## Sampling

## SAMPLING PROCEDURE

GYTS uses a global standardized methodology that includes a two-stage sample design with schools selected with a probability proportional to enrollment size. The classes within selected schools are chosen randomly and all students in selected classes are eligible to participate in the survey.

Eligible students in grades 6, 7, 8, and 9 completed the survey, of which 660 were aged 13-15 years.

## RESPONSE RATE

The school response rate was 88.0%, the class response rate was 100.0%, the student response rate was 81.0% and the overall response rate was 71.2%.

## WEIGHTING

The weighting formula used is:

$$W=W1 * W2 * f1 * f2 * f3*f4$$

The list below shows what each variable in the formula represents.

W1 - The inverse of the probability of selecting the school

W2 - The inverse of the probability of selecting the class within the school

f1 - a school-level nonresponse adjustment factor calculated by school size category (small, medium, large)

f2 - a class adjustment factor calculated by school

f3 - a student-level nonresponse adjustment factor calculated by class  
 f4 - a post stratification adjustment factor calculated by gender and grade
