "Refusal" as an option for the interviewer, for example on the top menu of the screen where "Don't know" is usually placed.
2. Those using PAPI and manual registration of the questionnaires: Instruct the interviewers to write (an abbreviation of) "Refusal" at the item. Instruct the registration operators to write in the same number of 7s as there are 8s in "Don't know".
3. Those using PAPI and optical scanning of the questionnaires: The questionnaire should have an administrative column with a "refusal" box identifiable for the scanning programme.

Don't know: 8, 88, 888 etc. These codes are almost always available. They can be included in the list of answering options presented to the interviewers, or placed in administrative columns, menus etc., depending on the routines of the survey organisation.

No answer: 9, 99, 999 etc. are codes for missing data not elsewhere explained, for example respondent/interviewer errors and production/system errors. This missing value might be coded in the national data files before deposit, but the coding will be overwritten by standardised procedures at NSD. In administrative variables and interviewer codes, 9, 99, 999 etc. are labelled "Not available".

C2. Multiple responses and missing values

In general, we think of multiple response as the result of a "mark all that apply" question, or "mention all that you think of" in open-ended questions. Examples of multiple response questions are "In which countries have you been on holiday during the last five years?" (open) and "Here is a list of voluntary organisations. Please tell me which of these organisations you are a member of" (closed).

In the ESS 2008 data files, multiple response variables will have the values 0 "Not marked" and 1 "Marked". Each group of multiple response variables will have one or more additional dichotomous variables for missing values.

One example is question F37a about what partner has been doing last 7 days, which results in the variables DWRKP, EDCTNP, UEMPLAP, UEMPLIP, DSBLDP, RTRDP, CMSRVP, HSWRKP, DNGOTH, DNGDKP (Don't know) AND DNGREFP (Refusal). In addition, DNGNAPP (Not applicable) and DNGNAP (No answer) will be included in the data file. DNGNAPP and DNGNAP will be overwritten by standardised procedures at NSD, but can either be coded, or assigned the value 0 (zero) or system missing in the national data files. In countries where CMSRVP is not applicable, the variable should be assigned the value 0 (zero) or system missing.

If the respondent does not have a partner, all variables will be assigned the value 0, except DNGNAPP (DOING LAST 7 DAYS, PARTNER: NOT APPLICABLE), which will be assigned the value 1. Correspondingly, if the respondent refuses to answer the question, DNGREFP should be coded as 1, the rest 0.

The following questions and variables are defined as multiple responses in the ESS 2008 questionnaires. Please ensure that the PROBE/PROMPT/"Code all that apply" instructions to the interviewers are included in the questionnaire.

C25:

DSCRRCE - DSCRNA

F8a:

PDWRK - DNGNA

F37a:

PDWRKP – DNGNAP

I6:

PREWHP – PRENA

If not applicable, **F8a**: CMSRV “DOING LAST 7 DAYS: COMMUNITY OR MILITARY SERVICE” and **F37a**: CMSRVP “PARTNER DOING LAST 7 DAYS: COMMUNITY OR MILITARY SERVICE” should be assigned the value 0 (zero) or system missing.

C3. Formats

The formats of variables are defined in the tables in section F. All numeric variables in the ESS 2008 data files have the formats Fn.0, i.e. they are of width n and with no decimals. String variables have the formats An, with “n” assigning the number of characters.

The missing values often decide the format. If a routed variable have a scale from 1 to 5, there is room for “Not applicable” in value 6, and the variable will have the format F1.0. If the scale goes up to 6, the missing values have to begin at 66, and the format changes to F2.0.

C4. Variable names

The principles of variable definitions are bound by two factors: the limitations in statistical packages and the concern for user-friendly metadata. These factors limit the length of variable documentation included in the data files.

The CCT has decided to use *mnemonic* variable names in the data files. The argument is that about half of the questionnaire (the Core) is replicated in all rounds of the ESS, and that we expect the replication of rotating modules later on. By using mnemonic variable names, different data files contain the same variable names for identical questions, making it easier for the users as well as the producers of cumulative files for several ESS rounds.

To ensure consistency in variable names, NSD has set up an internal guideline for abbreviations of frequently used concepts and words in questionnaires. The table below gives one example:

Concept	Abbreviation
Police	PLC
:	:
Trust	TRST/TST

Thus, question B6, “Trust in the police” becomes TRSTPLC.

