

**THE FEDERAL DEMOCRATIC REPUBLIC OF
ETHIOPIA**

CENTRAL STATISTICAL AGENCY

**THE 2015/16 ETHIOPIAN HOUSEHOLD
CONSUMPTION – EXPENDITURE (HCE)
SURVEY**

**RESULTS FOR: BENISHANGUL GUMUZ
REGION**

STATISTICAL REPORT

**March 2018
Addis Ababa**

Contents

LIST OF TABLES.....	iii
ACRONYMS.....	xxi
INFORMATIVE REMARKS.....	xxii
CHAPTER 1: INTRODUCTION AND OBJECTIVES1
1.1 Overview.....	1
1.2 Objectives of the HCE Survey.....	4
1.3 Rational of Income Component Exclusion	4
1.4 Usage of CAPI Method	5
1.5 Pilot Survey, Questionnaire Development and Training.	6
1.6 Survey Tools	8
1.7 Organization of the Report	10
CHAPTER 2: CONCEPTS AND DEFINITION	11
2.1 Household Survey.....	11
2.2 Area of Residence.....	11
2.3 Household Characteristics	12
2.4 Employment and Enterprise.....	13
2.5 Household Expenditure.....	14
2.6 Calorie/Food Energy.....	16
CHAPTER 3: SURVEY METHODOLOGY	17
3.1 Coverage.....	17
3.2 Sampling Frame	17
3.3 Sample Design	17
3.4 Sample Size and Selection Scheme	18
CHAPTER 4: FIELD OPERATION.....	21
4.1 Field Organization.....	21
4.2 Data Collection	21
4.3 Field Supervision	25
CHAPTER 5: DATA PROCESSING	27
5.1 Introduction.....	27
5.2 Data Cleaning and Validation	27

STATISTICAL TABLES.....	31
Part A: Socio Economic Indicators.....	33
Part B: Household Consumption and Expenditure Estimates.....	211
 ANNEXES.....	 349
ANNEX I: Distribution of Sampling Units	351
ANNEX II: Estimation Procedures of Total, Ratio and Sampling Errors.....	355
ANNEX III: Standard Errors and Coefficient of Variation of Selected Variables ...	359
ANNEX IV: Survey Questionnaires	363

INFORMATIVE REMARKS

The CSA would like to inform data users that:

1. A separate statistical report is produced to each Region, in order to satisfy data users demand, in general, and fulfill the ever rising interest of regions for detailed statistical information, in particular.
2. Besides to all statistical reports, an analytical report is also produced by the agency and made accessible to users.
3. On top of that an extra statistical report, that reveals distribution and pattern of consumption and expenditures at item level, of the country specific COICOP classification has produced (as part C). However, part C is accessible through an electronic media only.
4. Apart from the Agency's reports a separate report, mainly focused on poverty and growth profile, is produced by the NPC. Although, all reports are prepared using same data set due to differences in the analysis approach, similar results wouldn't be expected. Because CSA's report is prepared at 2015/16 prices and actual household size is used in its analysis, while NPC uses temporal and spatial price adjustments and adult equivalent size for its analysis.

CHAPTER 1

INTRODUCTION AND OBJECTIVES

1.1 Overview

Ethiopia is a country located in the horn of Africa and categorized as one of the fast growing countries, according to UN reports. In a marked departure from its historical past, Ethiopia has been registering robust economic growth and remarkable social and human development over the past two decades. The country has witnessed one of the fastest growing non-oil and non-mineral economies in the world. Reports published by IMF in 2017 revealed that Ethiopia economic growth has been higher than the growth rates registered in most African countries and overtook Kenya as East Africa's largest economy in 2017 (NPC's An Interim Report on Poverty Analysis Study, 2015/16).

According to poverty analysis report prepared by the WMU of the MoFED based on the results obtained from the 1999/2000 Household Income, Consumption and Expenditure (HICE) Survey of the Central Statistical Agency (CSA), at country level about 44 percent of the total population (45% in rural and 37% in urban areas) were found to be below poverty line, while the results of the 2004/05 surveys revealed that about 39 percent of the total population (39.3% in rural and 35.1% in urban areas) were found to be under the poverty line. According to the report on poverty analysis study made by the MoFED using the 2010/11 Household Consumption and Expenditure Survey (HCES) of the CSA shows that the poverty rate has declined to 29.6 percent (30.4% in rural and 25.7% in urban areas). Currently, the report produced by NPC entitled "Ethiopia's Progress Towards Eradicating Poverty: An Interim Report on 2015/16 Poverty Analysis Study" has put 23.5 percent of total population (25.6% in rural and 14.8% in urban areas) were found to be under poverty line in 2015/16. Similarly, the poverty rate of Benushangul Gumuz region was found 54%, 44.5% and 28.9% in 1999/00, 2004/05 and 2010/11, respectively; while the 2015/16 survey based analysis the poverty rate of the region has declined to 26.5 percent.

The government of Ethiopia together with development partners has put poverty reduction strategies high on the agenda, in order to achieve broad-based and sustained economic growth. With firm dedication to sustain the current economic growth the government of Ethiopia has embarked on the third poverty reduction strategic plan, which is referred to as the Growth and Transformation Plans (GTP I for the period 2010/11-2014/15 and GTP II for the period 2015/16-2019/2020) in which GTP I and II supersede the first (Sustainable Development and Poverty Reduction Program, SDPRP) and the second (A Plan for Accelerated and Sustained Development to End Poverty, PASDEP) poverty reduction strategic plans. In line with this, GTP I and II carries forward important strategic directions and aims at a minimum to achieve the Sustainable Development Goals (SDGs). Moreover, the current HCES and HWM surveys are used to evaluate the achievements and challenges observed during the PASDEP time frame and these surveys used as a spring board for Monitoring and Evaluation (M&E) of the GTP I as well as GTP II, which is currently being implemented.

In light of the plan to reduce poverty over time, a strong system of monitoring and evaluation has also been put in place. Consequently, the issue of welfare monitoring in the country arose as part of the Economic Reform Program (ERP). The ERP specifically and strongly underlies to see the effects of the reform program on poverty and building the analytical capacity of the government to monitor and evaluate such effects. To this end, the government has established a Welfare Monitoring System (WMS) in 1996 to oversee the following major activities:

- Establish an information system that provides a continuous picture of the poverty scenario in the country;
- Indicate the impact of reform programs on the level of household welfare;
- Establish follow-up procedures on the various programs and activities targeted towards poverty reduction; and
- Conduct regular statistical surveys to assess, in particular, the efficiency of targeted programs.

The CSA and Ministry of Finance and Economic Development (MoFED), and currently with the National Planning Commission (NPC) have been the key actors in the M&E system in place by way of producing, analyzing and disseminating poverty related data and results. The program has been supported by the Development Assistant Group (DAG) since the establishment of the M&E system. The 2015/16 HCE and HWM surveys were also assisted by World Food Program (WFP), UNICEF and World Bank.

