ABSTRACT
The FAO has developed a monitoring system in 26 food crisis countries to better understand the impacts of various shocks on agricultural livelihoods, food security and local value chains. The Monitoring System consists of primary data collected from households on a periodic basis (more or less every four months, depending on seasonality). The FAO conducted the process and data was collected through computer-assisted telephone interviews between 22 September and 31 October 2022. The survey was statistically representative at administative level 1 (province level), the sample covered all 11 provinces of the country. This fourth round survey employed panel data, stratified simple random sample and random digit dialing approaches, reaching 1956 households. Sampling

SAMPLING PROCEDURE
The sample covered all 11 provinces of the country. This fourth round survey employed panel data, stratified simple random sample and random digit dialing approaches, reaching 1 956 households. Of these, approximately 71 percent were panel households re-interviewed from previous rounds. Between 150 and 260 households were sampled per province. Of the total sampled households, 70 percent were agricultural with comparable shares among panel households (77 percent). For more details on the sampling procedure, consult the methodology document attached in the documentations tab.

WEIGHTING
Sampling weights were computed to account for the disproportionate probabilities of the selection of the population per administrative level 1. Population figures at administative level 1, the proportion of agricultural households at admininistrative level 1, access to electricity as a wealth proxy and education levels were used for sampling weights.

DATA EDITING
The datasets have been edited and processed for analysis by the Needs Assessment team at the Office of Emergencies and Resilience, FAO, with some dashboards and visualizations produced. For more information, see https://data-in-emergencies.fao.org/pages/countries.

METHODOLOGY NOTES
The dataset was anonymized using Statistical Disclosure methods by the Data in Emergencies Hub team and reviewed by the Data Dissemination Team of the Statistics division at FAO. All direct identifiers have been removed prior to data submission.

In addition, recoding and local suppressions were applied to ensure data confidentiality. Recoding was especially applied to variables, such as education, marital status, and residence status/type.
