## المقدمة

تمثل المسوح الاقتصادية حجر الأساس لبناء منظومة الحسابات القومية في العديد من البلدان، إضافة لأهميتها بحد ذاتها كقاعدة بيانات عن الأنشطة الاقتصادية المختلفة. وحيث أن الأنشطة الاقتصادية تساهم في الناتج المحلي الإجمالي لفلسطين وتشغيل الأيدي العاملة، فقد واصل الجهاز المركزي للإحصاء الفلسطيني تنفيذ سلسلة المسوح الاقتصادية بهدف توفير البيانات الإحصائية الشاملة والدقيقة عن واقع وأداء الاقتصاد الفلسطيني.

يسر الجهاز المركزي للإحصاء الفلسطيني أن يصدر العدد الثامن عشر من تقارير سلسلة المسوح الاقتصادية في فلسطين والذي يغطي البيانات الإحصائية عن عام الإسناد الزمني 2012. ويأتي هذا التقرير استمراراً لما هو معمول به في الأعوام السابقة، وهو بمثابة حلقة من سلسلة المسوح الاقتصادية والتي باشر الجهاز بتنفيذها اعتباراً من عام الإسناد الزمني 1994 والتي تغطي معظم الأنشطة الاقتصادية التي تمارس في فلسطين.

يعرض التقرير الحالي أهم النتائج الإحصائية التي تم اشتقاقها من البيانات التي تم جمعها من الميدان لمختلف أنشطة سلسلة المسوح الاقتصادية والتي تشمل الصناعة، التجارة الداخلية، الإنشاءات، الخدمات، النقل والتخزين، والاتصالات والمعلومات. حيث تم عرض نتائج التقرير في ثلاث مجموعات رئيسية من الجداول لفلسطين والضفة الغربية وقطاع غزة، وتم تبويب هذه الجداول حسب النشاط الاقتصادي الرئيسي للمؤسسات المشمولة بالمسح على مستوى الحد الثاني من التصنيف الصناعي الدولي لجميع الأنشطة الاقتصادية (ISIC-4)، ويأتي عرض النتائج لمختلف مركبات سلسلة المسوح الاقتصادية في تقرير واحد ضمن سياسة الجهاز لإتاحة المجال للمقارنة بين النتائج حسب النشاط الاقتصادي ضمن تقرير واحد.

تشكل البيانات التي توفرها سلسلة المسوح الاقتصادية رافداً أساسياً لأغراض إعداد الحسابات القومية لفلسطين بشكل دوري ونأمل في نفس الوقت أن تقي البيانات التي توفرها هذه المسوح بأغراض واحتياجات المستخدمين في مجالات التخطيط ورسم السياسات التنموية واتخاذ القرار وكذلك الدارسين والباحثين والمهتمين بقضايا الاقتصاد الوطني.

والله ولي التوفيق،،،

علا عوض

## **Introduction**

A comprehensive and detailed statistical database of any economic activity is a prerequisite for planning and policy making and this applies to economic activities that play a major role in most modern world economies.

The Palestinian Central Bureau of Statistics is pleased to issue the eighteenth volume of economic surveys for the Palestine, including statistical tables of findings. This edition presents the findings of the surveys conducted for 2012 as the reference year and covers most of the economic activities operating in the Palestine since 1994.

Economic surveys of various fields constitute the basic foundations for the compilation of National Accounts for Palestine. It is hoped that they will also fulfill the various needs and expectations of users in both the public and private sectors.

## Chapter One

**Main Findings**

The main findings of the Economic Survey series 2012 in Palestine are as follows:

**1.1 Number of Enterprises**

The results of the survey show that there were 121,264 non-agricultural enterprises in 2012 in the activities covered in the Palestinian economy. This number was distributed as follows: internal trade activities 57.1%, services activities 27.8%, industrial activities 13.4%, transport and storage activities 0.7%, construction activities 0.5%, and information and communication activities 0.5%.

**Percentage Distribution of Operational Economic Enterprises in the Private and Non Governmental Organization Sector in Palestine by Economic Activity, 2012**

**1.2 Number of Employed Persons**

There were 379,703 employed persons in economic enterprises distributed as follows: internal trade activities 40.0%, services activities 32.7%, industrial activities 20.7%, construction activities 3.0%, transport and storage activities 1.8%, and information and communications activities 1.8%.