In many statistical packages, the upper limit of variable names is eight characters. In order to allow for versions of a variable, the limit in ESS is seven characters, leaving space for documenting new versions of the variable with characters (A, B, C, etc.) as suffix. For example, between ESS round 1 and 2 the variable WRKCTR “Employment contract unlimited or limited duration” was changed to WRKCTRA, due to a new category that was added.

C5. Variable labels and categories

The most commonly used statistical packages allow for up to 255 characters in variable labels, but in the ESS data files variable labels will be limited to approximately 70 characters. One reason is that the user should be able to grasp the content “in one glance”; another reason is the formatting of outputs from the statistical packages.

For the same reasons, categories (value labels) are limited to approximately 40 characters.

D. Standards and classifications

The ESS Archive web site at <http://essdata.nsd.uib.no/> contains all coding standards and coding frames not documented in the source questionnaire or in the Data Protocol. All verbatim recorded answers *except F53 and F59* (see section E1.5) have to be post-coded according to international standards found on the ESS Archive web site. In addition, some questions with country-specific design and categories have to be recoded into a common ESS coding frame.

The coding frames available on the ESS Archive web site are compiled for use by the ESS 2008. They will remain fixed for the 2008 survey, and they are to be considered as the *only valid standards* to be used.

D1. International standards

International standards have to be used in the post-coding of certain questions:

D1.1 ISO 3166-1, Country

C27: CTZSHIPB "CITIZENSHIP"

C29: CNTBRTHB "COUNTRY OF BIRTH"

C34: FBRNCNTA "COUNTRY OF BIRTH, FATHER"

C36: MBRNCNTA "COUNTRY OF BIRTH, MOTHER"

Format: A2

Comment: Revised standard for ESS4. The documents for download from the ESS Archive web site also includes six transitional code elements added by NSD: "01" for DDR, "02" for USSR, "03" for Czechoslovakia, "04" for Yugoslavia, "05" for East Timor and "06" for Serbia and Montenegro.

D1.2 ISO 639-2, Language

C31: LNGHOMA "LANGUAGE MOST OFTEN SPOKEN AT HOME: FIRST MENTIONED"

LNGHOMB "LANGUAGE MOST OFTEN SPOKEN AT HOME: SECOND MENTIONED"

I7: INTLNG "INTERVIEW QUESTIONNAIRE LANGUAGE"

Format: A3

Comment: Standard also used in ESS3. To simplify the coding of question C31, the most common language(s) in a country can be listed for each of the two items, and if necessary be recoded into the three-character ISO 639-2.

Example: In Slovenia, the answer "Slovenian" can be marked by a tick in the questionnaire, and then registered as "slv" or "1" ("1" later to be recoded to "slv" before deposit).

D1.3 ISCO88 (com), Occupation

F24–F25a: ISCOCO "OCCUPATION, ISCO88 (COM)"

F39-F41: ISCOPOP "OCCUPATION PARTNER, ISCO88 (COM)"

Format: F5.0 (4-digit coding of occupations, missing values having the format F5.0)

Comment: Standard also used in ESS3. The ESS 2008 questionnaire includes three questions to be used in the post-coding of occupation: title, description of work and qualifications needed (F24-F25a resulting in ISCOCO for respondent, F39-F41 resulting in ISCOPOP for partner).

In addition, F15 and F22 should be used in the post-coding of respondent's occupation. These two questions are particularly helpful in the coding of managers in

the ISCO major group 1, distinguishing between large and small enterprises and between industries.

Notes: For an introduction, please read "A Guide for Users" (Elias and Birch 1994), available at the ESS Archive web site through "Standards for post coded variables". This does also apply to countries already familiar with the ISCO (com). Every country must ensure that the national coding frame and transition table comply with the standard found on the ESS Archive web site. The value labels/formats files described in section G can be used to check for compliance with the standard.

The ISCO (com) standard includes codes on 1, 2, 3 and 4 digit levels, while the variables in the data file should have categories on four-digit level only (except Armed forces, code 100). Where no distinction is made below the level of major, sub-major or minor group, a corresponding four-digit category should be achieved by the addition of trailing zeros (see Elias and Birch, p. 13). For example, if occupation is registered as 11 (Legislators and senior officials), the value in the data file should be 1100.

D1.4 NACE Rev.1.1 (2-digit version), Industry

F22: NACER11 "INDUSTRY, NACE REV.1.1"

Format: F3.0 (2-digit coding of industry, missing values having the format F3.0)

Comment: Standard also used in ESS3.

