*Sampling procedure: The sample is two-stage stratified random sample from Central Register of Population, where every population unit has equal probability of selection. First stage PSU selection is made by probability proportional to size of CEA (Clusters of Enumeration Areas) (150 PSUs). CEA are stratified according to 12 regions\*6 type of settlement. At second stage systematic random selection inside CEA brings fixed numbers of persons (150x24) with name and address. Split-halves samples were used for parallel SJM surveys (2x1800).*
