Sampling

Sampling Procedure

The People's Republic of China (PRC) administers 22 provinces. These were grouped into Eastern, Central and Western provinces based on geographical location and economic status. PRC used a stratified multistage cluster sample design. Eight provinces were sampled. Strata were defined by the eight province (Guangdong, Hubei, Jilin, Shaanxi, Shandong, Shanghai, Yunnan, Zhejiang) and locality (urban or rural), there were 16 strata in total.

One district (urban) and one county (rural) was randomly selected from each province.

From each district/county 4 communities/townships were selected probability proportional to size; the measure of size being the number of households in the community/township.

From each community/township 2 residential blocks/villages were selected probability proportional to size; the measure of size being the number of households in the residential blocks/villages.

In each selected residential block/village 84 households were randomly selected: 70 50 plus households and 14 18-49 households.

All 50 plus members of the 50 plus households were eligible for the individual interview. One person aged 18-49 was eligible for the individual interview, and the individual to be included was selected using a Kish Grid.

Stages of selection

Strata: Province, Locality=16

PSU: Township/Community=64 surveyed

SSU: Village/Neighbourhood Community=127 surveyed

TSU: Households=10278 surveyed

QSU: Individuals=15050 surveyed

Response Rate

Response rate=93%

Cooperation rate=98%

Weighting

Household weights for analysis at household level and individual weights for analysis at person level were calculated. These were based on the selection probability at each stage of selection. Household weights are post-stratified by province and locality according to the 2008 household projections provided by China CDC and weight up to the total number of households in the eight provinces. Individual weights are post-stratified by province, sex and age groups (18-49, 50-59, 60-69, 70+) according to the 2008 population projections provided by China CDC and weight up to the total number of persons aged 18+. A second set of household and individual weights are available which are post stratified to weight up to the entire household and 18+ populations respectively in the PRC (nationally representative of these populations). Hong Kong and Macau are excluded from national totals. Weights are not normalized

Questionnaires

Overview

The questionnaires were based on the WHS Model Questionnaire with some modification and many new additions. A household questionnaire was administered to all households eligible for the study. An Individual questionnaire was administered to eligible respondents identified from the household roster. A Proxy questionnaire was administered to individual respondents who had cognitive limitations. The questionnaires were developed in English and were piloted as part of the SAGE pretest in 2005. All documents were translated into Chinese. All SAGE generic questionnaires are available as external resources.

DATA COLLECTION NOTES

The SAGE instrument was pre-tested in 2005 in India, Ghana and Tanzania. Just over 1500 persons were interviewed in total. National Fieldworker training workshop was conducted the week of 3 March 2007 in HangZhou. Fieldwork teams comprised 5-6 interviewers, 2-3 persons for the health measurements and drawing the blood sample, 1 field editor, 1 field guide and 1 supervisor. There were 16 teams in total, one for each survey site, each headed by a supervisor responsible for overall co-ordination and supervision of the team. Data collection took place in two phases. In the first phase data was collected from 5 provinces: Guangdong, Hubei, Jilin, Shaanxi, Zhejiang using paper and pencil face to face interviews. In the second phase data was collected from Shanghai, Shandong and Yunnan using computer-assisted face-to-face interviews.

Pre question

In order to determine who to interview, I need to know who lives at this address. Let me assure you that any information you provide is strictly confidential. By asking "who lives at this household?", I mean those who share meals ('eat out of the same cooking pot') and usually stay here for at least four months a year.
 I would like to know the age, sex, marital status, educational level and relationship to the household head of each of the members of this household who live here.

Please include people who may presently be in an institution due to their health (for example, in hospital or old people's home) for a short time.

Literal question

What is the total number of people who live in this household?

Post question

We want to start with the person who is the head of the household. By head of the household we mean the main decision maker in the household. The head can be either male or female. If two people are equal decision-makers, take the older person.

INTERVIEWER: Identify and collect information on REINTERVIEW household members first, then address new household members (those who were not part of the household in the previous interview in 2003).

INTERVIEWER: By "new" household member, we mean someone who was not a household member when we interviewed this household in 2002/2003 as part of WHO's World Health Survey.

INTERVIEWER AND SUPERVISOR: For reinterview household members from the WHS, interviewer should determine if person still a HH member in Q0404a (Yes or No) and supervisor/interviewer should insert WHS ID from WHS HH roster in Q0404b. For new household member, circle "9=N/A" for Q0404a and use "9 8" in Q0404b.

INTERVIEWER: remember to include people who may presently be in an institution for a short time due to their health.

We want to start with the person who is the head of the household. By head of the household we mean the main decision maker in the household. The head can be either male or female. If two people are equal decision-makers, take the older person.

Interviewer instructions

INTERVIEWER: Identify and collect information on REINTERVIEW household members first, then address new household members (those who were not part of the household in the previous interview in 2003).