D2. ESS Coding frames

Common ESS coding frames apply to the following questions:

D2.1 Coding frame - Religion

C18: RLGDNM "RELIGION OR DENOMINATION BELONGING TO AT PRESENT"

C20: RLGDNME "RELIGION OR DENOMINATION BELONGING TO IN THE PAST"

Comment: Coding frame also used in ESS3. See ESS Archive web site. Please use the coding and bridging agreed upon with the archive in the sign off process. If a country specific instrument is used, the country specific variables should be deposited.

D2.2 ESS Coding frame (modified ISCED-97) - Education

F6: EDULVL "HIGHEST LEVEL OF EDUCATION"

Comment: Coding frame also used in ESS3. Countries should use the best possible nationally designed question(s) to establish the respondent's highest level of education. The data should then be re-coded into the common coding frame. See ESS Archive web site. Please use the coding and bridging agreed upon with the archive in the consultation process.

Notes: National measurements must when necessary be adjusted to ensure complete coverage of relevant categories in EDULVL.

Please read the UNESCO's Operational Manual (which can be downloaded from the ESS Archive web site) before re-coding.

F36: EDULVLP "PARTNER'S HIGHEST LEVEL OF EDUCATION"

F49: EDULVLF "FATHER'S HIGHEST LEVEL OF EDUCATION"

F55: EDULVLM "MOTHER'S HIGHEST LEVEL OF EDUCATION"

Comment: The categories of the questions about highest level of education for respondent's partner and parents in the source questionnaire are identical with the ESS coding frame for the respondent. Countries can use the frame as it is, but are strongly

recommended to use national categories and to re-code these into the frame, the same way it was done for respondent's education. If so please note that the country specific variables should be deposited to the archive together with the ESS standard variables.

E. Country-specific, identification and administrative variables

E1. Country-specific variables

E1.1 Naming and use of suffix

Country-specific variables are marked with the suffix xx in the variable name. Whenever a country-specific variable is included in a national data file, the xx suffix in the variable name should be substituted by the two-character country code of ISO 3166-1. Country specific variables in ESS4 are:

PRTVTxx (B12), (PRTVxx1- PRTVxxN if more than one national election)
 PRTCLxx (B20b)
 PRTMBxx (B22)
 RLGDNxx (C18), RLGDEXX (C20)
 EDLVxx (F6), EDLVPXX (F36), EDLVFXX (F49), EDLVMXX (F55)
 REGIONxx

Table E1. Country codes for countries in ESS 2008 (including possible participants):

Austria	AT	Lithuania	LT
Belgium	BE	Netherlands	NL
Bulgaria	BG	Norway	NO
Croatia	HR	Poland	PL
Cyprus	CY	Portugal	PT
Czech Republic	CZ	Romania	RO
Denmark	DK	Russia	RU
Estonia	EE	Slovakia	SK
Finland	FI	Slovenia	SI
France	FR	Spain	ES
Germany	DE	Sweden	SE
Greece	GR	Switzerland	CH
Hungary	HU	Ukraine	UA
Ireland	IE	United Kingdom	GB
Israel	IL	Turkey	TR
Latvia	LV		

Example: In section F of the Data Protocol and in the SPSS and SAS programmes available at the ESS Archive web site, the variable name of country-specific highest level of education (question F6) is EDLVxx. The country-specific variables on respondent's highest level of education in Slovakia and Portugal should be renamed EDLVSK and EDLVPT, respectively.

The categories of the country-specific variables should be in English, but can be documented in the original languages in the National Technical Summary. The National Technical Summary should include a short description of the electoral system, political parties, the education system and properties of the variable REGIONxx (see section H).

Any change in country specific variables from ESS round 3, extra categories etc., should be documented in the National Technical Summary.

E1.2 Political party

B12: PRTVTxx "PARTY VOTED FOR IN LAST NATIONAL ELECTION"
PRTVxx1 "PARTY VOTED FOR IN LAST NATIONAL ELECTION 1"
PRTVxxN "PARTY VOTED FOR IN LAST NATIONAL ELECTION N"

These items need to be country-specific due to differences in electoral and party systems between countries. There will be two main groups of countries using different principles of organising the data:

i. Only one single vote registered.

ia. Countries where only one national-level election takes places.

Comment: None

ib. Countries where multiple national-level elections take place.

Comment: Please ask about the last election for the **primary legislative assembly**.

⇒ **Principle 1.** Countries belonging to group i. rename PRTVTxx, and use their national list of parties as categories. PRTVxx1 – PRTVxxN are **not** included in these data files.

ii. Two or more votes registered.

iia. Countries where voters have **more than one vote for the same assembly** (e.g. parallel and mixed member proportional systems; double ballot systems)

Comment: Please ensure that both/all votes are supplied.

iib. Countries using **preferential systems** (e.g. Single Transferable Vote or Alternative Vote).

