FRANCE 2006

Geographical scope:
France

Principal investigator(s):
Christian Welzel School of Humanities and Social Sciences International University of Bremen
P.O.Box 750 561 D-28725 Bremen Germany e-mail: c.welzel@iu-bremen.de

Data Collection Organization:
GfK CUSTOM RESEARCH France, Rueil-Malmaison Cedex

Fieldwork Period:
30-01-2006 - 24-02-2006.

Universe:
National Population, Both sexes,18 and more years

Sample size:
1001

Estimated Error:
3,2

Questionnaire:
Quota relevant questions and questions necessary for statistical reasons had been asked at the beginning of the interview. Here the actual order: Statistical questions: Interview number, date of contact, type of contact, comments, number of quota sheet Quota relevant questions: Region ZEAT, commune, size of town, v235, v236, v237, v241, v241_1 (if people are currently not working, they had been asked, if they had a job in the past), v242, Then the order of the WVS questions strictly followed the master questionnaire. No additional questions had been inserted in the programmed questionnaire. The wording of v34 to v42 and v198 to v208 had been amended, because the original version was likely to offend minorities due to the special situation in France (protests in suburban areas etc.). After question v256 some additional statistical questions, such as duration of the interview, name and address of respondent were inserted.

Sample:
Sampling procedure: Quota sample according to the following criteria: gender, age, profession of respondent, region, size of town. As in most of the countries involved, quota sampling had been used to select the respondents, a brief description of the methodology at the beginning of the methodological report seems to be useful. The respondent was selected using quota selection. Respondents were only selected if they matched the quotas given to the interviewers. Concerning

substitution, any respondent fitting an appropriate quota profile could be interviewed instead of somebody with the same quotas, but who did not want to participate in the survey. Concerning stratification factors, region and size of town were used to design the sample and select appropriate sampling points.

Survey procedure:
Personal Face to Face Interview

Fieldwork:
Face-to-face in-home interviews via CAPI (computer assisted personal interviews)

Weighting:
During and after data collection, representativeness of the sample with respect to nationally based criteria has been checked. Deviations from the populations distribution on these criteria were observed. These deviations have been corrected by a weighting variable built with the RIM weighting procedure see the RIM weighting theoretical basis paper entitled ON A LEAST SQUARES ADJUSTMENT OF A SAMPLED FREQUENCY TABLE WHEN THE EXPECTED MARGINAL TOTALS ARE KNOWN, by W. Edwards Deming and Frederick F. Stephan, in volume 11, 1940of the Annals of Mathematical Statistics. It was realised with Quantum software of SPSS MR company.
