Data Collection Organization:

SEREC, Bureau d'études

Fieldwork Period:

15-07-2001 - 25-08-2001.

Universe:

National Population, Both sexes, 18 and more years

Sample size:

1251

Estimated Error:

2,8

Questionnaire:

The survey used the standard WVS questionnaire instead of the more limited Islamic questionnaire. It was used the French questionnaire to make the WVS questionnaire. The WVS questionnaire was translated from the English questionnaire by a member of the research team. The translated questionnaire was also pre-tested. It was pretested in Casablanca with 10-15 persons of different age and status to test comprehension by respondents. Some of the questions on religion had to be eliminated because they caused some surprise, due to general agreement with one answer. A few other questions had to be eliminated because of lack of comprehension. The self anchoring scale of ideology was not well understood, but nevertheless was kept in. The following questions were eliminated from the questionnaire: 11-13-14-15-59-61-63-66-73-D15-D16-D17. Also some substitutions were made during the translation: In Q.15 Muslims was replaced by Trafiquants. In Q. 47 the Church was replaced by Religion. In Q. 47 the Arab League was added as an item. Besides, Church was always replaced by Mosque, and God was replaced by Allah. The sample was designed to be representative of the entire adult population, i.e. 18 years and older, of your country. The lower

age cut-off for the sample was 18 and there was not any upper age cut-off for the sample.

Sample:

In the sample, urban population was over-represented. The sampling stages were: regions-cities/villages-neighborhoods. The final selection was made using random routes. Selection of individual in households was made using sex and age quota. Substitution was made when there was nobody in household after four trials, or when there was a refusal, or there wasn't anybody eligible. Stratification factors were used by region and size of place. The only significant limitation was urban-rural distribution, and that has been corrected through weighting.

Remarks about sampling:

-Final numbers of clusters or sapling points: 30 -Sample unit from office sampling: Random routes-households quota by sex and age in household

Survey procedure:

Personal Face to Face Interview

Fieldwork:

Interviewers were paid sometimes according to performance but not always. The interviewer approach was through calls made at different times of day. The minimum number of re-calls required were 4.

Remarks about non-response:

The number of full productive interview was 1247.

Weighting:

Yes Weighting was used to equilibrate sex-age and urban-rural distribution. Urban-rural distribution was more important with an under-representation of rural population. The weight is a matrix that combines the variables: sex, age and urban-rural distinction, and it is included in the data file