In order to meet the data needs of the WMS, the CSA has been conducting the two surveys that provide poverty related data: the HICE (Currently HCE) and the HWM surveys since 1995/96. The HCE and the HWM surveys provide fundamental information for the designing and M&E of the country's poverty reduction strategy, Sustainable Development and Poverty Reduction Program (SDPRP), various socioeconomic policies and programs and hence monitor the progress towards meeting the MDGs as well as SDGs. The two surveys are inseparable and provide basic data that reflect the standard of living of households, individuals and the society as a whole.

The HCE survey basically provides data on consumption and expenditure of households that reflect the income dimension of poverty, while HWM survey aims at providing socio-economic data that reflect the non-income dimension of poverty. The HCE survey provides statistics on consumption and expenditure of households and HWM survey provides basic indicators on the various socioeconomic areas including health, education, nutrition, access to and utilization and satisfaction of basic facilities/services and related non-income aspects of poverty. The HCE survey has been conducted together with the HWM survey every four-five years since 1995/96. The latest of these HCE surveys is for 2015/16 and covered a sample of 1,344 households of the region. Previous HCE surveys conducted in the region were similarly representative, covered 179, 916, 1,095 and 1,328 households for 1995/96, 1999/00, 2004/05 and 2010/11, respectively.

Several reports have been produced based on the previous surveys including the statistical reports produced by the CSA: report on the 1995/96 HICE survey and HWM survey, report on the 1999/2000 HICE survey and HWM survey, analytical and statistical report on the 2004/5 HCE survey, summary reports for the 1999/2000 HICE and HWM surveys

and reports on the 1998 and 2004 HWM surveys. Furthermore, five major poverty profile reports were produced by the MoFED/ NPC, the first one in 1999 based on the 1995/96 surveys, and the second which under pinned SDPRP in 2000 based on the 1999/00 HICE and HWM survey data sets. Based on the 2004/05 survey, a report on the dynamics of growth and poverty was also produced. Similarly, Poverty Analysis reports were produced using the 2010/11 HCE and HWM Surveys. Furthermore, currently using the 2015/16 HCE an Interim Report on Poverty Analysis Study was also produced.

1.2 Objectives of the HCE survey

The core objective of the HCE survey is to provide data that enable to understand the income dimension of poverty and the major objectives are to:

- Assess the level, extent and distribution of income dimension of poverty;
- Provide data on the levels, distribution and pattern of household expenditure that will be used for analysis of changes in the households' living standard level over time in various socio-economic groups and geographical areas;
- Provide basic data that enables to design, monitor and evaluate the impact of socio- economic policies and programs on households/individuals living standard;
- Furnish series of data for assessing poverty situations, in general, and food security, in particular;
- Provide data for compiling household accounts in the system of national accounts, especially in the estimation of private consumption expenditure; and
- Obtain weights and other useful information for the construction and /or rebasing of consumer price indices at various levels and geographical areas.

1.3 Rationale of Income Component Exclusion

In contrast to previous three similar surveys the “income” component was not captured in the current two surveys, making the 2010/11 and 2015/16 to be as HCE surveys rather than HICE survey. The value/ importance of income data, particularly in developing economies, is typically very low and thus little was lost by the exclusion of the income module/ section of the survey. Generally, income data is quite difficult to collect,

especially when a large portion of the population is engaged in subsistence agriculture and/or informal sectors (underground activities). Furthermore, expenditure and consumption values are widely preferred to income estimates for the sake of welfare analysis (see, for example deaton & Zaide, 2002). Using consumption data can fill the gaps of subsistence farming, in-kind transactions, income generated through irregular activities, socially unacceptable activities (such as begging, prostitution, gambling, etc.), and other components that income tends to significantly exclude in developing economies.

In the Ethiopian context, previous surveys shows that income statistics estimates derived from HICE surveys were usually underestimated. Factors that might affect quality of income data could be different. However, the underestimate status of household income could be primarily explained by the following core elements/ causes. That is:

- Capturing of household income data is not an easy task just due to the fact that the structural behavior of major economic activities, where a large portion of households/population is engaged, in developing economies (on top of being engaging in subsistence agriculture) is dominantly micro & small scale business enterprise and also is mainly informal sector type (usually characterized as underground economy).
- Due to its nature income data is highly exposed to respondents (i.e., reported income by households) under reporting bias.

1.4 Usage of Computer Assisted Personal Interview (CAPI) Method

In the last four surveys (1995/96, 1999/00, 2004/05 & 2010/11) data collection was conducted using a paper-based questionnaire. The advancement and sophistication of digital technology leads to the usage of Computer Assisted Personal Interview (CAPI) Method in the data collection of 2015/16 HCE and HWM Survey. CAPI is an application in CSPro and it is similar to a regular data entry application, but involves making use of some additional features like it determines the question order and performs editing of responses.

A small size laptop computer was given to each enumerators and supervisor which were involved in the surveys. CSPro program was installed and questionnaires of HCE and

HWM Surveys were uploaded in the CAPI platform of the software before going to the field for data collection.

1.5 Pilot Survey, Questionnaire Development and Training

1.5.1 Pilot Survey

In past surveys, CSA had used a paper-based questionnaire, but current development in technology leads to use a digital technology for data collection. The major draw backs of using paper-based questionnaire, among others, are the following.

- Printing of questionnaires and transporting of it to the field has a cost burden and also it was laborious task.
- In the data collection, there is no systematic controlling mechanism whether the enumerator had collected valid/ consistent data.
- The data collected on the paper questionnaire had to be transported to main office for data processing. This task had risks like that of questionnaire may distorted, damaged or lost.
- Completed questionnaires had to be manually edited and coded before data entry, which affected the timeliness of the survey.
- The data entered from the completed questionnaire faced to data entry errors.

Because of such observed draw backs on paper based questionnaire in past surveys, CSA has decided to use CAPI method for the data collection in the 2015/16 HCE and HWM surveys. In line with this, a pilot survey is conducted with the objective of testing and evaluating:-

- The capacity and handling of the tool;
- The time taken to collect data using CAPI method;
- Applicability and usefulness of the tool;
- Advantage and disadvantages/ drawbacks of the tool compared to usual method (use of hard copy/ paper questionnaire) and;
- How to control the consistency and validity of data using computer program and how to keep backup data files.

In line with this, the pilot survey had been conducted for one month period time (Data were collected from mid-February to mid-March 2015) in rural and urban areas of two regions (Oromiya and Addis Ababa). The pilot survey covered a total of 9 EAs and 136 households (112 in urban and 24 in rural areas).

1.5.2 Questionnaire Development

As per the change to a new method of data collection using digital instrument (CAPI), undoubtedly the survey questionnaire has to redesign. Accordingly, based on the pilot exercise a new draft questionnaire has been developed and distributed to main data users (Governmental and research institute). As a result comments, suggestions, feedbacks and valuable ideas were forwarded from respective users, and the CSA has used these useful inputs to refine and finalize the survey questionnaire.

