## Sampling

### SAMPLING PROCEDURE

GYTS uses a global standardized methodology that includes a two-stage sample design with schools selected with a probability proportional to enrollment size. The classes within selected schools are chosen randomly and all students in selected classes are eligible to participate in the survey.

Huancaayo: A total of 1,183 students aged 13-15 in Secondary 1 - 5 completed the survey.

Ica City: A total of 1,853 students aged 13-15 in Secondary 1 - 5 completed the survey.

Lima: A total of 1,671 students aged 13-15 in Secondary 1 - 5 completed the survey.

Trujillo: A total of 1,857 students aged 13-15 in Secondary 1 - 5 completed the survey.

Tarapota: A total of 2,128 students aged 13-15 in Secondary 1 - 5 completed the survey.

### RESPONSE RATE

Huancaayo: The overall response rate was 91.8%.

Ica City: The overall response rate was 73.4%.

Lima: The overall response rate was 86.6%.

Trujillo: The overall response rate was 80.4%.

Tarapota: The overall response rate was 91.0%

### WEIGHTING

The weighting formula used is:

$$W=W1 * W2 * f1 * f2 * f3*f4$$

The list below shows what each variable in the formula represents.

W1 - The inverse of the probability of selecting the school

W2 - The inverse of the probability of selecting the class within the school

f1 - a school-level nonresponse adjustment factor calculated by school size category (small, medium, large)

f2 - a class adjustment factor calculated by school

f3 - a student-level nonresponse adjustment factor calculated by class

f4 - a post stratification adjustment factor calculated by gender and grade
