ABSTRACT

The FAO has developed a monitoring system in 26 food crisis countries to better understand the impacts of various shocks on agricultural livelihoods, food security and local value chains. The Monitoring System consists of primary data collected from households on a periodic basis (more or less every four months, depending on seasonality). The FAO launched a round 3 of data collection in Colombia between 22 July and 22 August 2022. Data were conducted through face-to-face interviews in ten departments of Colombia: Antioquia, Arauca, Bolívar, Boyacá, Cesar, Chocó, Córdoba, La Guajira, Nariño and Putumayo. A total of 3240 households were surveyed, 324 rural households in each department. For more information, please go to <https://data-in-emergencies.fao.org/pages/monitoring>

Sampling

SAMPLING PROCEDURE

Two-stage sampling was applied – cluster sampling based on the geostatistical sample frame provided by the government of Colombia, followed by simple random sampling to ensure that all households in the targeted cluster had an equal chance of being selected. A quota was not applied to sub-groups of interest at the regional level and no weights were needed for population sub-groups by activity type. The surveyed agricultural households were not represented in the sample. Therefore, the crop and livestock sections should be considered descriptive, not representative.

WEIGHTING

Regional base weights were computed at administrative level 1.