1.5.3 Field Staff Training

Unlike the previous three HICE surveys in the 2015/16 HCE and HWM surveys the training was carried out in one phase (similar to the 2010/11 program) by bringing all actors of the actual field implementation process, i.e.; all enumerators, field supervisors/editors and coordinators in one training center from 1-30 June 2015. All necessary arrangements has been made, including accommodation and meal services for trainees as well as trainers at the center, in order to enable scaling the intensity of the training program by creating an opportunity of having an ample time and favorable condition to facilitate group discussion programs in the evening (after dinner time).

Training was given by 12 subject matter experts for 30 days. About 421 trainees that includes 293 enumerators, 89 team leaders and 25 Statisticians (from Statistical Branch Offices) as well as and 12 Junior Statisticians and 2 Statistical Technicians (from Head Office) were participated in the training. The training had, basically, three sessions. Theoretical session, panel group discussion session, and a two days field practice session. The panel discussion session has been conducted in the evening just after dinner, usually 8:00 to 10:00 PM, every day. The theoretical training was focusing on theoretical discussions on concepts, definitions, and principles of interview, and how to complete

questionnaires. The training had also focused on practical sessions which include mock interviews and two-days field practice both in rural and urban areas. The objectives of practical interviewing of households were two fold. First, it enabled to assess how well the theoretical class discussions were understood by all participants. The second objective was to examine the practical difficulties pertaining to the various socioeconomic groups, which would likely be encountered during the actual fieldwork. In general, the training was more detailed in both theoretical and practical aspects to ensure the full competence of the field staff in collecting the required information.

In line with the plan to use CAPI, a four day special training was given to field staff how to manage and collect data using CAPI with the right subject matter specialists. Besides, an instruction manual was prepared which guides enumerators how to handle and manage the new tool.

1.6 Survey Tools

Due to its nature the HCE survey demands various tools for its implementation. The following are, among others, the main tools used to collect the HCE data.

Questionnaire: a digital (soft) copy together with a paper print hard copy booklet type questionnaire has been used for data collection. The design of the questionnaire has structured/organized into five main parts (forms). The main components of the survey questionnaire are:

Form 0: is used to gather/ collect basic household information that could help to assess the general livelihood nature of a household and its members, such as: source of household income, status and scope of engagement in agriculture (diversity and specialization), safety net (asset accumulation) participation, participation in micro and small scale business enterprise, accessibility and/or credit facility status from micro-finance institution, ...etc.

Form 1: is used to collect data on demographic characteristics and economic activity of household members, such as: age, sex, marital status, education, income contribution status, economic activity and other related variables.

Form 2 (2A & 2B): is used to collect actual consumption (quantity consumed) and equivalent expenditure of food, beverages and tobacco items, that would have been actually consumed by the household (members of the household) within the reference period of the survey. Note that the first three consecutive day's consumption being collected in Form 2A, and 2B is used to collect the second phase (consecutive 4 days) of the survey week.

Form 3 (3A, 3B & 3C): Household consumption and expenditure data on non-durable goods and frequent services has been collected using three segments of form 3. Of which 3A and 3B are designed to handle three and four day's reference period data, respectively; while 3C has been used to capture a full month reference period data.

Form 4 (4A-4E): Household expenditure data of durable goods and Less-Frequent services was administered in form 4.

In order to facilitate a systematic way of data collection approach, these goods and services are grouped into classes and data were collected using five chapters of the main module in such a way that expenditure data on:

- Clothing and footwear was collected in 4A;
- Dwelling rent, water, fuel and energy, furnitures & furnishings, household equipment and operation were collected by use of form 4B;
- Health, transport and communication goods and services has been collected in form 4C;
- Education, recreation, entertainment, cultural and sport goods and services were collected by the use of 4D; and
- Personal goods and services, financial services, and others including operational cost of production with respect to UnIncorporated Household Economic Enterprises were collected in Form 4E of the questionnaire;

Dairy book: Consumption expenditure of food and beverages data are collected, at first on daily basis, by listing every consumed item by the household (every household member) in each day in a dairy book, to facilitate exhaustiveness of consumption. And, then a summary of attributes are transferred to the main questionnaire.

Measuring tools: Digital type kitchen balance which can approximate in one gram (unlike the previous analog type which can approximate in 100 grams) and measuring tape are used for consumption/quantity data collection.

1.7 Organization of the Report

The statistical report is organized in two parts; part A and B. Part A mainly focuses on socio-economic indicators that show distribution of households and population with respect to some selected demographic and economic characteristics classified by annual household expenditure per capita quintile aggregates. While Part B focuses on household consumption-expenditure estimates, such as: Per Household (PHh) expenditure, Per Person expenditure (PP) indicators in monetary terms and consumption expenditure shares as well as average daily caloric intake indicators aggregated by Household (Hh) size, educational status of the Hh head, source and type (cash/ in kind) of expenditure, and at division and group breakdown levels of a country specific COICOP classification..

Apart from this report, the Agency would like to inform data users that detailed statistical report is being produced and will be available in a CD Rom as well as in the Agency's official website. (www.csa.gov.et).

CHAPTER 2

CONCEPTS AND DEFINITIONS

This chapter serves as a glossary for core elements of the survey and as a guideline, clarifying and facilitating easy understanding of aggregated figures. The terms and basic conceptual points are grouped by: household survey, area of residence, household characteristics, employment & enterprise, household expenditure and calorie/ food energy.

2.1 Household Survey

Household survey is a method of data collection using interviewer/ enumerator with designated households as to obtain and record responses (with application of practical measurement if necessary) to a specific list of questions and/or area of interest. A survey differs from a census in that only a sample of households is covered.

2.2 Area of Residence

Urban Centre: An urban centre, in principle, is often defined as a locality with 2000 or more inhabitants. In this survey, however, for practical purposes an urban centre includes the following, regardless of the number of inhabitants.

- i) All administrative capitals (Regional, Zonal and Wereda capitals),
- ii) Residential areas with Urban Kebeles (UKs) not included in (i),
- iii) All localities that are not included either in (i) or (ii) and which have a population of 1000 or more persons and whose inhabitants are primarily engaged in non- agricultural activities.

Urban Kebele (UK): is the lowest administrative unit in an urban centre with its own jurisdiction. It is a locality (usually known as Kebele) formed by the inhabitants of urban dwellers and usually constitutes a part of the urban centre. In the case of Addis Ababa City Administration, however, the lowest administrative unit is Woreda (instead of Kebele).

Rural Kebele (RK): is the lowest administrative unit in a settled rural area with its own jurisdiction. It is an association of rural dwellers formed by the inhabitants of a given area whose members are engaged either in agricultural and/or non-agricultural activities.

Enumeration Area (EA): is a unit of land delineated for the purpose of enumeration housing units and population without omission or duplication. An EA usually consists of 150 to 200 households in rural areas and 150 to 200 housing units in urban areas. An enumeration area should be related to an urban or a rural kebele in one of the following ways.

