*PLEASE WRITE IN:*

11 economic regions of Azerbaijan were identified as initial strata. 100 PSUs were randomly selected with probability proportional to size of each strata, and then 12 persons were systematically selected in each PSU. The full list of election districts within each stratum were used for random selection of PSUs, and the full lists of voters within selected election districts were used for random selection of respondents. Both election districts (PSUs) and voters (respondents) were selected from the lists published on the official website of Central Election Commission of Azerbaijan (<http://www.infocenter.gov.az>).

Thus, two-stage area probability sampling was applied:

- (1) At the first stage - random selection of 100 PSUs proportionally to size of each strata;
- (2) At the second stage - random selection of 12 respondents within each PSU.
