ABSTRACT

The FAO has developed a monitoring system in 26 food crisis countries to better understand the impacts of various shocks on agricultural livelihoods, food security and local value chains. The Monitoring System consists of primary data collected from households on a periodic basis (more or less every four months, depending on seasonality). Data collection was carried out in Iraq from 8 to 21 June 2023 using telephone interviews (CATI) in 18 governorates during the harvest season of main crops, such as wheat and barley. The sample size is representative at national and at governorate-level. For more information, please go to <https://data-in-emergencies.fao.org/pages/monitoring>

Sampling

SAMPLING PROCEDURE

Data collection took place in the 18 governorates of Iraq using telephone interviews (CATI). A total of 2,513 households were interviewed (1,510 non-agricultural households and 1,003 agricultural households) using a panel list of agricultural households (interviewed in the previous data collection rounds) and the Random Digit Dialing (RDD) approach to complete the target. The sample target of 136 households per governorate was reached in all governorates. This sample size is representative at national and at governorate-level with a 95% confidence level and a 10% margin of error.

WEIGHTING

Data were weighted at the analytical stage to ensure that the regional population distribution was adequately represented. The following were used and combined: weight base at adm1 using the population counts, weight wealth at adm1 using the access to flush toilets as a proxy for wealth and weight education at adm0 using the education level of the head of household.
