Census of Industrial Production: 2013

Dear Contributor

This census is meant to obtain benchmark statistical information on the structure and development of industry in Zimbabwe. The statistics resulting from this enquiry are needed by individuals, Government as well as other organisations concerned with industrial and general economic performance and development. In particular they help in the planning, monitoring, evaluation and decision taking in both the private and the public sectors of the economy. They are critical for planning and executing economic programmes such as the Zimbabwe Agenda for Sustainable Socio-Economic Transformation (ZIMASSET) which is the government's blue-print

All information provided by you in this return **is confidential to the Zimbabwe National Statistics Agency (ZIMSTAT) as provided for in the Census and Statistics Act**. To preserve anonymity, your figures will only be published after they have been rendered anonymous by consolidation with those of at least three other businesses or by other statistical means of preserving their confidentiality.

Please provide estimates where figures of accounting accuracy are not available or the precise analysis of aggregates in your accounts would involve considerable extra work. ***Notes to help you complete the return are provided.***

So that this Agency can better serve industry and the Government, I should appreciate your co-operation in the prompt completion of this return. If you have any queries please write to or telephone this Agency. My staff will be pleased to help you at any time.