INTERVIEWER: By "new" household member, we mean someone who was not a household member when we interviewed this household in 2002/2003 as part of WHO's World Health Survey.

INTERVIEWER AND SUPERVISOR: For reinterview household members from the WHS, interviewer should determine if person still a HH member in Q0404a (Yes or No) and supervisor/interviewer should insert WHS ID from WHS HH roster in Q0404b. For new household member, circle "9=N/A" for Q0404a and use "9 8" in Q0404b.

INTERVIEWER: remember to include people who may presently be in an institution for a short time due to their health.

INTERVIEWER: if Q0404a=2 then skip to Q0415

Pre question

In order to determine who to interview, I need to know who lives at this address. Let me assure you that any information you provide is strictly confidential. By asking "who lives at this household?", I mean those who share meals ('eat out of the same cooking pot') and usually stay here for at least four months a year.

I would like to know the age, sex, marital status, educational level and relationship to the household head of each of the members of this household who live here.

Please include people who may presently be in an institution due to their health (for example, in hospital or old people's home) for a short time.

Literal question

What is the total number of people who live in this household?

Interviewer instructions

INTERVIEWER: Identify and collect information on REINTERVIEW household members first, then address new household members (those who were not part of the household in the previous interview in 2003).

INTERVIEWER: By "new" household member, we mean someone who was not a household member when we interviewed this household in 2002/2003 as part of WHO's World Health Survey.

INTERVIEWER AND SUPERVISOR: For reinterview household members from the WHS, interviewer should determine if person still a HH member in Q0404a (Yes or No) and supervisor/interviewer should insert WHS ID from WHS HH roster in Q0404b. For new household member, circle "9=N/A" for Q0404a and use "9 8" in Q0404b.

INTERVIEWER: remember to include people who may presently be in an institution for a short time due to their health.

INTERVIEWER: if Q0404a=2 then skip to Q0415

Pre question

This next section will require additional concentration. I will read to you some stories about people with varying levels of difficulties in different areas of health. I want you to think about these people's experiences as if they were your own. Once I have finished reading each story, I will ask you to rate what happened in the story.

I would like to know how you view each story and rate how much of a problem or difficulty the person described has in that area of health in the same way that you described your own health to me earlier. While giving the rating, think of the person in the story as someone who is of your age and background.

Pre question

This next section will require additional concentration. I will read to you some stories about people with varying levels of difficulties in different areas of health. I want you to think about these people's experiences as if they were your own. Once I have finished reading each story, I will ask you to rate what happened in the story.

I would like to know how you view each story and rate how much of a problem or difficulty the person described has in that area of health in the same way that you described your own health to me earlier. While giving the rating, think of the person in the story as someone who is of your age and background.

[Anne] takes twice as long as others to put on and take off clothes, but needs no help with this. Although it requires an effort, she is able to bathe and groom herself, though less frequently than before. She does not require help with feeding.

Description

Before we ask you more questions, this time about your own health and well-being, we would like to measure a few things, like your blood pressure, your weight and height. We'll also ask you to participate in a few tests to determine your health status.

Pre question

First I would like to measure your blood pressure and pulse rate. Stay seated, and once I put this on your wrist keep it steady and at the level of your heart. We will need to take the blood pressure reading three times. It will squeeze your wrist a bit, but won't hurt. Relax.

INTERVIEWER: respondent should remain seated. Demonstrate to the respondent how to hold their arm while the machine is measuring. Place the monitoring device on the wrist and have the respondent hold it at heart level against his/her chest. When the device is in the correct position and respondent is relaxed, press the button to start. Check to make sure it is working. Collect the blood pressure and pulse 3 times with one minute between each measurement. You do not need to remove the device between measurements.

Description

We are now going to test your distance vision and near vision.

Pre question

To measure acuity in the left eye, the right eye is covered with right palm or an eye patch and the subject is asked to respond to each "E" in a row slowly, row by row, with your guidance. Only one reading of a given "E" is allowed. When the subject has difficulty, he or she is encouraged to guess. Responses can be verbal (Up, Down, Left, Right) or the respondent can indicate with a finger like in the training video.

The right eye can then be tested in the same way. Visual acuity in each eye can be recorded as explained in the Interviewers Manual.

Literal question

Distance Vision - Left Eye

Interviewer instructions

INTERVIEWER: Invite the respondent to sit again - in a chair positioned so that the respondent's head will be 4 meters from the eye chart. Make sure the person does not lean in closer to the chart during the test.

Distance vision

INTERVIEWER: Start with the distance vision chart - using the 4 metres measured out for the timed walk. If the respondent makes more than 2 errors in one row, and reads all letters in the row, their result is read as the previous row. Select and record the result from the column labeled "DECIMAL" on the left side of the chart.

Pre question

Now I would like to ask you questions about what you did yesterday. I want you to try to remember the sequence of activities that you did from when you woke up until later in the day. We'll go through this one activity at a time.