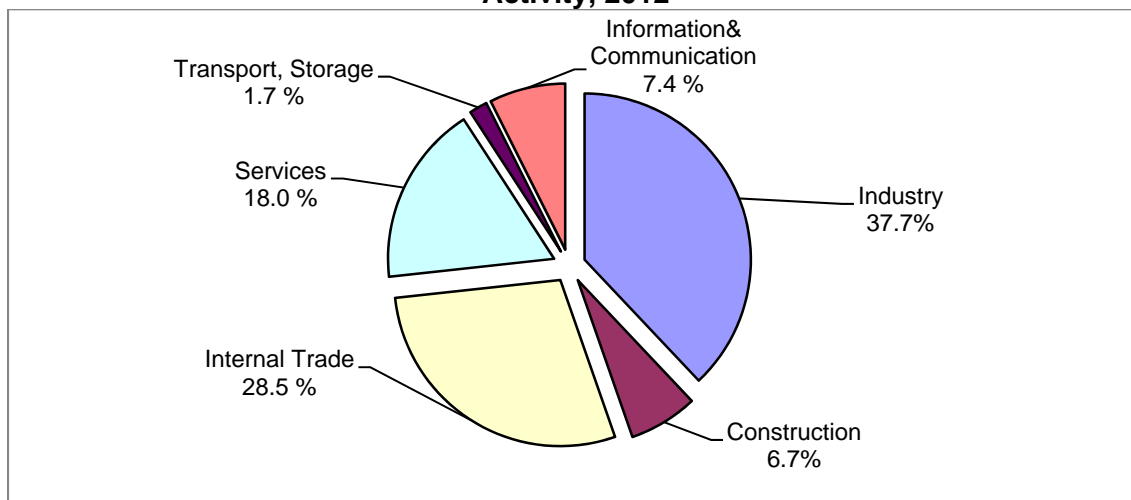

**Percentage Distribution of Employed Persons in Economic Operational Enterprises in the Private and Non Governmental Organization Sector in Palestine by Economic Activity, 2012**

### 1.3 Output

The value of output for the economic enterprises was USD 10,063.8 million distributed by economic activity as follows: industrial activities 37.7%, internal trade activities 28.5%, services activities 18.0%, information and communications activities 7.4%, construction activities 6.7%, and transport and storage activities 1.7%.

**Percentage Distribution of Output from Operational Economic Enterprises in the Private and Non Governmental Organization Sector in the Palestine by Economic Activity, 2012**

### 1.4 Value Added

The value added for the economic enterprises was USD 6,462.8 million distributed by economic activity as follows: internal trade 36.1%, industrial activities 26.5%, services activities 21.3%, information and communications activities 9.8%, construction activities 4.7%, and transport and storage activities 1.6%.

**Percentage Distribution of Value Added from Operational Economic Enterprises in the Private and Non Governmental Organization Sector in the Palestine by Economic Activity, 2012**

## Chapter Two

### Methodology and Data Quality

This chapter describes the questionnaire used in the economic surveys series, the coverage, sampling and implementation stage, and the accuracy of the data for statistical errors and non-statistical errors in all of the survey stages that include data collection and data entry.

#### 2.1 Questionnaire

All of the economic surveys series used the same questionnaire, with a few different characteristics for each survey. The design of the 2012 questionnaire takes into account the major economic variables pertaining to the sector examined and the needs to be met to compile the National Accounts for Palestine.

The questionnaire included these variables:

1. The persons engaged in the enterprise and compensation of these employees.
2. Value of output from the main activity and secondary activity.
3. Production inputs of goods and services.
4. Payments and transfers.
5. Taxes on production.
6. Assets and capital formation.

#### 2.2 Coverage and Sampling

##### 2.2.1 Coverage

The eighteenth round of the economic survey series was conducted based on the Establishments Census of 2012. The economic surveys series cover activities in accordance with ISIC-4.

##### 2.2.2 Sample Design

The sample of the economic surveys series is a single-stage stratified random-systematic sample in which the enterprise constitutes the primary sampling unit (PSU). Three levels of strata were used to draw up an efficient representative sample (i.e., economic activity, size of workforce and geographical location). The sample size in 2012 was 9,860 enterprises out of the 126,323 enterprises comprising the survey frame.