Comment: Please provide first and second preference vote.

⇒ **Principle 2.** Ranking of votes possible: These countries use the variables PRTVxx1 – PRTVxxN to register the N votes. PRTVTxx is derived from PRTVTxx1 – PRTVxxN, and provided with a label documenting that the variable is derived from these variables. The national lists of parties are used as categories.

⇒ **Principle 3.** Ranking of votes **not** possible: Please use the variables PRTVxx1 – PRTVxxN to register the N votes and add their national list of parties as categories. The variable PRTVTxx is **not** included in these data files.

The overview below sums up the principles:

Number of votes registered	Ranking of votes/preference	
	Possible	Not possible
Only one	Principle 1. Only PRTVTxx included	
Two or more	Principle 2. PRTVTxx (derived) and PRTVxx1 – PRTVxxN included	Principle 3. Only PRTVxx1 – PRTVxxN included

B20b: PR TCLxx "WHICH PARTY FEEL CLOSER TO"

B22: PR TMBxx "MEMBER OF WHICH PARTY"

Please use country-specific categories in English.

E1.3 Education

F6: EDLVxx "HIGHEST LEVEL OF EDUCATION, [COUNTRY]"

F36: (EDLVPxx "PARTNER'S HIGHEST LEVEL OF EDUCATION, [COUNTRY]")

F49: (EDLVFxx "FATHER'S HIGHEST LEVEL OF EDUCATION, [COUNTRY]")

F55: (EDLVMxx "MOTHER'S HIGHEST LEVEL OF EDUCATION, [COUNTRY]")

Please provide the country-specific variables on respondent's highest level of education, as well as for partner, father and mother if national instruments have been used. Only one country-specific variable per measurement will be included in the integrated data file. If more than one country-specific variable is needed for each measurement, the variables will be made available from a separate country specific file for [COUNTRY]. Please use country-specific categories in English.

E1.4 Region

REGIONxx "REGION"

This variable is not derived from the questionnaire but should be included in File 1 (see section F1).

The units in REGIONxx should meet the following demands:

1. They should be units where it is possible to attach contextual data (from national records/registers).
2. The net sample of the geographical units must be representative and large enough for statistical analysis. Alternatively, please document how units can be grouped to fulfil this requirement in the National Technical Summary.
3. The population of each unit has to be large enough to ensure anonymity of respondents.
4. Countries included in the NUTS nomenclature should use a level (or a grouping of a level) from NUTS in REGIONxx.

All countries listed in table E1, *except Israel, Ukraine and Russia* are included in the Nomenclature of Territorial Units for Statistics (NUTS), established by Eurostat, see http://ec.europa.eu/eurostat/ramon/nuts/codelist_en.cfm?list=nuts

E1.5 Other country-specific measurements

F32: HINCTNTA "HOUSEHOLD'S TOTAL NET INCOME, ALL SOURCES"

The categories are to be based on deciles of the actual household income range in the given country. The deciles should be derived from the best available source for the country and match the requirement of the question. Possible sources for the calculation of deciles can be national register data, or representative country wide surveys (for example the EU-SILC). Using the median income as the reference point, 10 deciles should be calculated with the median itself at the top of the fifth decile (category F). The figures should not appear to be too exact. Minor rounding can be applied to achieve this if necessary. The deciles should be reported in national currency and the conversion rate to euros should be documented in the National Technical Summary, by the formula

$$1 \text{ [national currency]} = x.xx \text{ €.}$$

The intervals of the categories in CARD 53 are:

CARD 53				
YOUR <u>HOUSEHOLD</u> INCOME				
	Approximate WEEKLY	Approximate MONTHLY	Approximate ANNUAL	
Show card code				Data file code
J	Less than €xx	Less than €xxx	Less than €xxx	01
R	€xx to under €xx	€xxx to under €xxx	€xxx to under €xxx	02
C	€xx to under €xx	€xxx to under €xxx	€xxx to under €xxx	03
M	€xx to under €xx	€xxx to under €xxx	€xxx to under €xxx	04
F	€xx to under €xx	€xxx to under €xxx	€xxx to under €xxx	05
S	€xx to under €xx	€xxx to under €xxx	€xxx to under €xxx	06
K	€xx to under €xx	€xxx to under €xxx	€xxx to under €xxx	07
P	€xx to under €xx	€xxx to under €xxx	€xxx to under €xxx	08
D	€xx to under €xx	€xxx to under €xxx	€xxx to under €xxx	09
H	More than €xx	More than €xxx	More than €xxx	10