People do different activities throughout the day. Here is a list of examples: working, preparing food, doing housework, watching children, traveling to work or the market, grooming, bathing, eating, exercising, praying, resting, chatting with friends, playing cards, watching TV, listening to the radio, reading the newspaper or taking care of someone.

I would like for you to tell me about all the different things that you did yesterday. You may have done some of the things that I just mentioned. You may have done other things too.

Please keep all of your responses to just a word or two. And you don't have to mention very short activities, like washing hands, which only take one or two minutes. We'll start at the beginning.

File: ChinaINDData

Overview

Type: Discrete
 Format: numeric
 Width: 8
 Decimals: 0

Valid cases: 0
 Invalid: 0

Literal question

Were you talking or interacting with anyone when you did this? By interacting with, I mean were you consistently paying attention to someone. For example, if you were bathing a young child you would be interacting with them even if you were not talking. On the other hand, talking to someone for less than 5 minutes does not count as interacting.

Pre question

Now I would like to ask you questions about what you did yesterday. I want you to try to remember the sequence of activities that you did from about noon or mid-day until later in the day. We'll go through this one activity at a time.

People do different activities throughout the day. Here is a list of examples: working, preparing food, doing housework, watching children, traveling to work or the market, grooming, bathing, eating, exercising, praying, resting, chatting with friends, playing cards, watching TV, listening to the radio, reading the newspaper or taking care of someone.

I would like for you to tell me about all the different things that you did yesterday. You may have done some of the things that I just mentioned. You may have done other things too.

Please keep all of your responses to just a word or two. And you don't have to mention very short activities, like washing hands, which only take one or two minutes. We'll start at the beginning.

Literal question

When did you wake up yesterday?

Post question

Interviewer instructions

INTERVIEWER: For this module, you will ask the respondent to reconstruct his or her previous day beginning from evening (about 18.00 or 6pm) until the respondent goes to bed for the night. You will not be able to reconstruct the entire day. You should limit this section to 15 minutes of interview time, so keep track of time elapsed, using the spaces provided in this section - and stop asking about activities to leave enough time to ask Q7501-7534 in the allotted time.

Pre question

Now I would like to ask you questions about what you did yesterday. I want you to try to remember the sequence of activities that you did in the evening, from about 6pm (18.00 or early evening), until you went to bed. We'll go through this one activity at a time.

People do different activities throughout the day. Here is a list of examples: working, preparing food, doing housework, watching children, traveling to work or the market, grooming, bathing, eating, exercising, praying, resting, chatting with friends, playing cards, watching TV, listening to the radio, reading the newspaper or taking care of someone.

I would like for you to tell me about all the different things that you did yesterday. You may have done some of the things that I just mentioned. You may have done other things too.

Please keep all of your responses to just a word or two. And you don't have to mention very short activities, like washing hands, which only take one or two minutes.

Q7018: Talking with (single) (cq7018_7)

File: ChinaINDData

Were you talking or interacting with anyone when you did this? By interacting with, I mean were you consistently paying attention to someone. For example, if you were bathing a young child you would be interacting with them even if you were not talking. On the other hand, talking to someone for less than 5 minutes does not count as interacting

Pre question

Please tell me the main things that you did yesterday morning from the time you woke up until around noon/mid-day. Please also mention if you were talking or interacting with anyone for any parts of the morning. By interacting with, I mean were you consistently paying attention to someone. For example, if you were bathing a young child you would be interacting with them even if you were not talking. On the other hand, talking to someone for less than 5 minutes does not count as interacting.

Be sure to cover as much as you can remember. You don't have to go in order, but it's probably easier that way. Be sure to stop with activities from around noon/mid-day.

Interviewer instructions

INTERVIEWER: Please note for Q7015 and Q7016, Q7050 and Q7051, Q7100 and Q7101 :
 Circle all activities that the person spontaneously mentions.

You do not need to record the order and you do not need to record an item that is repeated.

This does not have to be comprehensive. It is just meant to be an approximation.

Please also circle all people that they say they were with.

If the person takes more than two minutes to tell you about their morning, you should ask them to give you less detail.

Q7015: Activity (Morning) (dq7015_22)

File: ChinaINDData

Overview

Type: Discrete
 Format: numeric
 Width: 8
 Decimals: 0

Valid cases: 0
 Invalid: 0

Pre question

Please tell me the main things that you did yesterday morning from the time you woke up until around noon/mid-day. Please also mention if you were talking or interacting with anyone for any parts of the morning. By interacting with, I mean were you consistently paying attention to someone. For example, if you were bathing a young child you would be interacting with them even if you were not talking. On the other hand, talking to someone for less than 5 minutes does not count as interacting.

Be sure to cover as much as you can remember. You don't have to go in order, but it's probably easier that way. Be sure to stop with activities from around noon/mid-day.
