Sampling

SAMPLING PROCEDURE

A sex- and age- stratified random sample design was used to produce representative data for that age range Seychelles.

RESPONSE RATE

The overall response rate was 80.3%.

WEIGHTING

Analysis weights reflect adjustments for differences in the age-sex composition of the sample population as compared to the target population.

Different weight variables are available per Step:

wStep1 - for interview data

wStep2 - for physical measures

wStep3 - for biochemical measures

This allows for differences in the weight calculation for each Step of the survey as the age-sex composition of the respondents to each Step can differ slightly due to refusal or drop out.

Data collection

DATES OF DATA COLLECTION

Start	End
2004-04	2004-09

DATA COLLECTION MODE

Face-to-face [f2f]

DATA COLLECTION NOTES

Cholestech LDX was used for biochemical measurements. Bayer Ascensia Elite was also used for blood glucose measurements if fasting glucose was $\geq 5.6\text{ mmol/l}$.