A show card must always be used at this question. The ten rows on the show card should display the income ranges selected and be presented by the ten letters above (or their equivalent when other alphabets are used) which helps to ensure respondent confidentiality. Each country can choose whether to include weekly, monthly, or annual amounts on the showcard or whether they want to include more than one of these as appropriate. The text in the last sentence of the question should be rephrased to match the solution selected. If you have any questions or queries regarding this, please direct them to ess@city.ac.uk

F53 and F59: PARENTS' OCCUPATION.

The main questionnaire includes questions about father's and mother's occupation when respondent was 14 years old (F53 and F59). These verbatim recorded answers are not required to be post-coded, but can be registered as string variables (in original language), and be deposited in a separate file to be archived at NSD.

E2. Respondent identification number and country

IDNO "RESPONDENT'S IDENTIFICATION NUMBER"

Identifies the respondent uniquely in the national data files.

CNTRY "COUNTRY"

The categories of the variable are the two-character country codes in ISO 3166-1. In the Polish data file, for example, the variable will have the value "PL" for all respondents. Please see table E1 for the codes of countries (possibly) participating in ESS 2008.

To be included in **all** data files (see section F).

IDNO and CNTRY together uniquely identify the respondent in the integrated data files. By sorting integrated data files by CNTRY IDNO (in that order) and thereafter using CNTRY IDNO (in that order) as "key" or "by" variables in match/merge statements, the match/merge will be correct.

E3. Administrative variables

Start of interview, main questionnaire (sections A-F):

INWDDS "START OF INTERVIEW, DAY OF MONTH"

INWMMS "START OF INTERVIEW, MONTH"

INWYYS "START OF INTERVIEW, YEAR"

INWSHH "START OF INTERVIEW, HOUR"

INWSMM "START OF INTERVIEW, MINUTE"

End of interview, main questionnaire (sections A-F):

INWDDE "END OF INTERVIEW, DAY OF MONTH"

INWMME "END OF INTERVIEW, MONTH"

INWYYE "END OF INTERVIEW, YEAR"

INWEHH "END OF INTERVIEW, HOUR"

INWEMM "END OF INTERVIEW, MINUTE"

To be included in File 1 (see table F.1i).

Administration of Supplementary questionnaire:

SPLTADMC "ADMINISTRATION OF SPLIT BALLOT AND MTMM"

The variable will identify in which design the respondent participated.

To be included in File 1 (see table F.1i).

Date of completion of Supplementary questionnaire (sections G and H):

SUPQDD "DAY OF MONTH, SUPPLEMENTARY QUESTIONNAIRE"

SUPQMM "MONTH, SUPPLEMENTARY QUESTIONNAIRE"

SUPQYR "Year, SUPPLEMENTARY QUESTIONNAIRE"

To be included in File 1 (see table F.1i).

F. Variable definitions and flowchart

Tables F.1a-i, F.2 and F.3 document the official formats and contents of the variables in the ESS 2008 data files. The tables document the question number, the variable label, format and categories of each variable. The last column has information about skips, coding standards etc. Please use the tables, the flowchart in section F.4 and the source questionnaires simultaneously when setting up national questionnaires and data programmes.

Table F.1a. Data file 1: Main questionnaire, section A. Idno and Cntry.

Qno	Name	Label	Format	Values	Categories	Comment
				66	Not applicable	
				77	Refusal	
				88	Don't know	
				99	No answer	
A5	NWSPTOT	NEWSPAPER READING, TOTAL TIME ON AVERAGE WEEKDAY	F2.0	00 01 02 03 04 05 06 07 77 88 99	No time at all Less than 0,5 hour 0,5 hour to 1 hour More than 1 hour, up to 1,5 hours More than 1,5 hours, up to 2 hours More than 2 hours, up to 2,5 hours More than 2,5 hours, up to 3 hours More than 3 hours Refusal Don't know No answer	A5: Ask all Go to A7 Ask A6

