Klingem@medea.wz-berlin.de

Data Collection Organization:

Russian Public Opinion and Market Research [ROMIR] (Moscow)

Fieldwork Period:

17-11-1995 - 25-01-1996.

Universe:

National Population, Both sexes, 18 and more years

Sample size:

2040

Estimated Error:

2,2

Questionnaire:

The WVS questionnaire was in Russian. There have been included some special variable labels such as: V56 Neighbours: Jews and V149 Institution: The European Union. Special categories labels are: V203/ V204: Geographical affinity, 1. Locality or town where you live, 2. Region of country where you live, 3. Own country as a whole, 4. Europe, 5. The world as whole. Country Specific variables included are: V208: Ethnic identification, 2. Ukrainian, 3. Tatarian 4. Komi 5 Mordovia, 6 Karbadian 7 Balkarian; V209: Language at home: 2. Ukrainian, 3. Tatarian 4. Komi 5 Mordovia, 6 Karbadian 7 Balkarian; The variables political parties V210 a V212; Region: V 234 and V206 Born in this country are also included as country specific variables. The ethnic group of the respondent was not asked in the interview. In the cases of Eastern Europe Countries where the ethnic group is missing the language chosen for interview is the only indicator available to control the ethnic composition of the samples. Nevertheless, native language indicated in the census of 1989 and language chosen for interview are not exactly the same, since the first is rather differentiated whereas for the last the alternatives to choose between where only the national language or Russian.

## Sample:

The sample was designed to be representative of the entire adult population, i.e. 18 years and older, of your country. The lower age cut-off for the sample was 18 and there was not an upper age cut-off for the sample. Population: Total non-institutionalized population of the Russian Federation, 18 years and older, without citizens living in the Far North and in inaccessible regions of Siberia. Five-stage area probability sample: (1) The country is divided into 4 strata. For each stratum the desired number of respondents is defined proportional to population size. (2) Within each stratum 50 primary sampling units (administrative districts) are selected at random proportional to size. (3) Within each primary sampling unit secondary sampling units (towns and rural Soviets as administrative sub-districts) are selected randomly (4) Within each secondary sampling unit third sampling units (voting districts in the towns, villages belonging to a rural Soviet in the rural areas) are randomly selected. The total number of third sampling units was 186. (5) Within each third sampling unit households were selected at random from a household register (fourth sampling unit). (6) Within each household the respondent is randomly selected using the "Kish-selection-grid": all adult family members are listed in a certain order, first males from the oldest to the youngest, then females from the oldest to the youngest; the respondent is selected by a selection key which is randomly composed for each possible type of household composition (fifth sampling unit). Selection is done: 41% Male and 59% Female. 75% Urban and 25 Rural %. Universe: The universe includes the adult population of Russia residing in 89 regions and republics. The Far North and inaccessible regions of Siberia, military bases and prisons are not included. Primary sampling units: Administrative rayons in regions, krais and republics are used as the primary sampling units (PSUs). Each rayon is a geographically localized territory which in general contains both urban and rural settlements. Either a town or a rural settlement may be a center of rayon. Usually, but not always, it is the largest settlement in a rayon. If a rural settlement is the center of a rayon itself generally consists only of rural settlements and is referred to the category of rural rayons. Separate towns which are considered by official statistical institutions as rayons are also included in the set of primary sampling units. These towns are not part of rayons though they are situated in the rayon's territory. Sometimes they may also include some suburbs. So separate towns and rural rayons may be considered as two poles of a scale which contains all various rayons of Russia (primary sampling units, PSUs). On the continuum between these poles there are rayons of mixed type containing urban and rural settlements of different sizes. Population size of different rayons may vary from 4-5 thousand to several hundred thousand or even several million of people in cities considered as separate rayons. If population size is less than 10,000 the rayon is linked to an adjacent one in a stratum. All PSUs are presented in the form of data base of more than 2,000 records with each record corresponding to one rayon or separate town (later referred to as rayons). The record for each rayon (PSU) contains the following data: - unique identification number and rayon title, - code and title of a region, - central town population size, - rayon population size. All data are based on annual statistical reports (Chislennost RSFSR na 1 yanvarya 1990) and 1989 census information. Primary sampling units stratification: PSUs stratification is based on two variables: geographical placement and status of the rayon center. All primary sampling units are grouped in strata consisting of homogeneous rayons. Strata are formed so that each stratum has approximately the same population size. They may consist of from one to several