##### 2.2.3 Implementation Stage

This phase included field work operations, data processing, and tabulation:

- Field work operations: These took place following the recruitment and training of qualified interviewers responsible for data collection in the field.
- Data processing and tabulation: This included:
  - Developing a data entry program and training of data entry clerks
  - Organizing data entry processes
  - Post-data entry editing
  - Tabulation.

## 2.3 Accuracy of the Data

### 2.3.1. Statistical Errors

The findings of the survey were affected by statistical errors due to the use of sampling in conducting the surveys for units of the target population. This increases the chances of variances occurring from the actual values obtained from comprehensive enumeration. The variance of the key items in the survey was computed and dissemination was carried out on the Palestine as a whole for reasons related to sample design and computation of the variance of the different indicators.

The tables above illustrate the variation of the most distinct variables of economic activities for the Palestine. These tables demonstrate that there is no problem in the calculation of variation for the Palestine as a whole, nor on published levels.

**2.3.2 Non-Sampling Errors**

These types of error could appear in one or all of the survey stages that include data collection and data entry:

**Response rate values:**

- Sample size in 2012 was 9,860 enterprises in Palestine.
- Non-response cases: 1,372
- Over-coverage cases: 539
- Net sample: 9,860-539= 9,321

- Response rate: 85.2%
- Non-response rate: 14.8%

Response errors: This type of error is related to respondents, field workers, and data entry personnel. To avoid mistakes and reduce their impact, a series of mechanisms were implemented that aimed to enhance the accuracy of the data through the process of data collection from the field and data processing.

## **2.4 Comparability**

Published data in this report are compatible with ISIC-4 on economic activities, as in the 2011 and 2010 series of economic surveys. Previous reports are compatible to ISIC-3 on economic activities.

## **2.5 Data Quality Control**

### **2.5.1 Field Work**

- A specialized field work team with a background in economics was selected and trained theoretically and practically on the surveys' questionnaire.
- The main field work team was selected based on skills acquired from the training course.
- Field work visits were made by both field work and project management staff to monitor and follow up the data collection process and the progress of work. Around 95% of completed questionnaires were reviewed and corrected if necessary and comments and notes were directed to the team accordingly.
- Various levels of supervision and monitoring took place according to the following division:
  - Field workers
  - Field worker supervisors
  - Field work coordinator (each with monitoring responsibilities).
- Project management received a daily report on progress and response rates.
- A refresher training course was conducted during the stage of data collection to reinforce the main points made in training and to answer questions by field workers about issues faced in the field.
- Some institutions were visited by field workers for a second time to confirm the accuracy of the data obtained in the first interview. These institutions were selected at random by withdrawing a random sample of the original sample of the survey and these data were compared with data from the series surveys.

### **2.5.2 Data Processing**

To ensure the quality and consistency of data, a set of measures was introduced as follows:

- Creation of a data entry program prior to the collection of data to ensure this would be ready.
- A set of validation rules were applied to the program to check the consistency of data.
- The efficiency of the program was pre-tested by entering a few questionnaires including incorrect information and checking its efficiency in capturing the incorrect information.
- Well-trained data entry personnel were selected and trained for main data entry.
- Weekly data files were received by project management to be checked for accuracy and consistency: correction notes were provided to data entry management for implementation.

## 2.6 Notes on Data

1. Differences in the results of certain indicators are due to approximation.
2. Some economic activities at second ISIC (two digits) were combined with previous activity to maintain the confidentiality of data in accordance with the Statistics Law of 2000.
3. Financial data were collected in NIS, USD and JD, but were converted and published in USD.
4. There are some zero values, either because such values were low or were unavailable in some enterprises in the selected sample.
5. The services survey covers profit, non-profit enterprises, and output of non-profit enterprises in the National Accounts System 1993 (SNA 93) equal to the value of intermediate consumption and the value of employee compensation, in addition to the value of net taxes and fees on production and the value of depreciation of fixed assets.
6. Data of economic surveys series 2012 depends on Establishment Census 2012, while data of economic surveys series 2011 depends on Establishment Census 2007,. By comparing results of the two reports, they indicated a rise in the number of establishments as a result of a gap between Census of 2012 and Census of 2007 in the number of establishment as a central business register is not available for updating the frame.

