Sampling

Sampling Procedure

Ghana used a stratified, multistage cluster design.

The sample was stratified by administrative region (Ashanti, Brong Ahafo, Central, Eastern, Greater Accra, Northern, Upper East, Upper West, Volta and Western) and type of locality (urban/rural) resulting in 20 strata and is nationally representative. The Census Enumerated Areas (CEA) of the 2000 Population and Housing Census was used as the sampling frame.

A sample of 251 EAs was selected as the primary sampling units (PSU). One of the selected PSUs was not used. This was because the EA which was expected to be located at Korle Bu Teaching hospital could not be traced. The number of EAs to be selected from each strata was based on proportional allocation (determined by the number of EAs in each strata specified on the census frame). EAs were then selected from each stratum with probability proportional to size; the measure of size being the

number of individuals aged 50 years or more in the EA.

In each selected EA, a listing of the households was conducted to classify each household into the following mutually exclusive categories:

- (1) WHS/SAGE Wave 0 follow-up households with one or more members aged 50 years or more;
- (2) New households with one or more members aged 50 years or more;
- (3) WHS/SAGE Wave 0 follow-up households which did not include any members aged 50 years or more, but included residents aged 18-49; and,
- (4) New households which did not include any members aged 50 years or more, but included residents aged 18-49.

Twenty-four households were randomly selected from each selected EA. All WHS/SAGE Wave 0 follow-up 50-plus households were eligible for the household interview (one household respondent was selected). Twenty such households were selected. If this target number was not reached, then the balance was selected using systematic sampling from the new 50-plus households. All 50+ members of the household were eligible for the individual interview (multiple individual interviews possible in these households).

Stages of selection

Strata: Region, Locality=20

PSU: EAs=235 surveyed

SSU: Households=5269 surveyed

TSU: Individual=5573 surveyed

Deviations from Sample Design

One of the 251 selected PSUs was not used. This was because the EA which was expected to be located at Korle Bu Teaching hospital could not be traced.

Response Rate

Household

Response rate=86%

Cooperation rate=98%

Response rate=80%

Cooperation rate=92%

Weighting

Household weights(variable hhweight) for analysis at household level and individual weights(variable pweight) for analysis at person level were calculated.

These were based on the selection probability at each stage of selection. Household weights were post-stratified by region and locality according to the 2010 household projections.

Individual weights were post-stratified by region, locality, sex and age-groups(18-49, 50-59, 60-69, 70+) according to the

2009 Projected population estimates provided by Stats Ghana.
Weights are not normalised.

Questionnaires

Overview

The questionnaires were based on the WHS Model Questionnaire with some modification and many new additions. A household questionnaire was administered to all households eligible for the study. A Verbal Autopsy questionnaire was administered to households that had a death in the last 24 months. An Individual questionnaire was administered to eligible respondents identified from the household roster. A Proxy questionnaire was administered to individual respondents who had cognitive limitations. The questionnaires were developed in English and were piloted as part of the SAGE pretest in 2005. All documents were translated into three local languages: Akan, Ga and Twi. All SAGE generic questionnaires are available as external resources.

DATA COLLECTION NOTES

The SAGE instrument was pre-tested in 2005 in India, Ghana and Tanzania. Just over 1500 persons were interviewed in total. Fieldworker training workshop was conducted the week of 2 April 2007 in Danfa Health Centre, Accra. Fieldwork teams comprised 8 interviewers, 2 field editors and 1 person for the spirometry and drawing the blood sample. There were 4 teams in total each headed by a supervisor responsible for overall co-ordination and supervision of the team.

Data Processing

Data Editing

Data editing took place at a number of stages including:

- (1) office editing and coding
- (2) during data entry
- (3) structural checking of the CSPro files
- (4) range and consistency secondary edits in Stata

Pre question

In order to determine who to interview, I need to know who lives at this address. Let me assure you that any information you provide is strictly confidential. By asking "who lives at this household?", I mean those who share meals ('eat out of the same cooking pot') and usually stay here for at least four months a year.

I would like to know the age, sex, marital status, educational level and relationship to the household head of each of the members of this household who live here.

Please include people who may presently be in an institution due to their health (for example, in hospital or old people's home) for a short time.

Literal question

What is the total number of people who live in this household?

