Sampling

SAMPLING PROCEDURE
GYTS uses a global standardized methodology that includes a two-stage sample design with schools selected with a probability proportional to enrollment size. The classes within selected schools are chosen randomly and all students in selected classes are eligible to participate in the survey.

A total of 2,012 students participated in the Libya GYTS of which 1,361 were ages 13 to 15 years.

RESPONSE RATE
The overall response rate of all students
surveyed was 97.9%.

WEIGHTING
The weighting formula used is:
$W = W_1 * W_2 * f_1 * f_2 * f_3 * f_4$
The list below shows what each variable in the formula represents.
W_1 - The inverse of the probability of selecting the school
W_2 - The inverse of the probability of selecting the class within the school
f_1 - a school-level nonresponse adjustment factor calculated by school size category (small, medium, large)
f_2 - a class adjustment factor calculated by school
f_3 - a student-level nonresponse adjustment factor calculated by class
f_4 - a post stratification adjustment factor calculated by gender and grade