- An EA may be equal to an RK if the number of the households in the RK is less than or equal to 150 – 200 in rural areas; and is equal to a UK in urban areas if the number of housing units in the UK is 150 – 200.
- An EA may be a part of an RK or a UK but its delineation cannot extend outside the border of the kebele.

Collective Quarter: A collective quarter is a premise (a housing unit, a building or a compound) in which a number of unrelated persons reside together, and share common facilities. Examples of collective quarters are monasteries, prisons, boarding schools, home for aged, children's homes, work camps, military barracks, etc. It is important to note that in the premises of some collective quarters, there may be private households.

2.3 Household Characteristics

Household: Constitutes of a person or group of persons, irrespective of whether related or not who normally live together in the same housing unit or group of housing units and who have common cooking arrangements.

Head of Household: head of a household is a person who economically supports or manages the household or, for reasons of age or respect, is considered as the head of the members of the household or otherwise declares himself or herself as the head of a household. Head of a household could be male or female.

Member of Household: Person constituting a household is called member of the household. The following are considered as members of a household:

- i) All persons who lived and ate with the household for at least six months including those who were not present at the time of the survey but were expected to be absent from the household for less than six months.
- ii) All guests and visitors who ate and stayed with the household for six months or more.
- iii) Housemaids, guards, baby-sitters, etc. who lived and ate with the household, even for less than six months.

Household Size: Is the total number of members of a household.

2.4 Employment and Enterprise

Unincorporated Household Enterprise: Unincorporated Household Enterprise (UnIHE) is an economic enterprise where goods and services are produced for sale. This also includes those engaged in buying and selling activities. An agricultural enterprise producing for own consumption (Household Consumption) only is covered by the definition. Generally, the type of enterprise considered as an unincorporated household enterprise by the survey is an economic enterprise run by the household/member of a household in which its primary aim being to manage the livelihood of the household and doesn't have any distinct demarcation between its income/expenditure and the households' income/expenditure.

Informal sector: For this survey informal sector is defined as UnIHE which:

- is mainly engaged in marketed production, and
- not registered company or cooperative, and
- has no full written book of account, and
- has less than 10 persons engaged in the activity, and
- has no licence

Therefore, for this survey an enterprise/establishment/activity is considered informal if it meets the aforementioned five criteria.

Productive Activity: This is an act of selling (making available to the market) the output of an activity (the whole or in part) in kind or in cash: This includes, but is not limited to, working at an enterprise (public or private) for salary/wages. Here too, all activities that are carried out in rural areas by private peasant agricultural holders are considered to be productive.

Employer: is a person who hires at least one employee for her/his enterprise/establishment or activity. Anyone who uses hired labour for her/his activity and takes part in the productive activity is considered an employer.

Employee: An employee is any worker hired by someone on contract, permanent or temporary basis. The payment could be in cash or kind on weekly, bimonthly or monthly basis.

Self Employed: This is an individual who works in his own enterprise including agriculture without hiring any labour. For the purpose of this survey, those who use only family labour without payment also are considered self-employed.

Unpaid Family Worker: A member of a household who is working for the enterprise/establishment or activity of the household without payment.

2.5 Household Expenditure

Consumer goods and Services: goods and services used by a household to directly satisfy the personal needs and wants of its members

Household consumption expenditure: is the value of consumer goods and services acquired, used or paid for by a household through direct monetary purchases, own account production, barter or as income in kind for the satisfaction of the needs and wants of its members.

Actual final consumption: The actual final consumption of a household is the sum of its household consumption expenditure plus the value of consumer goods and services acquired or used through transfers from government, non-profit institutions, other households, etc. This is the most appropriate concept for welfare analysis as it takes into account all consumer goods and services available to a household for the satisfaction of the needs and wants of its members. However some social transfers, such as free education, health, etc, which are received in the form

of services from government and non-profit making institutions and in the form of other services from households are extremely difficult to value and have therefore been excluded from all HCE data in the Ethiopian context.

Household expenditure: - is defined as the sum of household consumption and non-consumption expenditures. “Non-consumption expenditures” are those that are incurred by a household without acquiring (receiving) any goods or services in return (i.e., ignoring any potential goodwill) for the satisfaction of the needs of its members. Household expenditure represents the total outlay made by a household to satisfy its needs and meet its “legal” commitments. The non-consumption expenditures of households include current transfers of cash, goods and services to other households such as gifts donations, remittances, alimony, child support, etc. Other items included are contributions to non-profit making institutions that do not give rise to the provisions of goods and services to the donor household; compulsory transfers to government such as income and other direct taxes (e.g. wealth taxes), compulsory fees and fines, and social security contributions.

Per Capita: per capita is simply per person, regardless of age and sex.

Household Expenditure Per Capita Quintile: - the household expenditure per capita quintiles are used to disaggregate households by total household per capita expenditure levels. The quintiles are calculated by first ordering all households in ascending order by value of household per capita expenditure and then dividing them into five equal parts such that the first group includes the 20% of households with the lowest annual per capita expenditure and the last group includes the 20% of households with the highest annual per capita expenditure. The lower and upper limits in terms of values of each household expenditure quintile per capita at country level are presented in Summary table 1 below.

Summary Table 1: Household Expenditure Per Capita Quintiles at Country Level (Total)

Quintile	% of HHs	Annual Household Expenditure Per Capita in Birr - Country Level	
		Lower Limit	Upper Limit
I	20	-	≤5379.48
II	20	5379.81	7688.06
III	20	7688.11	10121.95
IV	20	10123.36	15109.21
V	20	≥15110.22	-

N.B:-

- At 2015/16 National average prices
- Prices are not spatially adjusted for regional price differences

2.6 Calorie/Food Energy

Calorie: is an energy required to heat a gram of water by one degree Celsius. A kilocalorie, termed as Kcal, is equivalent to 1000 calories.

Gross calorie: is the total amount of calories/Kilocalories in a given weight of food product, prior to discarding any inedible materials. In other words, gross calorie refers to crude calorie that is estimated based on total purchased/produced weight of consumed food items without discarding any inedible part. These are determined mainly, based on the Food Composition Tables (FCT) prepared by the Ethiopian Health and Nutrition Research Institute (ENHRI) and the Food and Agriculture Organization of the United Nations (FAO), 1998.

Net Calorie: The total number of Calories/Kilocalories in a given weight of food after removing the inedible portions. It is the gross calorie deflated by (or minus) the proportion of the inedible portion (part/material), termed as refuse. It is also derived from the FCT calculated by the ENHRI and the FAO, 1998.

Refuse: Refuse refers to the percentage of the total purchased/produced weight that is discarded while preparing food. Refuse includes bones, pits, shells and other inedible portions that could be eaten but as a rule are discarded (potato parings and tough outer leaves of vegetables, for example).

CHAPTER 3

SURVEY METHODOLOGY

3.1 Coverage

The 2015/16 HCE Sample Survey covered all zones of the region. In rural part of the region it was planned to cover 48 Enumeration Areas (EAs) and 576 households. Accordingly, the survey covered all planned EAs and households, successfully. The overall response rate is 100 percent for EAs as well as for households. Similarly, for urban areas 48 EAs and 768 households were planned to be covered, ultimately, 100 percent of EAs and households were successfully covered by the survey.

