## Sampling

### SAMPLING PROCEDURE

GYTS uses a global standardized methodology that includes a two-stage sample design with schools selected with a probability proportional to enrollment size. The classes within selected schools are chosen randomly and all students in selected classes are eligible to participate in the survey.

A total of 1,712 students aged 13-15 participated in the Indonesia - Bekasi GYTS.

A total of 1,492 students aged 13-15 participated in the Indonesia - Jakarta GYTS.

A total of 1,417 students aged 13-15 participated in the Indonesia - Medan GYTS.

### RESPONSE RATE

Bekasi - The school response rate was 100.0%, the class response rate was 100.0%, the student response rate was 95.5%, and the overall response rate was 95.5%.

Jakarta - The school response rate was 96.0%, the class response rate was 100.0%, the student response rate was 93.3%, and the overall response rate was 89.6%.

Medan - The school response rate was 96.0%, the class response rate was 100.0%, the student response rate was 91.5%, and the overall response rate was 87.9%.

### WEIGHTING

The weighting formula used is:

$$W=W1 * W2 * f1 * f2 * f3*f4$$

The list below shows what each variable in the formula represents.

W1 - The inverse of the probability of selecting the school

W2 - The inverse of the probability of selecting the class within the school

f1 - a school-level nonresponse adjustment factor calculated by school size category (small, medium, large)

f2 - a class adjustment factor calculated by school

f3 - a student-level nonresponse adjustment factor calculated by class

f4 - a post stratification adjustment factor calculated by gender and grade