Post question

We want to start with the person who is the head of the household. By head of the household we mean the main decision maker in the household. The head can be either male or female. If two people are equal decision-makers, take the older person.

Interviewer instructions

INTERVIEWER: Identify and collect information on REINTERVIEW household members first, then address new household members (those who were not part of the household in the previous interview in 2003).

INTERVIEWER: By "new" household member, we mean someone who was not a household member when we interviewed this household in 2002/2003 as part of WHO's World Health Survey.

INTERVIEWER AND SUPERVISOR: For reinterview household members from the WHS, interviewer should determine if person still a HH member in Q0404a (Yes or No) and supervisor/interviewer should insert WHS ID from WHS HH roster in Q0404b. For new household member, circle "9=N/A" for Q0404a and use "9 8" in Q0404b.

INTERVIEWER: remember to include people who may presently be in an institution for a short time due to their health.

INTERVIEWER: if Q0404a=2 then skip to Q0415

Pre question

In order to determine who to interview, I need to know who lives at this address. Let me assure you that any information you provide is strictly confidential. By asking "who lives at this household?", I mean those who share meals ('eat out of the same cooking pot') and usually stay here for at least four months a year.
 I would like to know the age, sex, marital status, educational level and relationship to the household head of each of the members of this household who live here.

Please include people who may presently be in an institution due to their health (for example, in hospital or old people's home) for a short time.

Literal question

What is the total number of people who live in this household?

Post question

We want to start with the person who is the head of the household. By head of the household we mean the main decision maker in the household. The head can be either male or female. If two people are equal decision-makers, take the older person.

INTERVIEWER: By "new" household member, we mean someone who was not a household member when we interviewed this household in 2002/2003 as part of WHO's World Health Survey.

INTERVIEWER AND SUPERVISOR: For reinterview household members from the WHS, interviewer should determine if person still a HH member in Q0404a (Yes or No) and supervisor/interviewer should insert WHS ID from WHS HH roster in Q0404b. For new household member, circle "9=N/A" for Q0404a and use "9 8" in Q0404b.

INTERVIEWER: remember to include people who may presently be in an institution for a short time due to their health.

INTERVIEWER: if Q0404a=2 then skip to Q0415

The next questions are about your family and friends, specifically those not living with you in this household. Families and friends sometimes help one another in a variety of different ways, and each type of help or support can be important. Part of our survey involves finding out how they do that. We would now like to ask some questions about your family and friends who do not live with you, and the different ways in which you help or support each other. The next questions are about help received by your household in the last 12 months.

I would like to ask you some questions about how much your household and all its members spends on food, household items, health services and other things. Expenditures can be monetary or in-kind. The value of in-kind payments and items produced or raised, and consumed, by the household need to be estimated and included. We ask about different time periods, so please listen carefully to the time frame.

For all questions in this section report all values in local currency, whether paid in cash or in kind.

I would like to start by asking about household expenses over the last 7 days. The next questions are about food items purchased by the household. I would like to start with asking details about the types of food your household has purchased in cash or kind and/or self-produced goods consumed in the last 7 days.

Pre question

This next section will require additional concentration. I will read to you some stories about people with varying levels of difficulties in different areas of health. I want you to think about these people's experiences as if they were your own. Once I have finished reading each story, I will ask you to rate what happened in the story.

I would like to know how you view each story and rate how much of a problem or difficulty the person described has in that area of health in the same way that you described your own health to me earlier. While giving the rating, think of the person in the story as someone who is of your age and background.

Pre question

This next section will require additional concentration. I will read to you some stories about people with varying levels of difficulties in different areas of health. I want you to think about these people's experiences as if they were your own. Once I have finished reading each story, I will ask you to rate what happened in the story.

I would like to know how you view each story and rate how much of a problem or difficulty the person described has in that area of health in the same way that you described your own health to me earlier. While giving the rating, think of the person in the story as someone who is of your age and background.

Pre question

This next section will require additional concentration. I will read to you some stories about people with varying levels of difficulties in different areas of health. I want you to think about these people's experiences as if they were your own. Once I have finished reading each story, I will ask you to rate what happened in the story.

I would like to know how you view each story and rate how much of a problem or difficulty the person described has in that area of health in the same way that you described your own health to me earlier. While giving the rating, think of the person in the story as someone who is of your age and background.