CRVCTEF	C10 Worry about becoming victim of violent crime has effect on quality of life
TRRENYR	C11 How likely terrorist attack in Europe during next twelve months
TRRCNYR	C12 How likely terrorist attack in country during next twelve months
TRRPRSN	C13 Terrorist suspect in prison until police satisfied
TRRTORT	C14 Torture in country never justified even to prevent terrorist attack
HEALTH	C15 Subjective general health
HLTHHMP	C16 Hampered in daily activities by illness/disability/infirmity/mental problem
RLGBLG	C17 Belonging to particular religion or denomination
RLGDNM	C18 Religion or denomination belonging to at present
RLGDNXX	C18 Religion or denomination belonging to at present, [country]
RLGBLGE	C19 Ever belonging to particular religion or denomination
RLGDNME	C20 Religion or denomination belonging to in the past
RLGDEXX	C20 Religion or denomination belonging to in the past, [country]
RLGDGR	C21 How religious are you
RLGATND	C22 How often attend religious services apart from special occasions
PRAY	C23 How often pray apart from at religious services
DSCRGRP	C24 Member of a group discriminated against in this country
DSCRRC	C25 Discrimination of respondent's group: colour or race
DSCRNTN	C25 Discrimination of respondent's group: nationality
DSCRRLG	C25 Discrimination of respondent's group: religion
DSCR LNG	C25 Discrimination of respondent's group: language
DSCRETN	C25 Discrimination of respondent's group: ethnic group
DSCRAGE	C25 Discrimination of respondent's group: age
DSCRGND	C25 Discrimination of respondent's group: gender
DSCRSEX	C25 Discrimination of respondent's group: sexuality
DSCRDSB	C25 Discrimination of respondent's group: disability
DSCROTH	C25 Discrimination of respondent's group: other grounds
DSCRDK	C25 Discrimination of respondent's group: don't know
DSCRREF	C25 Discrimination of respondent's group: refusal
DSCRNAP	C25 Discrimination of respondent's group: not applicable
DSCRNA	C25 Discrimination of respondent's group: no answer
CTZCNTR	C26 Citizen of country
CTZSHIPB	C27 Citizenship
BRNCNTR	C28 Born in country
CNTBRTHB	C29 Country of birth
LIVECNTR	C30 How long ago first came to live in country
LNGHOMA	C31 Language most often spoken at home: first mentioned
LNGHOMB	C31 Language most often spoken at home: second mentioned
BLGETMG	C32 Belong to minority ethnic group in country
FACNTR	C33 Father born in country
FBRNCNTA	C34 Country of birth, father
MOCNTR	C35 Mother born in country
MBRNCNTA	C36 Country of birth, mother
DFINCAC	D1 Large differences in income acceptable to reward talents and efforts
SCHTAUT	D2 Schools teach children obey authority
WMCPWRK	D3 Woman should be prepared to cut down on paid work for sake of family
SMDFSLV	D4 For fair society, differences in standard of living should be small
HRSHSNT	D5 People who break the law much harsher sentences
MNRGTJB	D6 Men should have more right to job than women when jobs are scarce
UEMPLWK	D7 Of every 100 working age how many unemployed and looking for work
SICKDSB	D8 Of every 100 working age how many long-term sick, disabled
NMNYBSC	D9 Of every 100 working age how many not money for basic necessities
BRNOCNT	D10 Of every 100 working age how many born outside country
SLVPENS	D11 Standard of living of pensioners
SLVUEMP	D12 Standard of living of unemployed

CLDCRSV	D13 Provision of affordable child care services for working parents
YNGFNJB	D14 Opportunities for young people to find first full-time job
GVJBEVN	D15 Job for everyone, governments' responsibility
GVHLTHC	D16 Health care for the sick, governments' responsibility
GVSLVOL	D17 Standard of living for the old, governments' responsibility

INTNUM3	Interviewer-number of the third interviewer
TOTCINT3	Number of visits the third interviewer (intnum3) did
DATEV1	Date of the first visit
DATE2	Date of the second visit
DATE3	Date of the third visit
DATE4	Date of the fourth visit
DATE5	Date of the fifth visit
DATE6	Date of the sixth visit
DATE7	Date of the seventh visit
DATE8	Date of the eighth visit

