## Sampling

## SAMPLING PROCEDURE

GYTS uses a global standardized methodology that includes a two-stage sample design with schools selected with a probability proportional to enrollment size. The classes within selected schools are chosen randomly and all students in selected classes are eligible to participate in the survey.

Harare: A total of 1,181 13-15 year old students in Grade 7, Forms 1, 2 and 3 completed the survey.

Manicaland: A total of 948 13-15 year old students in Grade 7, Forms 1, 2 and 3 completed the survey.

## RESPONSE RATE

Harare: The overall response rate was 81.7%.

Manicaland: The overall response rate was 69.4%.

## WEIGHTING

The weighting formula used is:

$$W=W1 * W2 * f1 * f2 * f3*f4$$

The list below shows what each variable in the formula represents.

W1 - The inverse of the probability of selecting the school

W2 - The inverse of the probability of selecting the class within the school

f1 - a school-level nonresponse adjustment factor calculated by school size category (small, medium, large)

f2 - a class adjustment factor calculated by school  
 f3 - a student-level nonresponse adjustment factor calculated by class  
 f4 - a post stratification adjustment factor calculated by gender and grade