[Anne] takes twice as long as others to put on and take off clothes, but needs no help with this. Although it requires an effort, she is able to bathe and groom herself, though less frequently than before. She does not require help with feeding.

Description

Before we ask you more questions, this time about your own health and well-being, we would like to measure a few things, like your blood pressure, your weight and height. We'll also ask you to participate in a few tests to determine your health status.

Pre question

First I would like to measure your blood pressure and pulse rate. Stay seated, and once I put this on your wrist keep it steady and at the level of your heart. We will need to take the blood pressure reading three times. It will squeeze your wrist a bit, but won't hurt. Relax.

INTERVIEWER: respondent should remain seated. Demonstrate to the respondent how to hold their arm while the machine is measuring. Place the monitoring device on the wrist and have the respondent hold it at heart level against his/her chest. When the device is in the correct position and respondent is relaxed, press the button to start. Check to make sure it is working. Collect the blood pressure and pulse 3 times with one minute between each measurement. You do not need to remove the device between measurements.

Description

We are now going to test your distance vision and near vision.

Pre question

To measure acuity in the left eye, the right eye is covered with right palm or an eye patch and the subject is asked to respond to each "E" in a row slowly, row by row, with your guidance. Only one reading of a given "E" is allowed. When the subject has difficulty, he or she is encouraged to guess. Responses can be verbal (Up, Down, Left, Right) or the respondent can indicate with a finger like in the training video.

The right eye can then be tested in the same way. Visual acuity in each eye can be recorded as explained in the Interviewers Manual.

Literal question

Distance Vision - Left Eye

Interviewer instructions

INTERVIEWER: Invite the respondent to sit again - in a chair positioned so that the respondent's head will be 4 meters from the eye chart. Make sure the person does not lean in closer to the chart during the test.

Distance vision

INTERVIEWER: Start with the distance vision chart - using the 4 metres measured out for the timed walk. If the respondent makes more than 2 errors in one row, and reads all letters in the row, their result is read as the previous row. Select and record the result from the column labeled "DECIMAL" on the left side of the chart.

Pre question

Next I am going to ask you about the time you spend doing different types of physical activity in a typical week. Please answer these questions even if you do not consider yourself to be an active person. Think first about the time you spend doing work. Think of work as the things that you have to do such as paid or unpaid work, household chores, harvesting food/crops, fishing or hunting for food, providing care or seeking employment.

In answering the following questions 'vigorous activities' require hard physical effort and cause large increases in breathing or heart rate, 'moderate activities' require moderate physical effort and cause small increases in breathing or heart rate.

Literal question

Does your work involve vigorous-intensity activity that causes large increases in breathing or heart rate, [like heavy lifting, digging or chopping wood] for at least 10 minutes continuously?

Pre question

Now I would like to ask you questions about what you did yesterday. I want you to try to remember the sequence of activities that you did from when you woke up until later in the day. We'll go through this one activity at a time.

People do different activities throughout the day. Here is a list of examples: working, preparing food, doing housework, watching children, traveling to work or the market, grooming, bathing, eating, exercising, praying, resting, chatting with friends, playing cards, watching TV, listening to the radio, reading the newspaper or taking care of someone.

I would like for you to tell me about all the different things that you did yesterday. You may have done some of the things that I just mentioned. You may have done other things too.

Please keep all of your responses to just a word or two. And you don't have to mention very short activities, like washing hands, which only take one or two minutes. We'll start at the beginning.

Literal question

Were you talking or interacting with anyone when you did this? By interacting with, I mean were you consistently paying attention to someone. For example, if you were bathing a young child you would be interacting with them even if you were not talking. On the other hand, talking to someone for less than 5 minutes does not count as interacting.

Pre question

Now I would like to ask you questions about what you did yesterday. I want you to try to remember the sequence of activities that you did from about noon or mid-day until later in the day. We'll go through this one activity at a time.

People do different activities throughout the day. Here is a list of examples: working, preparing food, doing housework, watching children, traveling to work or the market, grooming, bathing, eating, exercising, praying, resting, chatting with friends, playing cards, watching TV, listening to the radio, reading the newspaper or taking care of someone.

I would like for you to tell me about all the different things that you did yesterday. You may have done some of the things that I just mentioned. You may have done other things too.

Please keep all of your responses to just a word or two. And you don't have to mention very short activities, like washing hands, which only take one or two minutes. We'll start at the beginning.