3.2 Sampling Frame

The 2007 Population and Housing Census was used as a sampling frame from which the rural and urban EAs were selected. A fresh list of households for each selected EA was prepared at the beginning of the survey period. Households were then selected for inclusion in the survey by choosing a random number as a starting point in the list and selecting every n^{th} household (n being the necessary number to achieve the desired number of households in each sample EA).

3.3 Sample Design

In order to produce a representative sample, the country was stratified into the following four broad categories; rural, major urban centers, medium towns and small size towns.

Category I - Rural:- In this category the rural areas of all Regional States as well as the rural part of Dire Dawa City Administration are included. The rural part of each Regional State as well as Dire Dawa City Administration were considered to be a survey domain (i.e., reporting level) for which the major findings of the survey are reported. Accordingly, a total of 10 survey domains were formed under this category. There was no domain in this category for Addis Ababa City Administration because the city doesn't have a rural part. A stratified two-stage cluster sample design was adopted to select EAs and HHs,

where EAs are the Primary Sampling Units (PSUs) and the Second Sampling Units (SSUs).

Category II - Major urban centers: - In this category all regional capitals (9 cities), twelve additional major urban centers with larger populations as well as 10 sub cities of Addis Ababa resulting in a total of 31 major urban domains were included. The survey was designed to provide an estimate for all 31 urban centers (including 10 sub cities of A.A.) included under this category. In this category too, a stratified two stage cluster sample design was adopted to select the primary sampling units (the EAs). Sixteen households from each of the primary sampling units (EAs) in each reporting level were then selected as a Second Stage Unit (SSU).

Category III & IV - Other urban centers:- Urban centers in the country, other than those under category II, were grouped under category III & IV. A domain of other urban centers was formed for eight regions. There is no domain in category III & IV for Harari Regional State and Addis Ababa and Dire Dawa City Administration as they do not have urban centers other than those grouped under category II. Unlike the above two categories, a stratified three stage cluster sample design was adopted to select sample towns, EAs & HHs. In this case the primary sampling units were towns, whereas, enumeration areas and households were the second & third stage sampling units, respectively.

3.4 Sample Size and Selection Scheme

Category I: - A total of 864 EAs and 10368 households were selected from this category. Sample EAs of each reporting level were selected using Probability Proportional to Size (PPS) techniques; size being number of households obtained from the 2007 Population and Housing Census. Twelve households per EA were systematically selected from the fresh list of households prepared at the beginning of the survey.

Category II: - In this category 744 EAs and 11,904 households were selected. Sample EAs from each reporting level in this category were also selected using probability proportional to size with systematic sampling techniques; size being number of

households obtained from the 2007 Population and Housing Census. Sixteen households in each of the selected EAs were systematically selected from a fresh list of households prepared at the beginning of the survey.

Category III & IV: - One hundred seven urban centers, 498 EAs and 7,968 households were selected in these two categories. Urban centers from each domain as well as EAs in each urban center were selected systematically using the PPS techniques; size being the number of households of the 2007 Census. Sixteen households in each of the selected EAs were systematically selected from a fresh list of households prepared at the beginning of the survey.

Summary Table 2: Distribution of Aggregate Level Sample Allocation of the 2015/16 HCE Survey by Region

Region	Sample EAs & HHs									
	Major Urban		Other Urban		Urban Total		Rural		Urban + Rural	
	EA	HH	EA	HH	EA	HH	EA	HH	EA	HH
Country Total	744	11,904	498	7,968	1,242	19,872	864	10,368	2,106	30,240
Tigray	24	384	48	768	72	1,152	96	1,152	168	2,304
Affar	24	384	24	384	48	768	48	576	96	1,344
Amhara	96	1,536	114	1,824	210	3,360	168	2,016	378	5,376
Oromiya	120	1,920	138	2,208	258	4,128	192	2,304	450	6,432
Somali	24	384	48	768	72	1,152	48	576	120	1,728
Benish-Gumuz	24	384	24	384	48	768	48	576	96	1,344
SNNP	120	1,920	78	1,248	198	3,168	168	2,016	366	5,184
Gambella	24	384	24	384	48	768	48	576	96	1,344
Harari	24	384			24	384	24	288	48	672
Addis Ababa	240	3,840			240	3,840			240	3,840
Dire Dawa	24	384			24	384	24	288	48	672

All in all, including country and regional level aggregates (i.e., Total, Rural & Urban domains), a total of 71 reporting levels were formed under this sample design method. For the overall detailed distribution of planned and covered EAs and HHs refer to Annex I. Estimation procedures, standard errors and coefficient of variations (CVs) for the

estimates of selected variables are also presented in Annex II and Annex III, respectively. Accordingly, the English Version questionnaire of the 2015/ 16 survey is presented in Annex IV.

CHAPTER 4

FIELD OPERATION

4.1 Field Organization

The CSA branch offices led by the Branch Office Desks at the Head Office did the major work of the field organization. All the 25 branch offices of the CSA had fully participated in the survey undertaking, starting from recruitment of field staff, sending the trainees for training, in deploying the field staff to their field, field supervision and retrieval of the completed questionnaires periodically to the head office, where the data processing activities took place. They were also responsible for administering financial and logistics aspects of the survey. For this purpose, each and every statistical branch office was assigned a statistician on permanent basis, acting as a field work officers, to facilitate, coordinate, monitor and evaluation of the overall field work activities. Additionally, line government organizations especially Kebeles also had a significant role in facilitating the fieldwork. Writing administrative letters that introduce the work and the enumerators to the local people particularly the sample households, provision of field guides, etc were tasks of the local government units.

4.2 Data Collection

4.2.1 Data Collection System

The HCE and HWM surveys are considered as twin surveys as the HWM survey is a basis for non-consumption dimension of poverty. Therefore, to avoid any inconsistency of data between the two surveys, that could be observed due to differences in data collection period; unlike the previous survey, the 2015/16 survey was designed to conduct both surveys simultaneously. Accordingly, the data collections of both surveys have taken place for one full year from 8 July 2015 to 7 July 2016. About 89 field operation (i.e. data collection) team, each comprised of three enumerators (one for HWMS and two for HCES) and one supervisor and/field editor organized in order to execute the actual field work. Furthermore, these 89 teams were organized in 25 statistical branch offices of the

CSA. Moreover, as stated above in each statistical branch offices an experienced senior statistician was assigned on permanent basis to coordinate, monitor and evaluate the actual field work. Each team was responsible to collect data in 24 EAs throughout the survey year. In the 2015/16 survey (like that of the 2010/11), the data collection was distributed across all months of the survey year ensuring balanced distribution across seasons. The 2015/16 HICE survey, therefore, has better seasonal distribution compared to the first three previous HICE surveys (1995/96, 1999/00 & 2004/05). The data collection activities in one EA were taking 15 days for each team.

