HONG KONG 2005

Geographical scope:
Hong Kong

Principal investigator(s):
Dr Ng Chun Hung, Department of Sociology University of Hong kong E-mail: garfat@pacific.net.hk

Data Collection Organization:
Policy 21, The University of Hong Kong

Fieldwork Period:
01-03-2005 - 31-05-2005.

Universe:
National Population, Both sexes,18 and more years

Sample size:
1252

Questionnaire:
To test the questionnaire and the fieldwork arrangement, a pilot survey was conducted in around end December 2004 on an effective sample of 16 respondents aged 18 and over. We pre-tested with a more complete version of the 2000 questionnaire. Respondents found the questionnaire rather lengthy and showed depleting motivation to complete the survey. We deleted some questions that were deemed too taxing (e.g. V145A to 145F) and some seen as not quite relevant to the local context (e.g. V177 to V181, V197 to V203). The resultant questionnaire is much based on the earlier versions used in the Mainland China and Taiwan survey, with some additions and variations to suit the Hong Kong context. A multi-wave, multi-contact approach2, which aimed at increasing the proportion of respondents who were willing to co-operate in the survey and the chance of contacting the households, was adopted in data collection. This approach is briefly summarized below: Before data collection a) Before the interview took place, a notification letter was sent to the living quarters sampled, about a week before the start of data collection, explaining the purposes of the survey and re-assuring the respondents that data collected in the survey will be kept strictly confidential; b) An enquiry hotline telephone number and a contact person was also included to enable the respondents to clarify any questions they may have on the survey, or to make appointment on the preferred survey time; During data collection c) To facilitate verification of identity of the interviewers, the interviewers brought along with them their interviewer identity card issued by Policy 21 Ltd. of the University of Hong Kong. If in doubt, the respondents could call Policy 21 hotline to re-confirm the identity of interviewers. If the respondents were not free for an interview, the interviewers would make an appointment to come back at a time convenient to the householders; d) If the respondents

sampled were not present in the household, which was not uncommon, the interviewers would call back at another time. The interviewers were required to make at least 5 call backs, if the first visit was not successful, at different times of the day and different days of the week, to minimize non-contact. Very often, an interviewer had to call 3 4 times in order to complete on successful interview; e) In case a refusal was encountered, the fieldwork managers would take over the case. The manager usually would re-assign the case to another interviewer. Occasionally, he/she would accompany the interviewer to make a second attempt. Depending on individual circumstances, sometimes the field managers would take over the case. This arrangement had helped for quality control purposes and in minimizing non-response;

Sample:
1. The sample for the survey was selected from the Frame of Quarters maintained by the Census & Statistics Department. This frame is the most complete and up-to-date register of residential addresses in Hong Kong. It is updated by administrative returns on buildings constructed or demolished, and regularly surveys conducted by the Census & Statistics Department. For practical purposes, addresses in very remote areas will not be sampled. 2. A two-stage stratified sample design was adopted in the survey, with the records in the frame of quarters first stratified by geographical area and type of quarters. Sampling units were selected using systematic replicated sampling technique with fixed sampling intervals and non-repetitive random numbers. The use of replicated sampling is to facilitate the calculation of sampling errors and any subsequent adjustments to the sample size, if required. 3. In the first stage, a random sample of 2,000 living quarters was selected from the Frame of Quarters. For the second stage, a person aged 18 and above was randomly selected from each household in the addresses sampled. To ensure unbiased and random selection, the usual sampling method called birthday method was used. Research conducted in the US shows that the birthday method is better than the Kish grid method in soliciting the cooperation of the respondents, as the method is less intrusive than the Kish grid method.

Remarks about sampling:
Birthday method was used to identify a respondent. STRATIFICATION FACTORS USED: By geographical area and type of quarters in Hong Kong.

Survey procedure:
Personal Face to Face Interview

Fieldwork:
To ensure that data collected from the survey are credible, the following quality control measures were implemented during data collection: Induction training a) Interviewers with experienced in conducting face-to-face household surveys will be deployed. They are chosen from the pool of over 100 interviewers currently maintained by Policy 21. Training on interviewing techniques and code of ethics for statistical work has already been provided to these interviewers. In addition, training related to the survey in question was also arranged. The interviewers have at least Secondary 5 education qualifications, and many of them in fact possess tertiary education qualifications and have prior

interviewing experience; b) To assist the interviewers, two fieldwork managers who have extensive experience in household surveys were deployed to supervise the work of the interviewers. Throughout the fieldwork period, the fieldwork managers would provide on-site support to the interviewers. On-site quality check c) The fieldwork managers had arranged quality check of 15% of the completed cases, selected on a random basis, by an independent team of checkers, by re-visiting the target respondents to counter-check if the interview has in fact taken place; d) The fieldwork managers had also arranged to counter-check all nonresponse cases and non-contact cases, to ensure that the fieldwork procedures have been followed; e) After the completion of the interview, the fieldwork managers had also sample checked some of the questionnaires to see if they were properly completed; Off-site quality check f) Immediately after the interviews were completed and checked by the fieldwork manager, the questionnaires were passed to a team of indoor staff for editing and coding. Any errors found were referred to the fieldwork manager for follow-up action. The interviewers responsible were also briefed on the errors found to ensure that similar mistakes would not be made in the future.

Response rate:
2000 A Total issued 233 B Not eligible (ill, dead, non-English speaking, not at this address) 1767 C Total eligible 1252 D Total questionnaires received 233 E - non-responses (including non-contact; see note above under sample type) 282 F Refusals (including questionnaires less than half filled in) 0 G Non-contact (included in E) 0 H Other non-response (included in E)

Remarks about non-response:
Data collection was carried out during the period from March to May 2005. A total of 1,252 respondents aged 18 and above were successfully interviewed faceto-face, and the response rate in the survey was 71%. The non-contact rate is 13%. The refusal rate is 16%.

Weighting:
Weighted by the number of respondents aged 18 or above in the household.

Comments

The question was applied in a different way, so it has been built from two single answer variables (so the number of qualities is limited to 2):

Of the qualities that children can be encouraged to learn at home, which do you think is most important? Which is the second most important?

1.independence
2.hard work
3.feeling of responsibility
4.imagination
5.tolerance and respect for other people
6.thrift
7.determination
8.unselfishness
9.obedience

Comments

The questionnaire asks 9 categories but the file shows 10 intervals, plus the DK. So it has no logic:

1. less than 5000 dollars

2. 5001-10000 dollars

3. 10001-15000 dollars

4. 15001-20000 dollars

5. 20001-25000 dollars

6. 25001-30000 dollars

7. 30001-50000 dollars

8. 50001-100000 dollars

9. more than 100000 dollars