DATE9	Date of the ninth visit
DATE10	Date of the tenth visit
MONV1	Month of the first visit
MONV2	Month of the second visit
MONV3	Month of the third visit
MONV4	Month of the fourth visit
MONV5	Month of the fifth visit
MONV6	Month of the sixth visit
MONV7	Month of the seventh visit
MONV8	Month of the eighth visit
MONV9	Month of the ninth visit
MONV10	Month of the tenth visit
DAYV1	Weekday of the first visit
DAYV2	Weekday of the second visit
DAYV3	Weekday of the third visit
DAYV4	Weekday of the fourth visit
DAYV5	Weekday of the fifth visit
DAYV6	Weekday of the sixth visit
DAYV7	Weekday of the seventh visit
DAYV8	Weekday of the eighth visit
DAYV9	Weekday of the ninth visit
DAYV10	Weekday of the tenth visit
HOURV1	Hour of the first visit
HOURV2	Hour of the second visit
HOURV3	Hour of the third visit
HOURV4	Hour of the fourth visit
HOURV5	Hour of the fifth visit
HOURV6	Hour of the sixth visit
HOURV7	Hour of the seventh visit
HOURV8	Hour of the eighth visit
HOURV9	Hour of the ninth visit
HOURV10	Hour of the tenth visit
MINV1	Minute of the first visit
MINV2	Minute of the second visit
MINV3	Minute of the third visit
MINV4	Minute of the fourth visit
MINV5	Minute of the fifth visit
MINV6	Minute of the sixth visit
MINV7	Minute of the seventh visit
MINV8	Minute of the eighth visit
MINV9	Minute of the ninth visit
MINV10	Minute of the tenth visit
MODEVB1	Mode of first visit
MODEVB2	Mode of the second visit
MODEVB3	Mode of the third visit
MODEVB4	Mode of the fourth visit
MODEVB5	Mode of the fifth visit
MODEVB6	Mode of the sixth visit
MODEVB7	Mode of the seventh visit
MODEVB8	Mode of the eighth visit
MODEVB9	Mode of the ninth visit
MODEVB10	Mode of the tenth visit
NUMTEL	Number of automatic calls before first face-to-face contact or contact attempts
RESULB1	Result of first visit
RESULB2	Result of second visit
RESULB3	Result of third visit
RESULB4	Result of fourth visit
RESULB5	Result of fifth visit
RESULB6	Result of sixth visit
RESULB7	Result of seventh visit
RESULB8	Result of eighth visit
RESULB9	Result of ninth visit
RESULB10	Result of tenth visit

NUMHH	Number of households at the address
HHSELECT	Number of households selected at the address
NHHMEM	Number of members 15 years or more in household
OUTNIB1	Outcome when there was no interview (visit 1)
OUTNIB2	Outcome when there was no interview (visit 2)
OUTNIB3	Outcome when there was no interview (visit 3)
OUTNIB4	Outcome when there was no interview (visit 4)
OUTNIB5	Outcome when there was no interview (visit 5)
OUTNIB6	Outcome when there was no interview (visit 6)
OUTNIB7	Outcome when there was no interview (visit 7)
OUTNIB8	Outcome when there was no interview (visit 8)
OUTNIB9	Outcome when there was no interview (visit 9)
OUTNIB10	Outcome when there was no interview (visit 10)
REFVIS1	Number of visit at which a refusal occurred (1)
REFVIS2	Number of visit at which a refusal occurred (2)
REFVIS3	Number of visit at which a refusal occurred (3)
RERSB1_1	Reason for refusal (1_1)
RERSB1_2	Reason for refusal (1_2)
RERSB1_3	Reason for refusal (1_3)
RERSB1_4	Reason for refusal (1_4)
RERSB1_5	Reason for refusal (1_5)
RERSB2_1	Reason for refusal (2_1)
RERSB2_2	Reason for refusal (2_2)
RERSB2_3	Reason for refusal (2_3)
RERSB2_4	Reason for refusal (2_4)
RERSB2_5	Reason for refusal (2_5)
RERSB3_1	Reason for refusal (3_1)
RERSB3_2	Reason for refusal (3_2)
RERSB3_3	Reason for refusal (3_3)
RERSB3_4	Reason for refusal (3_4)
RERSB3_5	Reason for refusal (3_5)
COOP1	Estimation of the cooperation rate at refvis1
COOP2	Estimation of the cooperation rate at refvis2
COOP3	Estimation of the cooperation rate at refvis3
AGEA_1	Estimation of age of respondent or household member who refuses, by interviewer
AGEA_2	Estimation of age of respondent or household member who refuses, by interviewer
AGEA_3	Estimation of age of respondent or household member who refuses, by interviewer
GENDERA1	Gender of respondent or household member who refuses, recorded by interviewer
GENDERA2	Gender of respondent or household member who refuses, recorded by interviewer
GENDERA3	Gender of respondent or household member who refuses, recorded by interviewer
OUTINVAL	Outcome address invalid
TYPE	Type of house respondent lives in
PHYS	Physical state of the buildings and dwellings in the area
LITTER	How common is litter or rubbish lying around the immediate area
VANDA	How common is vandalism, graffiti or deliberate damage to property
RECONV	Number of visit when refusal conversion activities started