In the entire selected sample units, data were collected from 12 sample households from each rural sample EA and 16 households from each urban sample EA. For the HCE survey, in every EA two enumerators were assigned for the data collection in such a way that an enumerator has to collect data from six households in rural and from eight households in urban areas. Data were collected in such a way that the six rural and eight urban households that were handled by one enumerator were interviewed over a period of one week. The enumerator assigned in rural area visited two households daily and those enumerators assigned in urban EA visited two-three households daily, so that data has been collected from each sample household twice in the survey week. It is believed that the frequent visits made by the enumerators to each household were essential to control errors arising from memory lapse that is common in household surveys of this nature. On the other hand, for HWM survey data collection, one enumerator was responsible to collect all 12 rural or 16 urban households of the EA in the 15 days period of data collection.

In relation to the nature and type of expenditure, different reference periods were used to collect information from each household/ member of household. The reference periods used for data collection of different variables are given in Summary Table 4.

Summary Table 4: Reference Periods of Data Collection

Type of Data	Reference Periods
1. Population Characteristics	Beginning of Survey date
2. Food, Beverages and Tobacco	Twice weekly (3&4 days)
3. Clothing and Footwear	Last 3 & Last 12 Months
4. Housing, water, electricity, fuel & power	Conditional:
▪ Water	3 & 4 Days & Last month
▪ Electricity	3 & 4 Days & Last month
▪ Fuel & power	3 & 4 Days & Last Months
▪ Rent Durable Goods and Less frequent Services	Last 3 & Last 12 Months
5. Furnishings, Household Equipment & Maintenance	Conditional:
• Goods & Services for Routine Household Maintenance	3 & 4 Days & Last month
• Durable Goods and Less frequent Services	Last 3 & Last 12 Months
6. Health	Conditional:
• Pharmaceutical Products & Drugs	3 & 4 Days & Last month
• Medical Treatment and Other Health Expenses	Last 3 & Last 12 Months
7. Transport	Conditional:
• Transport Service	3 & 4 Days & Last month
• Purchase, Operation & Durable Goods & Less frequent Services	Last 3 & Last 12 Months
8. Communication	Conditional:
• Frequent Services	3 & 4 Days & Last month
• Equipments, Rent and Maintenance	Last 3 & Last 12 Months
9. Recreation & Culture	Conditional:
• Recreational and Cultural Services and News paper	Twice Weekly (3-4 Days)
• Equipments, Accessories & Repairs	Last 3 & Last 12 Months
10. Education	Conditional:
• Educational Materials	3 & 4 Days & Last month
• Educational Services	Last 3 & Last 12 Months
11. Miscellaneous Goods and Services	Conditional:
• Personal Care	3 & 4 Days & Last month
• Personal Effects, Durable Goods & Less frequent services	Last 3 & Last 12 Months

4.2.2 Data Collection Method

Both interview and objective methods of data collection were introduced to collect data from households and individuals. Interview method was used to collect information related to population characteristics, amount of expenditure, type of expenditure and source of expenditure. Objective method was used, basically, to measure consumption of food and beverages. Also, objective method had been used to collect consumption/quantity data on non-industrial commodities such as fire wood, charcoal, freely accessed water, etc.

4.2.2 Conducting of Price Survey

Apart from the HCE survey, price survey was also conducted side by side in a nearby market: that is a market located around the selected EA. The basic objectives of the price survey were to:

- furnish price data that would be used for valuation of missing data (in cases where value or quantity is missing), and
- provide price data that would be used for M & E of data quality (consistency checking activities) during data processing.

4.2.4 Digital Technology for Data Collection

In the 2015/16 HCE and HWM surveys a digital data collection CAPI method is implemented. This method has given numerous advantages with some drawbacks. Some of the advantages; among others, are:-

- The accuracy of the data is relatively increased, i.e.; since the edit specification program is installed, the CAPI can internally check whether the entered data is valid or not. For instance, to collect quantity and value data in the HCE survey, the minimum and maximum value is set for specific quantity of each item. So that, a pop up window warns the enumerator for invalid value entered in the data collection.
- The time taken to collect data is relatively minimized
- The data collection device is portable and easy to handle

- Basic field materials (questionnaire, manuals, codebook, calculator and so on) are available in one place (on CAPI)

Even if these advantages were achieved, some drawbacks appeared in the data collection process, such as:-

- Risk of computer virus in the first phase of data collection (problem solved later).
- Problem of keeping back up data files in the first phase of data collection (problem solved later).
- Problem of data transfer (sending mechanism) to the main data store on time.
- Problem to collect all types of data using CAPI. Specially, data collected in “diary book” could not be managed using CAPI.
- It was difficult to check consistency and completeness of entered data for other personnel (supervisor or field coordinator).

4.3 Field Supervision

In survey of this type, regular and intensive supervision is necessary and crucial component of the whole data collection process. A regular supervision, which is also compulsory activity in the CSA surveys, has been undertaken at various levels to ensure the quality of the data. The data collection activities of each team had been managed by the team’s supervisor/ field editor who was responsible for the supervision, field editing and coordination activities. In order to strengthen the overall coordination and supervision activities at statistical branch office level, in each branch office a senior statistician was assigned on permanent basis to coordinate, monitor and evaluate only to handle the HCE and HWM surveys data collection activities. The statistician had undergone a close supervision and follow-up on the overall HCE and HWM surveys data collection activities. Moreover, branch office heads and professionals from the head office that were engaged in the training of the field staff also were involved in the actual field supervision. Members of top management of CSA had also visited the field work in the entire period of the survey.

CHAPTER 5

DATA PROCESSING

5.1 Introduction

The data processing activities of the HCE survey were undertaken at the head office. Completed questionnaire and filled-in data in soft copy were returned periodically from the field to the data processing directorate at the head office. These data processing activities included editing, coding, verification, consistency checking and data validation activities which has been carried out after completing the data collection activities, since the data was collected using electronical device, manually operated processing task (unlike previous surveys) is terminated, so that the editing and coding activity was also carried out by subject matter experts. Finally, estimation with proper sampling weights and tabulation activities were carried out in the final stage of the data processing after getting complete clean data sets.

5.2 Data Cleaning and Validation

Generally, due to complexity nature/ behavior of the subject matter, unlike most surveys, to be able to preserve data quality, data cleaning should be done in two stages. In the first stage a normal and usual way of editing & coding activity has to be carried out, which is a usual duty and responsibility of editing and coding staff. While in the second stage the in-depth data cleaning part has to be carried out by subject matter experts.

Primary level editing, coding and cleaning: In the first stage data cleaning level (usually manually implemented):

- Editing & coding activities on the filled-in questionnaires has to be carried out, before data entry task being implemented, and then,
- Upon accomplishment of data capturing/ entry, based on relevant edit-specification, monitoring and evaluation of data validity has to be tested and inconsistent observation (whenever exist) will be edited and verified.