- **Exchange rates**

USD / NIS = 3.7299

USD / JD = 0.7090

## Chapter Three

### Concepts and Definitions

This chapter defines the concepts used in the preparation of the survey tools on which data collection and processing were based. These concepts and their definitions are based on international recommendations in the fields of economic statistics and national accounts, while taking into consideration the particular aspects of the Palestinian Territory.

#### **Statistical Unit:**

An economic entity that is capable, in its own right, of owning assets, incurring liabilities, and engaging in economic activities and transactions with other entities.

#### **Employed Persons:**

Persons aged 15 years and over who were work at least one hour during the reference period, or who were not at work during the reference period, but held a job or owned business from which they were temporarily absent (because of illness, vacation, temporarily stoppage, or any other reason) he\ she was employer, self employed, wage employed, unpaid family member or other. The employed person is normally classified in one of two categories according to the number of weekly work hours, i.e. 1–14 work hours and 15 work hours and above. Also the absence due to sick leave, vacation, temporarily stoppage, or any other reason considered employed from 1-14 hours.

#### **Output:**

This is the value of the final products of goods and services produced by a certain establishment capable of being provided to other units though they can be self-consumed or for the purposes of self gross fixed capital formation. Production includes two categories: Final products and the so-called under-operating products, which means products that take a long time to produce such as livestock and establishment works. The value of the majority of goods can be estimated at the moment the production process is completed. However, the production of some goods may exceed the accounting period (such as the case of under-operating products). The value of such products is estimated and registered during that accounting period as, for example, the case of establishment works and winter crops.

#### **Intermediate Consumption:**

It is the goods and services consumed as inputs, used up or transformed during the production process. It is measured during a specific period in time in a way similar to measuring production. Intermediate consumption is estimated by purchase price, The value of gross intermediate consumption on the level of the total economy is the same whether calculated by purchase or producers' price. However, on a detailed level, the two evaluations vary.

#### **Value Added:**

Value added is a central concept of production and refers to the generated value of any unit that carries out any productive activity. Gross value added is defined as the value of gross output less the value of intermediate consumption. The net value added is defined as the gross value less the value of fixed capital consumption.

#### **Compensation of Employees:**

Indicator measures the total value of cash and kind wages in enterprises, including social security contributions, which is paid to any employee for work performed.

### **Taxes on Product:**

These are taxes that are compulsory cash or in kind payments payable by producers to the general government. They consist of taxes on products payable on goods and services for production, sale, or exchange and other taxes payable on production by resident producers as a result of carrying out the production process.

### **Assets:**

These are tangible or intangible (computer software, artistic, original) and are an output of the production process. They are used frequently or continuously in other production processes for longer than a one-year period.

### **Depreciation:**

This is the value of the assets which can be reproduced and depreciated during the year: depreciation is calculated on the current substitutive value.

### **Gross Fixed Capital Formation:**

Is the total value of producer acquisitions less disposals of fixed assets during the accounting period plus certain addition to the value of non-produced asset released by the production activity of institutional units, fixed assets are tangible or intangible assets produced as from process of production that are themselves used repeatedly or continuously in other processes of production for more than one year.

### **Main Economic Activity:**

This is the main work of the enterprise based on the (ISIC, rev4) and that contribute to the large proportion of the value added, whenever more than one activity exists in the enterprise.

### **Calculation of Statistical Indicators:**

1. Compensation per waged employee =  $\frac{\text{Compensation of Employees}}{\text{Waged Employees}}$
2. Output per employed person =  $\frac{\text{Output}}{\text{Employed Persons}}$
3. Output per waged employee =  $\frac{\text{Output}}{\text{Waged Employees}}$
4. Value added per employed person =  $\frac{\text{Value Added}}{\text{Employed Persons}}$
5. Value added per waged employee =  $\frac{\text{Value Added}}{\text{Waged Employees}}$
6. Value added to output =  $\frac{\text{Value Added}}{\text{Output}} \times 100$
7. Compensation to value added =  $\frac{\text{Compensation of Employees}}{\text{Value Added}} \times 100$
8. Depreciation to output =  $\frac{\text{Annual Depreciation}}{\text{Output}} \times 100$
