### ABSTRACT

The FAO has developed a monitoring system in 26 food crisis countries to better understand the impacts of various shocks on agricultural livelihoods, food security and local value chains. The Monitoring System consists of primary data collected from households on a periodic basis (more or less every four months, depending on seasonality). The FAO launched a household survey in South Sudan through the DIEM-Monitoring System to monitor agricultural livelihoods and food security. Data were conducted through face-to-face surveys in all ten states of South Sudan: Central Equatoria, Eastern Equatoria, Jonglei, Lakes, Northern Bahr el Ghazal, Unity, Upper Nile, Warrap, Western Bahr el Ghazal and Western Equatoria. A total of 3 090 households were surveyed between 27 May and 29 July 2022. All ten states surpassed the targeted sample size of 270 households per state. However, 17 households were dropped based on data quality issues.

## Sampling

### SAMPLING PROCEDURE

A total of 3 090 households were surveyed. All ten states surpassed the targeted sample size of 270 households per state. However, 17 households were dropped based on data quality issues. The sampling frame was based on the 27th round of the Food Security and Nutrition Monitoring Report of South Sudan in 2021. The lowest administrative unit of measurement in South Sudan is a boma, followed by a payam, a county and then a state, before reaching the national level. The data were collected at boma level and were aggregated in order to be representative at state level. Two-stage sampling was applied – cluster sampling to generate the list of clusters, followed by simple random sampling to ensure that all households in the targeted cluster had an equal chance of being selected. At the second stage, households were selected using simple random sampling.

### WEIGHTING

Regional base weights were computed at administrative level 1 because this was a face-to-face survey.