However, in the 2015/16 survey the primary stage data cleaning task didn't carried out manually, rather unlike previous surveys, it was directly carried out by subject matter experts in collaboration with computer programmer. At this stage various editing and coding activities has been conducted, such as:

- assigning of new codes for newly appeared commodities, especially in the area of prepared food items (particularly out of home consumption), and industrial products;
- correction of measuring unit errors;
- converting of local measuring units to metric equivalents;
- correction of misplaced observations, data being collected using improper modules; and other similar editorial activities has been carried out.

Consistency, imputation, validation and estimation: Data validation and cleaning activity was carried out by subject matter specialists and data processing programmers. The data cleaning and validity checking activities were carried out at commodity, household, and visit levels and has been done systematically. Various type of edit specification documents were prepared by subject matter specialists and used for the purpose. Data consistency and validation activities have passed through various phases and steps, such as:

- imputation of missing observations (either value or quantity) using the available results of the price survey that was collected at the time of the survey from a near-by market places;
- validity and consistency of quantity and value of consumption items were checked at a visit level based on internal ¹ and/or external ² price data;
- conversion of consumption of own production in to value equivalent using the observed quantities and the external price survey data;

¹Internal price is the value of consumption expenditure of commodities converted into price per standard unit.

²External price is the price of commodities generated from the price survey that has been collected during the HCE survey in the nearby market places of the selected EAs.

- estimation of calorie contents for out of home consumption;
- merging of 1st and 2nd visit data to produce weekly data sets;
- estimation of annual consumption-expenditure based on weekly data;
- conversion of 3 months reference period data to annual;
- comparison between annual expenditures generated from three months reference period basis and that of the 12 months reference data sets, in order to decide whether to utilize the 3 or 12 month's data for the analysis, and similar validation techniques have been carried out.

After completing consistency checking and validation activities annual estimates were created. Due to the nature of the survey, consistency checking, imputation, estimation and data validation activity has taken a long period of time and has been finalized in September 2017. As a result upon submission of the survey data some poverty indicators have been estimated and officially launched on 10 October 2017 by NPC.

STATISTICAL TABLES

PART A

SOCIO-ECONOMIC
INDICATORS

Table A1.1 Population Estimates by Age Group, Sex and Household Size - BENISHANGUL-GUMUZ REGION

Household size	Sex	A G E G R O U P (Y E A R)

ANNEX II: ESTIMATION PROCEDURE OF TOTAL, RATIO AND SAMPLING ERRORS

The following formulas were used to estimate the required variables by reporting levels.

1. Estimate of Total \hat{Y}_h in Rural Domain (Category I)

$$\hat{Y}_h = \sum_{i=1}^{n_h} \frac{M_h H_{hi}}{n_h M_{hi} h_{hi}} \sum_{j=1}^{h_{hi}} Y_{hij} = \sum_{i=1}^{n_h} \sum_{j=1}^{h_{hi}} W_{hi} Y_{hij} \text{-----} \quad (1)$$

Where,

$$W_{hi} = \frac{M_h H_{hi}}{n_h M_{hi} h_{hi}} \text{ is the basic sampling weight}$$

2. Estimate of Total \hat{Y}_h in Major Urban Domain (Category II)

$$\hat{Y}_h = \sum_{a=1}^3 \sum_{i=1}^{n_{aih}} \sum_{j=1}^{h_{hai}} W_{hai} Y_{haij} \text{-----} \quad (2)$$

Where,

$$W_{hai} = \frac{M_{ha} H_{hai}}{n_{ha} M_{hai} h_{hai}} \text{ is the basic sampling weight}$$

3. Estimate of Total \hat{Y}_h in Other Urban Domain (Category III)

$$\begin{aligned} \hat{Y}_h &= \sum_{i=1}^{n_h} \frac{M_h}{n_h n_{hi}} \sum_{j=1}^{n_{hi}} \frac{H_{hij}}{M_{hij} h_{hij}} \sum_{k=1}^{h_{hij}} Y_{hijk} \text{-----} \quad (3) \\ &= \sum_{i=1}^{n_h} \sum_{j=1}^{n_{hi}} \sum_{k=1}^{h_{hij}} W_{hij} Y_{hijk} \end{aligned}$$

Where,

$$W_{hij} = \frac{M_h H_{ij}}{n_h n_{hi} M_{hij} h_{hij}} \text{ is basic sampling weight}$$

The following notations were used in the formula:

M_h = Total number of households in stratum h obtained from the sampling frame.

M_{hi} = Total number of households in EA/PSU i for rural and urban domain or in urban center/PSU i for other urban domain, stratum h obtained from the sampling frame.

n_h = Number of successfully covered sample EAs for rural domain in stratum h.

H_{hi} = Total number of households obtained from the survey listing in sample EA/PSU i stratum h for rural domains.

h_{hi} = Total number of households successfully covered in EA/PSU i stratum h for rural domain.

M_{ha} = Total adjusted number of households of the domain in substrata a and stratum h obtained from the sampling frame

H_{hai} = Total number of households obtained from the survey listing in EA/PSU i of substratum a and stratum h

n_{ha} = Number of successfully covered sample EAs/PSUs for major urban domain in substratum a and stratum h

M_{hai} = Total number of households in EA/PSU i in substratum a and stratum h obtained from the sampling frame

h_{hai} = Total number of sampled and covered households in sampled EA/PSU i substratum a and stratum h

\hat{Y}_{haij} = The observed value of characteristic y for household j, in EA/PSU i, substratum a and stratum h of Major Urban Domain

M_{hij} = Total number of households in EA/SSU j, urban centers/PSU i and stratum h obtained from the sampling frame for other urban center domain.

n_{hi} = Number of sample EAs successfully covered in urban center/PSU i and stratum h for other urban center domain.

H_{hij} = Total number of households obtained from the survey listing in EA/SSU j, urban center/PSU i and stratum h for other urban center domain

h_{hij} = Number of sample households successfully covered in EA /SSU j, urban center/PSU i and stratum h for other urban center domain.

Y_{hij} = The observed value of a characteristic y for household j in sampled EA/PSU i and stratum h for rural domain.

Y_{hijk} = The observed value of a characteristic y for household k in EA/SSUj, urban center/PSU i and stratum h for other urban domain.

Note: Estimate of total at country level, \hat{Y} , is obtained by summing up stratum/domain total estimates.

$$\hat{Y} = \sum_{h=1} \hat{Y}_h$$

4. Sampling Variance of the Estimates:

Sampling variance of estimate of stratum total are given by the following formulas:

The variance of domain or reporting total estimate is:

$$V(\hat{Y}_h) = \frac{n_h}{n_h - 1} \left[\sum_{i=1}^{n_h} \hat{Y}_{hi}^2 - \frac{\hat{Y}_h^2}{n_h} \right] \text{-----} \quad (4)$$

in which $\hat{Y}_{hi} = W_{hi} \sum_{j=1}^{h_{hi}} Y_{hij}$ for rural and major urban centers domains,

and $\hat{Y}_{hi} = \sum_{j=1}^{n_{hi}} W_{hij} \sum_{k=1}^{h_{hij}} y_{hijk}$ for other urban center domain.

$$V(\hat{Y}) = \sum_h V(\hat{Y}_h) \text{-----} \quad (5)$$

$$SE(\hat{Y}_h) = \sqrt{Var(\hat{Y}_h)} \text{-----} \quad (6)$$

5. Coefficient of Variation (CV) and Confidence Interval (CI)

The following formulas were used to calculate CV and CI of the domain (reporting level) total.

