STUDY TYPE
Population and Housing Census [hh/popcen]

SERIES INFORMATION
The mammoth task of census data processing involving almost three million schedules has been successfully completed by the National Institute of Statistics (NIS). Some of the salient results of the census are presented in this report. The other results will be published in due course after detailed analysis. The release of the final figures of the 2019 Census marks an important stage in the statistical history of Cambodia. The previous census conducted in 2008 was the second in 46 years as no official census took place since 1962.

ABSTRACT
The population census is the most fundamental source of national population data required by a country for administrative purposes as well as for economic and social planning and research. It is expected to provide a comprehensive and reliable inventory of a country's population. Apart from the size of population in each of the administrative units which is the basic information provided by the census, an analysis of the census data provides information on trends in population growth, age and sex structure of the population, the levels of mortality and fertility, the course of migration, trends in urbanization and on many more characteristics of the population. A study of the current demographic levels and past trends is very essential in making population projections that form the basis of national plans for economic development and other welfare programmes.

The demographic, social and economic indicators as well as other bench mark data at small area levels produced by the 2008 Census will go a long way in monitoring and evaluating the implementation of National Strategic Development Plan programmes in the future."
