Data Collection Organization:

Department of Political Science Australian National University

Fieldwork Period:

01-08-2012 - 31-10-2012.

Universe:

National Population, Both sexes, 18 and more years

Sample size:

1477

Estimated Error:

2,6

Sample:

A total of 5,000 sample members were random selected from the adult Australian population who are on the electoral roll. This selection was provided by the Australian Election Commission (AEC) for a one time use only for the purpose of conducting this survey. The sample of 5,000 records was further divided into two batches with batch 01 consisting of 4,211 records and batch 02 consisting of 789 records. This batching was undertaken with the view that batch 01 would be sufficient to achieve the target sample size of $n = 1,600$ and batch 02 to be used only as a top-up, if required.

Survey procedure:

Postal interview

Fieldwork:

Selected sample members were sent a survey booklet as part of the initial approach inviting to take part. This was a 28 page booklet comprising of the cover page with details of the survey including a web address to the online version of the survey and a unique username and password if the sample member chose to complete the survey online. The second page of the booklet covered the frequently asked question and a 'how to fill out this questionnaire' section to assist respondents. See Appendix

A1 for a copy of the survey booklet. The survey booklet was posted in a window faced C4 envelope along with a reply paid C4 envelope for the respondent to mail the completed survey booklet back. Key dates and milestones for the survey invitation is summarised in Table 3. Procedures to maximise response for the World Values Survey included: Having an online survey option available for sample members; Operation of a World Values Survey helpdesk with a 1800 number and an email address to help establish survey bona fides, address sample members' queries, and encourage response; Reminder activities including reminder card, reminder survey booklet and a reminder letter; Incorporating a 'top-up' batch to boost total returns; Extending the cut off date to accommodate later arrivals and responses received from remote locations; and Having an incentive scheme with a chance to win one of four \$500 prize draw (total prize pool of \$2,000).

Response rate:

A total of 1,477 surveys were received as of 16 October 2012 with 1,286 hardcopy surveys and 191 online completes. Completed surveys 1,477 29.5% Non response 3,184 63.7%

Remarks about non-response:

The fieldwork period was extended to accommodate late arrivals. All Total records available 5,000 100.0 Completed surveys 1,477 29.5% Hardcopy 1,286 Online 191 Refusals / Opt outs 133 2.7% Return to Sender (RTS) 206 4.1% Non response 3,184 63.7%

Weighting:

A "rim weighting" approach was used to adjust the data for differential survey response rates across age (18-34 years, 35-44 years, 45-54 years, 55+ years) by educational attainment (university degree, not university), gender and state/territory. The weights were created using a statistical regression approach which seeks to achieve the "best fit" possible with the population proportions specified by the weighting variables while disturbing the overall data as little as possible. The "rim weighting" algorithm provided in the Quantum analysis software was used to develop sample weights. Source data for weighting was the 2011 Census of Population and Housing in the case of gender and state and the 2006 Census of Population and Housing for educational (and age) as educational attainment data had not been released for the 2011 Census by the completion of the survey. Respondents who did not provide their age were assigned to survey average age (45 to 54 years) for weighting purposes.

Y003.- Autonomy Index is a computed variable based on the Children qualities battery. It uses only four variables: V19= Important Child Qualities: Religious Faith V21= Important Child Qualities: Obedience V12= Important Child Qualities: Independence V18= Important Child Qualities: Determination, Perseverance Only variables with answers to all v19,v21,v12,18 have an index. The SPSS like formula is: Compute Y003=-5. if v19>=0 and v21>=0 and v12>=0 and v18>=0 then Y003=(v19 + v21)-(v12 +v18).