The coefficient of variation (CV) of domain total in percentage is:

$$CV(\hat{Y}_h) = \frac{\sqrt{VAR(\hat{Y})}}{\hat{Y}} * 100 \text{ -----} \quad (7)$$

And ninety-five percent confidence interval (CI) of domain total:

$$\hat{Y}_h \pm 1.96 * SE(\hat{Y}_h) \text{ -----} \quad (8)$$

6. Ratio Estimates:

$$\hat{R}_h = \frac{\hat{Y}_h}{\hat{X}_h} \text{ and } \hat{R} = \frac{\hat{Y}}{\hat{X}} \text{ -----} \quad (9)$$

Where, the numerator and the denominator are estimates of domain totals of characteristic y and x, respectively.

$$Var(\hat{R}_h) = \frac{1}{\hat{X}_h^2} [Var(\hat{Y}_h) + \hat{R}_h^2 Var(\hat{X}_h) - 2\hat{R}_h Cov(\hat{Y}_h, \hat{X}_h)] \text{-----} \quad (10)$$

In which

$$Cov(\hat{Y}_h, \hat{X}_h) = \frac{n_h}{n_h - 1} \left[\sum_{i=1}^{n_h} \hat{Y}_{hi} \hat{X}_{hi} - \frac{\hat{Y}_h \hat{X}_h}{n_h} \right] \text{-----} \quad (11)$$

Estimates of standard error, coefficient of variation and confidence interval for the ratio estimate can be calculated by adopting formulas 6, 7 and 8.

Q1112: EDUCATION - HIGHEST GRADE COMPLETED	
Code	B. ACCORDING THE TO FORMER CURRICULUM
09	Grade 9 completed
10	Grade 10 completed
11	Grade 11 completed
12	Grade 12 completed (Took ESLCE)
13	Certificate: Atleast one year Training above Grade 12
14	Certificate: Teachers Training Program
15	1 st year completed in college/University Program
16	2 nd Year course completed in college/University Program
17	Diploma - College/University Program
18	3 rd Year course completed in college/university program
19	1 st Degree, BA, BSC, BLL, etc (Non Specialized)
20	Above 1 st Degree
Code	C. ACCORDING TO THE CURRENT CURRICULUM
21	Grade 9 completed
22	Grade 10 completed
23	Grade 11 completed in perparatory program
24	Grade 12 completed in preparatory program
25	TVET Level 1: Level 1 completed in TVET program
26	TVET Level 2: Level 2 completed in TVET program
27	TVET Level 3: Level 3 completed in TVET program
28	TVET Level 4: Level 4 completed in TVET program
29	TVET Level 5: Level 5 completed in TVET program
30	(10+1) program certificate: participated in (10+1) program has got certificate
31	(10+2) program 1 st year completed
32	(10+2) program cetificate: 2 nd year course completed and has got certificate
33	(10+3) program 1 st year completed: 1 st year course completed in (10+3) program planned at diploma level
34	(10+3) program 2 st year completed: 2 st year course completed in (10+3) program planned at diploma level
35	(10+3) program diploma: 3 rd year course completed and has got diploma
36	1 st year college or level 4: 1 st year course completed in collage or level 4 program planned at degree or level 4
37	2 nd year college or level 4: 2 nd year course completed in collage or level 4 program planned at degree or level 4
38	3 rd year college or level 4: 3 rd year course completed in collage or level 4 program planned at degree or level 4
39	1 st degree or level 4: has got 1 st degree or level 4
40	Above 1 st degree or level 4: Atleast 1 st year course completed beyond/ above 1 st degree
93	Literacy campaign: participated in Literacy campaign and can read and write, but do not continued in formal education
94	Adult Education Program : participated in Adult Education Program and can read and write
95	Alterative Basic Education (ABE) Level 1 completed
96	Alterative Basic Education (ABE) Level 2 completed
97	Alterative Basic Education (ABE) Level 3 completed (including currently participaing Grade 5 formal education)
98	Informal Education: can read and write through church, Quaran, etc

FORM 1.1: DEMOGRAPHIC CHARACTERISTICS AND ECONOMIC ACTIVITY OF HOUSEHOLD MEMBERS (HhM)[illegible]

Q1117: MAIN REASON FOR NOT WORKING	
CODE	
01	Unemployed
02	Student/Training course
03	Home maker
04	Retired
05	Depend on remittance
06	Old age
07	Disability
08	Sick (inc.mental * injury)
09	Too young (Applicable for age 10-14 years only)
98	Others

CODE	Q1119: MAIN EMPLOYED OCCUPATION TYPE
01=	Legislators, Senior Officials and Managers
02=	Professionals
03=	Technicians and Associate Professionals
04=	Clerks
05=	Service workers and Shop & Market Sales Workers
06=	Skilled Agricultural and Fishery Workers
07=	Craft and Related Trade Workers
08=	Plant and Machine Operators and Assemblers
09=	Elementary Occupations
10=	Member of Defence forces

Q1118: MAIN STATUS IN EMPLOYMENT	
CODE	
01	Employer (working employer)
11	Own-Account work (Self Employed) - Formal sector
12	Own-Account work (Self Employed) - Informal sector

4D	4	4					2	0	0					
4E	4	5					2	0	0					

NOTE: Q 503 AND 504

RESPONDENT'S LEVEL

More than one HhM might have been participated in responding to the survey questionnaire, though the degree of participation differs. Therefore, according to the degree of participation, rank each respondent and identify the 1st and the 2nd as complementary level, respectively. Finally record their Id code.

If a single HhM has been responded for all questions throughout the survey then record its ID in the 1st level and 00 for the 2nd level.

Q 505

SURVEY (DATA COLLECTION) RESULT

- 11= Completed according to schedule
- 12= Completed, through a single callback/ appointment
- 13= Completed, through double callbacks/ appointment
- 21 = Completed, but need multi-callbacks/ appointment
- 22= Completed, with the help effort of supervisor/ coordinator
- 23= Completed, but need help/ effort of local administrators
- 31= Not started, Hh moved from survey area.
- 32= Interrupted/ Not completed, Hh Moved from survey area
- 41= Not started; Eligible respondent/ HhM not present in home
- 42= Interrupted; Eligible respondent/ HhM not present in home
- 51= Interrupted/ Not completed; Hh faced condolence/ sympathy
- 52= Interrupted/ not completed; accident/illness of Hh member
- 61= Not started; Hh Not cooperate/ refuse (Total refusal)
- 62= Interrupted/ Not completed; Hh refuse to cooperate.