G. Programmes for applying Data Protocol variable names, labels and categories

To assist the data producers, and ensure data to be as consistent and harmonised as possible, NSD offers SPSS and SAS programmes with the official ESS variable names, labels, categories and formats. The variable labels in the programmes include the question numbers to facilitate cross-references between the questionnaires and the variables. The programmes will be available for download by the end of July 2008 be downloaded from the "Data protocol and variable definitions" page on the ESS Archive web site at <http://essdata.nsd.uib.no>. Please apply the Data Protocol variable names, labels and categories to the data files before you submit them to the archive. The package of programmes includes the following syntax/dictionary files:

SPSS

ESS4ms1_2.sps	Main and supplementary questionnaires, syntax
ESS4ms1_2.sav	Main and supplementary questionnaires, dictionary, SPSS Windows 12-14
ESS4ms1_2.por	Main and supplementary questionnaires, dictionary, SPSS portable file
ESS4i.sps	Interviewer's questionnaire, syntax
ESS4i.sav	Interviewer's questionnaire, dictionary, SPSS Windows 12-14
ESS4i.por	Interviewer's questionnaire, dictionary, SPSS portable file
ESS4cf.sps	Contact forms, syntax
ESS4cf.sav	Contact forms, dictionary, SPSS Windows 12-14
ESS4cf.por	Contact forms, dictionary, SPSS portable file
ESS4standards.sps	Value labels for international standards in ESS (see section D1).
ESS4RenameQtoM.sps	Renaming variables in the Core, rotating modules and Interviewer's questionnaire from question numbers to ESS mnemonic names, syntax.

SAS

ESS4ms1_2.sas	Main and supplementary questionnaires, syntax
ESS4ms1_2.sas7bdat	Main and supplementary questionnaires, dictionary, SAS Windows 8-9
ESS4ms1_2.exp	Main and supplementary questionnaires, dictionary, SAS portable file (proc cport)
ESS4i.sas	Interviewer's questionnaire, syntax
ESS4i.sas7bdat	Interviewer's questionnaire, dictionary, SAS Windows 8-9
ESS4i.exp	Interviewer's questionnaire, dictionary, SAS portable file (proc cport)
ESS4cf.sas	Contact forms, syntax
ESS4cf.sas7bdat	Contact forms, SAS Windows 8-9
ESS4cf.exp	Contact forms, SAS portable file (proc cport)
ESS4formats1_2.sas	Definition of formats, all data files
ESS4standards.sas	Formats for international standards in ESS (see section D1).
ESS4RenameQtoM.sas	Renaming variables in the Core, rotating modules and Interviewer's questionnaire from question numbers to ESS mnemonic names, syntax.

Comment to ESS4standards.*: If the survey organisation does not have procedures for automatic checking of wild codes in the variables

CTZSHIPB "CITIZENSHIP"

CNTBRTHB "COUNTRY OF BIRTH"

LNGHOMA "LANGUAGE MOST OFTEN SPOKEN AT HOME: FIRST MENTIONED"

LNGHOMB "LANGUAGE MOST OFTEN SPOKEN AT HOME: SECOND MENTIONED"

FBRNCNTA "COUNTRY OF BIRTH, FATHER"

MBRNCNTA "COUNTRY OF BIRTH, MOTHER"

ISCOCO "OCCUPATION, ISCO88 (COM)"

NACER11 "INDUSTRY, NACE REV.1.1"

ISCOCOP "OCCUPATION PARTNER , ISCO88 (COM)"

the value labels/formats in ESS4standards.* can be added to File 1 to facilitate proof-reading (spotting empty labels in frequency tables).

H. National technical summary

The meta data documentation is an important part of the high quality ESS data and represents one of the major strengths of the European Social Survey. The National Teams have a central role in the production of such documentation by providing the National Technical Summary (NTS).

For those who have access to the fully licensed Adobe Acrobat program, NSD will make an electronic National Technical Summary Form in PDF format, for the teams to download, fill in and deposit to the ESS Archive at NSD along with the other electronic deliverables. The form will be available for download from the "Survey documentation" page at the ESS Archive web site <http://essdata.nsd.uib.no/> in October 2008. NC's will be notified by e-mail when the form is available.

NSD encourages the use of the PDF electronic form. For users who do not have access to a fully licensed Adobe Acrobat, a version is also available in Word format.

Please save the National Technical Summary file as Ntech2008xx, where xx is the country code as specified in table E1.
