ABSTRACT

The study objective was to understand the effectiveness of Engaging Men through Accountable Practice (EMAP), a men-only group-based discussion series which sought to transform gender relations in communities, on intimate partner violence (IPV), gender inequitable attitudes and related outcomes.

A two-armed, matched-pair, cluster randomized controlled trial was conducted between 2016 and 2018 in eastern Democratic Republic of Congo. Adult men (n=1387) and their female partners (n=1220) participated in the study.

The primary outcomes of the study were female report of past year physical and/ or sexual IPV and men's intention to commit violence. Secondary outcomes included men's gender attitudes, women's economic and emotional IPV, women's perception of negative male behaviors and perceived quality of the relationship.

Sample survey data [ssd]

UNIT OF ANALYSIS
- Household
- Individual

Version

VERSION DESCRIPTION
Version 01: Edited, anonymized dataset for public distribution.

VERSION NOTES
Endline survey data

Scope

NOTES
The survey covered the following topics:
• Section A. Information related to the survey
• Section B. Consent
• Section C. Household overview
• Section D. Housing and household assets

• Section E. Income, activities, and savings
• Section F. Decision-making and power dynamics within the household
• Section G. Social norms and the role of women
• Section H. Emotional well-being
• Section I. Quality of the couple's relationship
• Section J. Intimate partner violence
• Section K. Experience of conflict
• Section L. Fertility and reproduction
• Section M. Shocks
• Section N. Groups present in your community
• Section O. Conclusion

Coverage

GEOGRAPHIC COVERAGE
The study sample covers 28 communities across North and South Kivu provinces, DRC.

Sampling

SAMPLING PROCEDURE
A two-armed, matched-pair, cluster randomized controlled trial was conducted between 2016 and 2018 in eastern Democratic Republic of Congo. Adult men (n=1387) and their female partners (n=1220) participated in the study. Sites were elected based on where IRC's women's empowerment programming was operational and were subsequently matched based on sociodemographic characteristics. Within each pair of villages, one site was randomized to either treatment or control arms.
