## Sampling

## SAMPLING PROCEDURE

GYTS uses a global standardized methodology that includes a two-stage sample design with schools selected with a probability proportional to enrollment size. The classes within selected schools are chosen randomly and all students in selected classes are eligible to participate in the survey.

Danang: A total of 1,336 students aged 13-15 in grades 8, 9 and 10 completed the survey.

Haiphong: A total of 793 students aged 13-15 in grades 8, 9 and 10 completed the survey.

Hanoi: A total of 1,151 students aged 13-15 in grades 8, 9 and 10 completed the survey.

Ho Chi Minh: A total of 1,017 students aged 13-15 in grades 8, 9 and 10 completed the survey.

Tuenquang: A total of 435 students aged 13-15 in grades 8, 9 and 10 completed the survey.

## RESPONSE RATE

Danang: The overall response rate was 94.7%.

Haiphong: The overall response rate was 94.0%.

Hanoi: The overall response rate was 96.4%.

Ho Chi Minh: The overall response rate was 77.4%

Tuenquang: The overall response rate was 82.9%.

## WEIGHTING

The weighting formula used is:

$$W=W1 * W2 * f1 * f2 * f3*f4$$

The list below shows what each variable in the formula represents.

W1 - The inverse of the probability of selecting the school

W2 - The inverse of the probability of selecting the class within the school

f1 - a school-level nonresponse adjustment factor calculated by school size category (small, medium, large)

f2 - a class adjustment factor calculated by school

f3 - a student-level nonresponse adjustment factor calculated by class

f4 - a post stratification adjustment factor calculated by gender and grade

## Data collection

### DATES OF DATA COLLECTION
