Fieldwork Period:

10-07-2007 - 24-07-2007.

Universe:

National Population, Both sexes, 18 and more years

Sample size:

1200

Questionnaire:

WVS question number or description of question: V100 TO V103 WERE EXCLUDED V108 TO V110 WERE EXCLUDED V166 TO V169 ONE OF THE ANSWER CATEGORIES WAS OMITTED:

INADEQUATE EDUCATION Reason(s) not included: To reduce length of questionnaires it was an unfortunate error in editing the questionnaire

Sample:

Sample stratification: The selection criteria was that of proportional distribution of interviews among the 17 Autonomous Regions according to their population and to community size within each region. Those municipalities with more than 500,000 inhabitants are of compulsory selection; the rest come out from a random draw. The same number of interviews per Autonomous Region is kept in each study. The only Autonomous Regions that always have interviews at all levels of community size are: Andalucía, Cataluña and País Valenciano. The strata of the other regions are drawn each month. The number of interviews that proportionally corresponds to each province and type of community is also taken into consideration within each Autonomous Region. Moreover, we keep track of the population settlements that are selected so that they are not repeated, and in large cities we distribute the interviews among the districts. Household selection: once the number of interviews to

be done has been established (by size of community and Autonomous Region), we use a computerised system to randomly extract municipalities and electoral sections within them. The number of electoral sections randomly selected is related to the total number of interviews to carry out in the municipality. A random route system is applied for household selection; in all the buildings that the interviewer passes by (on either side of the street, depending on the side where the starting point is), one every three housings is selected; in case of refusal or non-contact, the interviewer goes to the next household. Respondents selection: age and sex quotas are used for the respondents selection. These quotas are established in each sampling point according to the cross between size of community and age and sex at national level and also at regional level in the three regions above mentioned (Cataluña, Andalucía, País Valenciano). In the other regions the distribution is proportional.

Remarks about sampling:

At the very end of the selection process, when interviewer is accepted into a household. Some sampling experts would not considered this as quota, but as another process of stratification of the sample. Please write in: Distribution according to population in each region, and within the region, according to size of place, and at the household level, according to sex/age distribution of population in each region. After three attempts to get the interview in a household, and substitution is always made within the same building. (Most housing is in apartments buildings). Given the the sampling design that was used, multiple-stage stratified sampling, with random routes, the aim was to obtain 1,200 interviews, but interviewers were given a number of interviews higher, 1,300, counting on refusals and non productive contacts and counting also on substitution after three attempts. That is why the sum of non-completed interviews and completed interviews do no add up to the starting size of 1,300.

Survey procedure:

Personal Face to Face Interview

Fieldwork:

Face to face

Response rate:

1300 Total number of starting names/addresses 27 - selected respondent too sick/incapacitated to participate 11 - selected respondent away during survey period 13 - selected respondent had inadequate understanding of language of survey 139 - no contact at selected address 24 - refusal at selected address 57 - personal refusal by selected respondent 1213 - full productive interview

Weighting:

By sex and age (4 categories), Weight includes as variable in data file

V89.- Now I will briefly describe some people. Using this card, would you please indicate for each description whether that person is very much like you, like you, somewhat like you, not like you, or not at all like you? (Code one answer for each description): Tradition is important to this person; to follow the customs handed down by one's religion or family.

Spain 2007(N=1200)

Ahora voy a describirle brevemente diversos tipos de personas. Utilizando esta tarjeta, podría indicarnos para cada descripción si esa persona se le parece mucho, es como Vd., se le parece algo, se le parece un poco, no se le parece, o no se le parece a Vd. en absoluto.

La tradición, seguir las costumbres que le vienen de su religión o familia

V122.- Some people believe that individuals can decide their own destiny, while others think that it is impossible to escape a predetermined fate. Please tell me which comes closest to your view on this scale on which 1 means “everything in life is determined by fate,” and 10 means that “people shape their fate themselves.” (Code one number):

Spain 2007(N=1200)

Algunas personas creen que los individuos pueden decidir su propio destino, mientras que otras creen que es imposible escapar a un destino predeterminado. Por favor, dígame qué número está más próximo a su opinión, utilizando esta escala en la que el 1 significa que “todo en la vida está predeterminado por el destino”, y el 10 significa que “las personas se hacen su propio destino”.

V174.- I'm going to read out another list of global problems, and goals that world leaders have set to reduce them. Indicate for each of these goals how high a priority your own country's leaders should give to it, using this card. (Read out and code one answer for each goal): About 840 million people around the world live in slums. The goal is to make a significant improvement in the housing of at least 100 million people.
