

Weights

The post-hoc weighting of variables was adjusted on the basis of three criteria: The population of the two linguistic/national communities in Cyprus, gender ratios within each community; and urban population concentration. The table below displays the most recent population estimates for the two communities and the outputs from the samples of completed surveys. The only substantial deviations of the sampling frames from the population estimates were the population ratio between the communities (the much smaller Turkish-speaking community was oversampled), and the reversed gender ratios of respondents to population.

| | Census | | | | |
|--|-------------------|-------|------|-------|-------|
| | Total | women | men | rural | urban |
| TRNC | 294906 | 0.46 | 0.54 | 0.26 | 0.74 |
| RoC | 803147 | 0.50 | 0.50 | 0.3 | 0.7 |
| | Survey | | | | |
| | total | women | men | rural | urban |
| TRNC | 500 | 0.56 | 0.44 | 0.25 | 0.76 |
| RoC | 500 | 0.49 | 0.51 | 0.28 | 0.72 |
| | Weighting Factors | | | | |
| | total | women | men | rural | urban |
| TRNC | 0.54 | 0.82 | 1.22 | | |
| RoC | 1.46 | 1.03 | 0.97 | | |
| Notes: Data for Republic of Cyprus population estimates drawn from the Eurostat population estimates for 2010. Data for Turkish Republic of Northern Cyprus data drawn from early results of the 2011 census completed in December 2011. Urbanization estimates from United Nations Population Division, and calculated from the 2006 TRNC census. | | | | | |

The weighting factor for Republic of Cyprus are applied in to the weight calculated by the team for the Republic of Cyprus.