Literal question

When did you wake up yesterday?

Interviewer instructions

INTERVIEWER: For this module, you will ask the respondent to reconstruct his or her previous day beginning from evening (about 18.00 or 6pm) until the respondent goes to bed for the night. You will not be able to reconstruct the entire day. You should limit this section to 15 minutes of interview time, so keep track of time elapsed, using the spaces provided in this section - and stop asking about activities to leave enough time to ask Q7501-7534 in the allotted time.

Pre question

Now I would like to ask you questions about what you did yesterday. I want you to try to remember the sequence of activities that you did in the evening, from about 6pm (18.00 or early evening), until you went to bed. We'll go through this one activity at a time.

People do different activities throughout the day. Here is a list of examples: working, preparing food, doing housework, watching children, traveling to work or the market, grooming, bathing, eating, exercising, praying, resting, chatting with friends, playing cards, watching TV, listening to the radio, reading the newspaper or taking care of someone.

I would like for you to tell me about all the different things that you did yesterday. You may have done some of the things that I just mentioned. You may have done other things too.

Please keep all of your responses to just a word or two. And you don't have to mention very short activities, like washing hands, which only take one or two minutes.

Literal question

Were you talking or interacting with anyone when you did this? By interacting with, I mean were you consistently paying attention to someone. For example, if you were bathing a young child you would be interacting with them even if you were not talking. On the other hand, talking to someone for less than 5 minutes does not count as interacting

Pre question

Please tell me the main things that you did yesterday morning from the time you woke up until around noon/mid-day. Please also mention if you were talking or interacting with anyone for any parts of the morning. By interacting with, I mean were you consistently paying attention to someone. For example, if you were bathing a young child you would be interacting with them even if you were not talking. On the other hand, talking to someone for less than 5 minutes does not count as interacting.

Be sure to cover as much as you can remember. You don't have to go in order, but it's probably easier that way. Be sure to stop with activities from around noon/mid-day.

Interviewer instructions

INTERVIEWER: Please note for Q7015 and Q7016, Q7050 and Q7051, Q7100 and Q7101 :
 Circle all activities that the person spontaneously mentions.

You do not need to record the order and you do not need to record an item that is repeated.

This does not have to be comprehensive. It is just meant to be an approximation.

Please also circle all people that they say they were with.

If the person takes more than two minutes to tell you about their morning, you should ask them to give you less detail.

Pre question

Please tell me the main things that you did yesterday morning from the time you woke up until around noon/mid-day. Please also mention if you were talking or interacting with anyone for any parts of the morning. By interacting with, I mean were you consistently paying attention to someone. For example, if you were bathing a young child you would be interacting with them even if you were not talking. On the other hand, talking to someone for less than 5 minutes does not count as interacting.

Be sure to cover as much as you can remember. You don't have to go in order, but it's probably easier that way. Be sure to stop with activities from around noon/mid-day.

Pre question

In the following questions, we want to find out about how families and households cope and support each other through prolonged illnesses and death. I would like to spend some time talking to you about people in your household, adults and/or children, who have been ill or died in the last 12 months.

I will ask you a few questions about people in your household who need/needed care, due to illness or other reasons, or have been ill and died in the last 12 months. I would like to know more about any adult and any children and their caregiver in the household. The information you provide will be kept strictly confidential and will be used to improve programs for families and children in need. It is possible that you may feel uncomfortable answering some of the questions. You can choose if you don't want to answer some questions.

I acknowledge that there are many conditions, illnesses and situations that require household members to provide care for other household members. But I will start with a question about a specific condition which often creates a high need for care.

Q8002: Caregiving? (q8002)

File: GhanaINDData

Overview

Type: Discrete
 Format: numeric
 Width: 14
 Decimals: 0
 Range: 1-9

Valid cases: 0

Pre question

People who are seriously ill usually need to be given care and assistance. This includes both daily personal care such as help with eating, dressing, bathing, moving around in the house as well as assistance with their affairs outside the house such as transportation to see doctors, going to buy medicine, or managing the ill person's financial situation, health care, emotional well-being or other personal affairs. I want to know who in your household has needed care or support and what level they needed.

Literal question

Over the last 12 months, have any members of your household, adults or children, needed care or support for any reason? This could include financial, physical, emotional, health or personal care or support.***