dozen PSUs depending on PSUs population size. In this sample the stratum population size is equal approximately 3.000 thousand (tab.1). Two cities in Russia Moscow and St. Petersburg have population size exceeding stratum population size. They form so called self-representing strata. The geographic placement of a rayon is defined by corresponding economic and geographic zone. According to statistical institutions Russia is divided into 11 economic and geographic regions. But for sample construction this division seems to be too fractional and can prevent forming strata of equal size in each zone. The main goal for using the geographic factor as a stratification variable is the uniform spreading of PSUs through Russia territory. For these reasons economic and geographic regions in Russia were grouped in four zones: - Zone 1 - North and Center of European part of Russia (unites Northern, North-Western+Kaliningrad obl., Central and Volgo-Vjatsky regions of Russia). - Zone 2 - South of European part of Russia (unites Tsentralno-Chernozjemny, Povolzhsky and North-Caucasian regions of Russia). - Zone 3 - Ural and West Siberia (two economic regions) - Zone 4 - East Siberia and Far East (two economic regions). For economic and geographic division in Russia seven factors are used: nature and resources, population, industry, power engineering, area industry distribution, agriculture, transport and communications ( Ekonomicheskaya geographiya SSSR. Moskva, Vishaya shkola, 1983). 11 regions were aggregated in four zones on the basis of two first factors: nature and resources and population. The second variable of PSUs stratification is the status of the rayon center. It is formed on officially accepted statistical classification by type and population size: - rural settlement, - urban settlement with population size: - below 20.000 - between 20.000 and 50.000 - between 50.000 and 200.000 - between 500.000 and 1000.000 - more than 1000.000

Remarks about sampling:

-Final numbers of clusters or sampling points: 186 -Sample unit from office sampling: Household

Survey procedure:

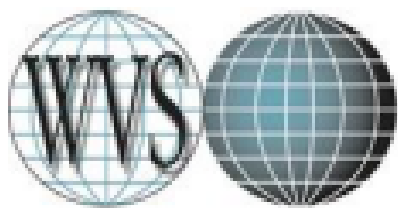

Personal Face to Face Interview

Fieldwork:

Interviews were conducted by 156 interviewers which were especially trained for the study. 10 percent of the interviews were checked by follow-up visits to randomly selected respondents to ensure quality of fieldwork. The length of interviews was between 40 and 325 minutes.

Response rate:

$(2040/2723) \times 100 = 74.9 \%$

**V122.-** Now I'd like you to look at this card. I'm going to read out some different forms of political action that people can take, and I'd like you to tell me, for each one, whether you have actually done any of these things, whether you might do it or would never, under any circumstances, do it. Occupying buildings or factories

**V132.-** Now I'd like you to tell me your views on various issues. How would you place your views on this scale? 1 means you agree completely with the statement on the left; 10 means you agree completely with the statement on the right; and if your views fall somewhere in between, you can chose any number in between. Statement 1 :Ideas that have stood the test of time are generally best Statement 2: New ideas are generally better than old ones

**Y001.-** Materialism/Postmaterialism (12-item index) The MatPMat12 values index used here is created as follows from V104 to V109: V104. People sometimes talk about what the aims of this country should be for the next ten years. On this card are listed some of the goals which different people would give top priority. Would you please say which one of these you, yourself, consider the most important? CODE ONE ANSWER ONLY UNDER "First Choice." V105. And which would be the next most important? CODE ONE ANSWER ONLY UNDER "Second Choice." First ChoiceSecond Choice 1 A high level of economic growth11 Making sure this country has strong defense forces22 \*Seeing that people have more say about how things are done at their jobs and in their communities 33 Trying to make our cities and countryside more beautiful 44 Don't know [DO NOT READ OUT] 99 V106. If you had to choose, which one of the things on this card would you say is most important? CODE ONE ANSWER ONLY V107. And which would be the next most important? CODE ONE ANSWER ONLY First ChoiceSecond Choice Maintaining order in the nation11 \*Giving people more say in important government decisions22 Fighting rising prices 33 \*Protecting freedom of speech44 Don't know [DO NOT READ OUT] 99 V108. Here is another list. In your opinion, which one of these is most important? CODE ONE ANSWER ONLY V109. And what would be the next most important? CODE ONE ANSWER ONLY First ChoiceSecond Choice A stable economy 11 \*Progress toward a less impersonal and more humane society22 \*Progress toward a society in which ideas count more than money 33 The fight against crime44 Don't know [DO NOT READ OUT] 99 MatPMat12 index is constructed by summing the number of Postmaterialist items chosen as either first or second choice in its group (these five items are designated with an asterisk above). This produces an index that runs from 0 (no Postmaterialist items are given high priority) to 5 (all five Postmaterialist items are given high priority). SPSS code used to build V1000 is as follows: COMPUTE V1001=0. COMPUTE V1002=0. COMPUTE V1003=0. COMPUTE V1004=0. COMPUTE V1005=0. IF (V104=3 OR V105=3) V1001=1. IF (V106=2 OR V106=4) V1002=1. IF (V107=2 OR V107=4) V1003=1. IF (V108=2 OR V108=3) V1004=1. IF (V109=2 OR V109=3) V1005=1. COMPUTE V1010=9. IF NOT (V104=0 & V105=0 & V106=0 & V107=0 & V108=0 & V109=0) V1010=V1001+V1002+V1003+V1004+V1005.

**Y003.-** Autonomy Index is a computed variable based on the Children qualities battery. It uses only four variables: V22= Children qualities: Religious Faith V24= Children qualities: Obedience V15= Children qualities: Independence V21= Children qualities: Perseverance Only variables with answers to all v22,v24,v15,v21 have an index. The SPSS like formula is: Compute Y003=-5. if v22>=0 and v24>=0 and v15>=0 and v21>=0 then Y003=(v22 + v24)-(v15 +v21).
